

# Package ‘motifStack’

October 16, 2018

**Type** Package

**Version** 1.24.1

**Title** Plot stacked logos for single or multiple DNA, RNA and amino acid sequence

**Author** Jianhong Ou, Michael Brodsky, Scot Wolfe and Lihua Julie Zhu

**Maintainer** Jianhong Ou <jianhong.ou@duke.edu>

**Imports** XML, scales, htmlwidgets, grDevices, stats, stats4, graphics, utils

**Depends** R (>= 2.15.1), methods, grImport, grid, MotIV, ade4, Biostrings

**Suggests** RUnit, BiocGenerics, MotifDb, RColorBrewer, BiocStyle, knitr

**biocViews** SequenceMatching, Visualization, Sequencing, Microarray, Alignment, ChIPchip, ChIPSeq, MotifAnnotation, DataImport

**Description** The motifStack package is designed for graphic representation of multiple motifs with different similarity scores. It works with both DNA/RNA sequence motif and amino acid sequence motif. In addition, it provides the flexibility for users to customize the graphic parameters such as the font type and symbol colors.

**License** GPL (>= 2)

**Lazyload** yes

**VignetteBuilder** knitr

**git\_url** <https://git.bioconductor.org/packages/motifStack>

**git\_branch** RELEASE\_3\_7

**git\_last\_commit** 78c9b2c

**git\_last\_commit\_date** 2018-07-20

**Date/Publication** 2018-10-15

<b>motifStack-package</b>	<i>Plot stacked logos for single or multiple DNA, RNA and amino acid sequence</i>
---------------------------	---

---

**Description**

motifStack is a package that is able to draw amino acid sequence as easy as to draw DNA/RNA sequence. motifStack provides the flexibility for users to select the font type and symbol colors. motifStack is designed for graphical representation of multiple motifs.

**Author(s)**

Jianhong Ou and Lihua Julie Zhu

Maintainer: Jianhong Ou <jianhong.ou@umassmed.edu>

---

<code>browseMotifs</code>	<i>browse motifs</i>
---------------------------	----------------------

---

## Description

browse motifs in a web browser

## Usage

```
browseMotifs(pfms, phylog,
            layout=c("tree", "cluster", "radialPhylog"),
            nodeRadius=2.5, baseWidth=12, baseHeight=30,
            xaxis=TRUE, yaxis=TRUE,
            width=NULL, height=NULL,
            ...)
```

## Arguments

<code>pfms</code>	a list of <code>pfm</code>
<code>phylog</code>	layout type. see <a href="#">GraphvizLayouts</a>
<code>layout</code>	layout type. Could be tree, cluster or radialPhylog.
<code>nodeRadius</code>	node radius, default 2.5px.
<code>baseWidth,baseHeight</code>	width and height of each alphabet of the motif logo.
<code>xaxis,yaxis</code>	plot x-axis or y-axis or not in the motifs.
<code>width</code>	width of the figure
<code>height</code>	height of the figure
<code>...</code>	parameters not used

## Value

An object of class `htmlwidget` that will intelligently print itself into HTML in a variety of contexts including the R console, within R Markdown documents, and within Shiny output bindings.

## Examples

```
library("MotifDb")
matrix.fly <- query(MotifDb, "Dmelanogaster")
motifs <- as.list(matrix.fly)
motifs <- motifs[grep1("Dmelanogaster-FlyFactorSurvey-", names(motifs), fixed=TRUE)]
names(motifs) <- gsub("Dmelanogaster_FlyFactorSurvey_", "", ,
                      gsub("_FBgn[0-9]+$", "", ,
                            gsub("[^a-zA-Z0-9]", "_",
                                  gsub("(_[0-9]+)$", "", names(motifs))))))
motifs <- motifs[unique(names(motifs))]
pfms <- sample(motifs, 10)
pfms <- lapply(names(pfms), function(.ele, pfms){new("pfm", mat=pfms[[.ele]], name=.ele)}, pfms)
browseMotifs(pfms)
```

**browseMotifs-shiny** *Shiny bindings for browseMotifs*

## Description

Output and render functions for using `browseMotifs` within Shiny applications and interactive Rmd documents.

## Usage

```
browseMotifsOutput(outputId, width = "100%", height = "400px")
renderbrowseMotifs(expr, env = parent.frame(), quoted = FALSE)
```

## Arguments

<code>outputId</code>	output variable to read from
<code>width, height</code>	Must be a valid CSS unit (like '100%', '400px', 'auto') or a number, which will be coerced to a string and have 'px' appended.
<code>expr</code>	An expression that generates a <code>browseMotifs</code>
<code>env</code>	The environment in which to evaluate <code>expr</code> .
<code>quoted</code>	Is <code>expr</code> a quoted expression (with <code>quote()</code> )? This is useful if you want to save an expression in a variable.

**colorset** *retrieve color setting for logo*

## Description

retrieve color setting for logo

## Usage

```
colorset(alphabet="DNA", colorScheme='auto')
```

## Arguments

<code>alphabet</code>	character, 'DNA', 'RNA' or 'AA'
<code>colorScheme</code>	'auto', 'charge', 'chemistry', 'classic' or 'hydrophobicity' for AA, 'auto', 'base-pairing', or 'blindnessSafe' for DNA ro RNA

## Value

A character vector of color scheme

## Examples

```
col <- colorset("AA", "hydrophobicity")
```

**DNAmotifAlignment**      *align DNA motifs*

### Description

### Usage

```
DNAmotifAlignment(pfms, threshold=0.4, minimalConsensus=0,
                  rcpostfix="(RC)", revcomp=rep(TRUE, length(pfms)))
```

### Arguments

pfms	a list of position frequency matrices, pfms must be a list of class pfm or psam
threshold	information content cutoff threshold for useful postions
minimalConsensus	minimal length of consensus for alignment
rcpostfix	the postfix for reverse complements
revcomp	a logical vector to indicates whether the reverse complemet should be involved into alignment

### Value

a list of aligned motifs

### Examples

```
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"),"pcm$")
motifs<-lapply(pcms,pcm2pfm)
motifs<-DNAmotifAlignment(motifs)
```

**getRankedUniqueMotifs** *get the unique motif in each category grouped by distance*

### Description

to get the unique motif in a given category, eg by species.

### Usage

```
getRankedUniqueMotifs(phylog, attr)
```

### Arguments

phylog	an object of class phylog
attr	attribute used for category of motifs

**Value**

return a list:

<code>uni.rank</code>	unique motif ranks
<code>uni.length</code>	length of unique motif grouped by distance
<code>uni.list</code>	unique motif names grouped by distance

**Author(s)**

Jianhong Ou

**Examples**

```
if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")
  matrix.human <- query(MotifDb, "Hsapiens")
  pfms <- c(as.list(matrix.fly), as.list(matrix.human))
  pfms <- pfms[sample(1:length(pfms), 100)]
  jaspar.scores <- MotIV::readDBScores(file.path(find.package("MotIV"),
    "extdata", "jaspar2010_PCC_SWU.scores"))
  d <- MotIV::motifDistances(lapply(pfms, pfm2pwm))
  hc <- MotIV::motifHclust(d, method="average")
  phylog <- hclust2phylog(hc)
  leaves <- names(phylog$leaves)
  attr <- gsub("(.*?)_.*$", "\1", leaves)
  getRankedUniqueMotifs(phylog, attr)
}
```

<code>highlightCol</code>	<i>add alpha transparency value to a color</i>
---------------------------	--

**Description**

An alpha transparency value can be specified to a color, in order to get better color for background.

**Usage**

```
highlightCol(col, alpha = 0.5)
```

**Arguments**

<code>col</code>	vector of any of the three kinds of R color specifications, i.e., either a color name (as listed by <a href="#">colors()</a> ), a hexadecimal string of the form "#rrggbb" or "#rrggbbbaa" (see <a href="#">rgb</a> ), or a positive integer i meaning <a href="#">palette()</a> [i].
<code>alpha</code>	a value in [0, 1]

**Value**

a vector of colors in hexadecimal string of the form "#rrggbbbaa".

*importMatrix*

7

### Author(s)

Jianhong Ou

### Examples

```
highlightCol(1:5, 0.3)
highlightCol(c("red", "green", "blue"), 0.3)
```

---

**importMatrix**

*import motifs from local files*

---

### Description

Import the motifs into [pcm-class](#) or [pfm-class](#) from files exported from Transfac, CisBP, and JAS-PAR.

### Usage

```
importMatrix(filenames,
             format=c("auto", "pfm", "cm", "pcm", "meme",
                     "transfac", "jaspar", "scpd", "cisbp",
                     "psam"),
             to=c("auto", "pcm", "pfm", "psam"))
```

### Arguments

filenames	filename to be imported.
format	file format
to	import to <a href="#">pcm-class</a> or <a href="#">pfm-class</a>

### Value

a list of object [pcm-class](#) or [pfm-class](#)

### Author(s)

Jianhong Ou

### Examples

```
path <- system.file("extdata", package = "motifStack")
importMatrix(dir(path, "*.pcm", full.names = TRUE))
```

mergeMotifs	<i>merge multiple motifs</i>
-------------	------------------------------

## Description

merge multiple motifs by calculate mean of each position

## Usage

```
mergeMotifs(..., bgNoise=NA)
```

## Arguments

...	pcm or pfm objects
bgNoise	if it is not NA, test will using a background by Dirichlet(1)-distributed random frequencies with weight bg.noise. The value of bgNoise should be a number in the range of 0 to 1, eg. 0.05

## Value

a pfm object

## Author(s)

Jianhong Ou

## Examples

```
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"),"pcm$")
mergeMotifs(pcms)
```

motifCircos	<i>plot sequence logo stacks with a radial phylogenetic tree and multiple color rings</i>
-------------	---

## Description

plot sequence logo stacks with a radial phylogenetic tree and multiple color rings. The difference from plotMotifStackWithRadialPhylog is that it has more color setting and one more group of pfms.

## Usage

```
motifCircos(phylog, pfms=NULL, pfms2=NULL, R=2.5,
            r.tree=1, col.tree.bg=NULL, col.tree.bg.alpha=1,
            cnodes=0, labels.nodes=names(phylog$nodes), clabel.nodes=0,
            r.leaves=NA,
            cleaves=1, labels.leaves=names(phylog$leaves), clabel.leaves=1,
            col.leaves=rep("black", length(labels.leaves)),
            col.leaves.bg=NULL, col.leaves.bg.alpha=1,
            r.pfms=NA, r.pfms2=NA,
```

```
r.rings=0, col.rings=list(),
col.inner.label.circle=NULL, inner.label.circle.width=0.02,
col.outer.label.circle=NULL, outer.label.circle.width=0.02,
draw.box=FALSE,
clockwise =FALSE, init.angle=if(clockwise) 90 else 0,
angle=360, pfmNameSpliter=";", rc postfix="(RC)",
motifScale=c("linear","logarithmic","none"), ic.scale=TRUE,
plotIndex=FALSE, IndexCol="black", IndexCex=.8,
groupDistance=NA, groupDistanceLineCol="red",
plotAxis=FALSE)
```

**Arguments**

phylog	an object of class phylog
pfms	a list of objects of class pfm
pfms2	a list of objects of class pfm
R	radius of canvas
r.tree	half width of the tree
col.tree.bg	a vector of colors for tree background
col.tree.bg.alpha	a alpha value [0, 1] of colors for tree background
cnodes	a character size for plotting the points that represent the nodes, used with par("cex")*cnodes. If zero, no points are drawn
labels.nodes	a vector of strings of characters for the nodes labels
clabel.nodes	a character size for the nodes labels, used with par("cex")*clabel.nodes. If zero, no nodes labels are drawn
r.leaves	width of the leaves
cleaves	a character size for plotting the points that represent the leaves, used with par("cex")*cleaves. If zero, no points are drawn
labels.leaves	a vector of strings of characters for the leaves labels
clabel.leaves	a character size for the leaves labels, used with par("cex")*clavel.leaves
col.leaves	a vector of colors for leaves labels
col.leaves.bg	a vector of colors for background of leaves labels
col.leaves.bg.alpha	alpha value [0, 1] for the colors of backgroud of leaves labels
r.pfms	width of the pfms
r.pfms2	width of the pfms2
r.rings	a vector of width of color rings
col.rings	a list of color rings
col.inner.label.circle	a vector of colors for inner cirlece of pfms
inner.label.circle.width	width for inner circle of pfms
col.outer.label.circle	a vector of colors for outer circle of pfms

outer.label.circle.width	width for outer circle of pfms
draw.box	if TRUE draws a box around the current plot with the function box()
clockwise	a logical value indicating if slices are drawn clockwise or counter clockwise
init.angle	number specifying the starting angle (in degrees) for the slices. Defaults to 0 (i.e., '3 o'clock') unless clockwise is true where init.angle defaults to 90 (degrees), (i.e., '12 o'clock')
angle	number specifying the angle (in degrees) for phylogenetic tree. Defaults 360
pfmNameSpliter	spliter when name of pfms/pfms2 contain multiple node of labels.leaves
rccpostfix	the postfix for reverse complements
motifScale	the scale of logo size
ic.scale	logical. If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
plotIndex	logical. If TRUE, will plot index number in the motifLogo which can help user to describe the motifLogo
IndexCol	The color of the index number when plotIndex is TRUE.
IndexCex	The cex of the index number when plotIndex is TRUE.
groupDistance	show groupDistance on the draw
groupDistanceLineCol	groupDistance line color, default: red
plotAxis	logical. If TRUE, will plot distance axis.

**Value**

none

**Author(s)**

Jianhong Ou

            col.tree.bg=rep(color, each=5), col.leaves=rep(color, each=5),
            r.rings=c(0.02, 0.03, 0.04),
            col.rings=list(sample(colors(), 50),
                          sample(colors(), 50),
                          sample(colors(), 50)))
}

```

**motifCloud***plot a DNA sequence logo cloud***Description**

Plot a DNA sequence logo cloud

**Usage**

```

motifCloud(motifSig, rcpostfix="(RC)",
           layout=c("rectangles", "cloud", "tree"),
           scale=c(6, .5), rot.per=.1,
           draw.box=TRUE, draw.freq=TRUE,
           box.col="gray", freq.col="gray",
           group.col=NULL, groups=NULL, draw.legend=FALSE,
           font="Helvetica-Bold", ic.scale=TRUE, fontsize=12)

```

**Arguments**

<b>motifSig</b>	an object of class <a href="#">motifSig</a>
<b>rcpostfix</b>	postfix for reverse-complement motif names, default: (RC)
<b>layout</b>	layout of the logo cloud, rectangles, cloud or tree
<b>scale</b>	A vector of length 2 indicating the range of the size of the sequence logo.
<b>rot.per</b>	proportion sequence logo with 90 degree rotation. Only work for "cloud" layout
<b>draw.box</b>	draw box for each sequence logo or not
<b>draw.freq</b>	label frequency of each signature or not
<b>box.col</b>	color of box for each sequence logo
<b>freq.col</b>	color of frequency label
<b>group.col</b>	color setting for groups
<b>groups</b>	a named vectors of motif groups
<b>draw.legend</b>	draw group color legend or not
<b>font</b>	font of logo

<code>ic.scale</code>	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
<code>fontsize</code>	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

**Value**

`none`

**Examples**

```
if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")
  motifs <- as.list(matrix.fly)
  motifs <- motifs[grep("Dmelanogaster-FlyFactorSurvey-", names(motifs), fixed=TRUE)]
  names(motifs) <- gsub("Dmelanogaster_FlyFactorSurvey_", "", 
    gsub("_FBgn[0-9]+$", "", 
      gsub("[^a-zA-Z0-9]", "_",
        gsub("([0-9]+)$", "", names(motifs)))))
  motifs <- motifs[unique(names(motifs))]
  pfms <- sample(motifs, 50)
  jaspar.scores <- MotIV:::readDBScores(file.path(find.package("MotIV"),
    "extdata", "jaspar2010_PCC_SWU.scores"))
  d <- MotIV:::motifDistances(lapply(pfms, pfm2 pwm))
  hc <- MotIV:::motifHclust(d, method="average")
  phylog <- hclust2phylog(hc)
  leaves <- names(phylog$leaves)
  pfms <- pfms[leaves]
  pfms <- lapply(names(pfms), function(.ele, pfms){new("pfm", mat=pfms[[.ele]],
    name=.ele)}, pfms)
  motifSig <- motifSignature(pfms, phylog, groupDistance=0.1)
  motifCloud(motifSig)
}
```

**motifPiles**

*plot sequence logo stacks with a linear phylogenetic tree and multiple color sets*

**Description**

plot sequence logo stacks with a linear phylogenetic tree and multiple color sets.

**Usage**

```
motifPiles(phylog, pfms=NULL, pfms2=NULL,
  r.tree=.45, col.tree=NULL,
  cnodes=0, labels.nodes=names(phylog$nodes), clabel.nodes=0,
  cleaves=.2, labels.leaves=names(phylog$leaves), clabel.leaves=1,
  col.leaves=rep("black", length(labels.leaves)),
  col.leaves.bg=NULL, col.leaves.bg.alpha=1,
  r.pfms=NA, r.pfms2=NA, motifScale=c("logarithmic", "linear", "none"),
  col.pfms=NULL, col.pfms.width=0.02,
```

```

col.pfms2=NULL, col.pfms2.width=0.02,
r.anno=0, col.anno=list(),
pfmNameSpliter=";", rcprefix="(RC)", ic.scale=TRUE,
plotIndex=FALSE, IndexCol="black", IndexCex=.8,
groupDistance=NA, groupDistanceLineCol="red")

```

### Arguments

phylog	an object of class phylog
pfms	a list of objects of class pfm
pfms2	a list of objects of class pfm
r.tree	width of the tree
col.tree	a vector of colors for tree
cnodes	a character size for plotting the points that represent the nodes, used with par("cex")*cnodes. If zero, no points are drawn
labels.nodes	a vector of strings of characters for the nodes labels
clabel.nodes	a character size for the nodes labels, used with par("cex")*clabel.nodes. If zero, no nodes labels are drawn
cleaves	a character size for plotting the points that represent the leaves, used with par("cex")*cleaves. If zero, no points are drawn
labels.leaves	a vector of strings of characters for the leaves labels
clabel.leaves	a character size for the leaves labels, used with par("cex")*clabel.leaves
col.leaves	a vector of colors for leaves labels
col.leaves.bg	a vector of colors for background of leaves labels
col.leaves.bg.alpha	alpha value [0, 1] for the colors of backgroud of leaves labels
r.pfms	width of the pfms
r.pfms2	width of the pfms2
motifScale	the scale of logo size
col.pfms	a vector of colors for inner pile of pfms
col.pfms.width	width for inner pile of pfms
col.pfms2	a vector of colors for outer pile of pfms
col.pfms2.width	width for outer pile of pfms
r.anno	a vector of width of color sets
col.anno	a list of color sets
pfmNameSpliter	spliter when name of pfms/pfms2 contain multiple node of labels.leaves
rcprefix	the postfix for reverse complements
ic.scale	logical. If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
plotIndex	logical. If TRUE, will plot index number in the motifLogo which can help user to describe the motifLogo
IndexCol	The color of the index number when plotIndex is TRUE.
IndexCex	The cex of the index number when plotIndex is TRUE.
groupDistance	show groupDistance on the draw
groupDistanceLineCol	groupDistance line color, default: red

**Value**

none

}
```

**Description**

An object of class "**motifSig**" represents the output of function [motifSignature](#)

## Objects from the Class

Objects can be created by calls of the form `new("motifSig", signature, freq, nodelist, gpcol)`.

### Slots

```

signatures list object of class "pfm"
freq code"numeric" signature frequency
nodelist list object of class "ouNode"
gpcol code"character" signature group color sets

```

### Methods

```

signatures signature(object = "motifSig") return the signatures of motifSig
frequence signature(object = "motifSig") return the frequency of motifSig
nodelist signature(object = "motifSig") return the nodelist of motifSig
sigColor signature(object = "motifSig") return the group color sets of motifSig

```

motifSig-methods	<i>"motifSig" methods</i>
------------------	---------------------------

### Description

methods for motifSig objects.

### Usage

```

## S4 method for signature 'motifSig'
signatures(object)
## S4 method for signature 'motifSig'
frequence(object)
## S4 method for signature 'motifSig'
nodelist(object)
## S4 method for signature 'motifSig'
sigColor(object)

```

### Arguments

object	An object of class <code>motifSig</code> .
--------	--

### Methods

```

signatures signature(object = "motifSig") return the signatures of motifSig
frequence signature(object = "motifSig") return the frequency of motifSig
nodelist signature(object = "motifSig") return the nodelist of motifSig
sigColor signature(object = "motifSig") return the group color sets of motifSig
$, $<- Get or set the slot of motifSig

```

---

motifSignature	<i>get signatures from motifs</i>
----------------	-----------------------------------

---

## Description

extract signatures from multiple motifs by distance calculated from STAMP

## Usage

```
motifSignature(pfms, phylog, groupDistance, rcprefix="(RC)",  
min.freq=2, trim=0.2, families=list(), sort=TRUE)
```

## Arguments

pfms	a list of objects of class pfm
phylog	an object of class phylog
groupDistance	maximal distance of motifs in the same group
rcprefix	postfix for reverse-complement motif names, default: (RC)
min.freq	signatures with frequency below min.freq will not be plotted
trim	minimal information content for each position of signature
families	for each family, the motif number in one signature should only count as 1
sort	sort the signatures by frequency or not.

## Value

an Object of class [motifSig](#)

## Examples

```
if(interactive()){  
  library("MotifDb")  
  matrix.fly <- query(MotifDb, "Dmelanogaster")  
  motifs <- as.list(matrix.fly)  
  motifs <- motifs[grep("Dmelanogaster-FlyFactorSurvey-", names(motifs), fixed=TRUE)]  
  names(motifs) <- gsub("Dmelanogaster_FlyFactorSurvey_", "",  
    gsub("_FBgn[0-9]+$", "",  
      gsub("[^a-zA-Z0-9]", "_",  
        gsub("(_[0-9]+)$", "", names(motifs)))))  
  motifs <- motifs[unique(names(motifs))]  
  pfms <- sample(motifs, 50)  
  jaspar.scores <- MotIV::readDBScores(file.path(find.package("MotIV"),  
    "extdata", "jaspar2010_PCC_SWU.scores"))  
  d <- MotIV::motifDistances(lapply(pfms, pfm2pwm))  
  hc <- MotIV::motifHclust(d, method="average")  
  phylog <- hclust2phylog(hc)  
  leaves <- names(phylog$leaves)  
  pfms <- pfms[leaves]  
  pfms <- lapply(names(pfms), function(.ele, pfms){new("pfm", mat=pfms[[.ele]],  
    name=.ele)}, pfms)  
  motifSig <- motifSignature(pfms, phylog, groupDistance=0.1)  
}
```

---

<code>motifStack</code>	<i>plot a DNA sequence logo stack</i>
-------------------------	---------------------------------------

---

### Description

Plot a DNA sequence logo stack

### Usage

```
motifStack(pfms, layout=c("stack", "treeview", "phylog", "radialPhylog"), ...)
```

### Arguments

<code>pfms</code>	a list of objects of class <a href="#">pfm</a>
<code>layout</code>	layout of the logo stack, stack, treeview or radialPhylog
<code>...</code>	any parameters could to pass to <a href="#">plotMotifLogoStack</a> , <a href="#">plotMotifLogoStackWithTree</a> , <a href="#">plotMotifStackWithPhylog</a> or <a href="#">plotMotifStackWithRadialPhylog</a>

### Value

return a list contains pfms and phylog

### Examples

```
if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")
  motifs <- as.list(matrix.fly)
  motifs <- motifs[grep("Dmelanogaster-FlyFactorSurvey-", names(motifs), fixed=TRUE)]
  names(motifs) <- gsub("Dmelanogaster_FlyFactorSurvey_", "", 
    gsub("_FBgn[0-9]+$", "", 
      gsub("[^a-zA-Z0-9]", "_",
        gsub("_[0-9]+$", "", names(motifs)))))
  motifs <- motifs[unique(names(motifs))]
  pfms <- sample(motifs, 50)
  pfms <- lapply(names(pfms), function(.ele, pfms){new("pfm", mat=pfms[[.ele]], name=.ele)}, pfms)
  motifStack(pfms, "radialPhylog")
}
```

---

<code>ouNode-class</code>	<i>Class ouNode</i>
---------------------------	---------------------

---

### Description

An object of class "ouNode" represents a motif node in a cluster tree

### Objects from the Class

Objects can be created by calls of the form `new("ouNode", left, right, parent, distl, distr, sizel, sizer)`.

## Slots

**left:** character indicates the name of left leave  
**right:** character indicates the name of right leave  
**parent:** character indicates the name of parent node  
**distl:** numeric indicates the distance of left leave  
**distr:** numeric indicates the distance of right leave  
**sizel:** numeric indicates the size of left leave  
**sizer:** numeric indicates the size of right leave

## Methods

**\$, \$<-** Get or set the slot of **ouNode**

## Examples

```
new("ouNode", left="A", right="B", parent="Root", distl=1, distr=2, sizel=1, sizer=1)
```

pcm-class

*Class "pcm"*

## Description

An object of class "pcm" represents the position count matrix of a DNA/RNA/amino-acid sequence motif. The entry stores a matrix, which in row i, column j gives the counts of observing nucleotide/or amino acid i in position j of the motif.

## Objects from the Class

Objects can be created by calls of the form `new("pcm", mat, name, alphabet, color, background)`.

## Slots

**mat** Object of class "matrix" The position count matrix  
**name** code"character" The motif name  
**alphabet** "character" The sequence alphabet. "DNA", "RNA", "AA" or "others".  
**color** a "character" vector. The color setting for each symbol  
**background** a "numeric" vector. The background frequency.

## Methods

**addBlank** signature(x="pcm", n="numeric", b="logical") add space into the position count matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.  
**coerce** signature(from = "pcm", to = "matrix"): convert object pcm to matrix  
**getIC** signature(x = "pcm",) Calculate information content profile for position frequency matrix.  
**matrixReverseComplement** signature(x = "pcm") get the reverse complement of position frequency matrix.  
**trimMotif** signature(x = "pcm", t= "numeric") trim motif by information content.  
**plot** signature(x = "pcm") Plots the sequence logo of the position count matrix.

## Examples

```
pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A", "C", "G", "T")
motif <- new("pcm", mat=as.matrix(pcm), name="bin_SOLEXA")
plot(motif)
```

pcm-methods

*"pcm" methods*

## Description

methods for pcm objects.

## Usage

```
## S4 method for signature 'pcm,numeric,logical'
addBlank(x,n,b)
## S4 method for signature 'pcm,ANY'
getIC(x,p="missing")
## S4 method for signature 'pcm'
matrixReverseComplement(x)
## S4 method for signature 'pcm,ANY'
plot(x,y="missing",...)
## S4 method for signature 'pcm,ANY'
pcm2pfm(x,background="missing")
## S4 method for signature 'matrix,ANY'
pcm2pfm(x,background="missing")
## S4 method for signature 'matrix,numeric'
pcm2pfm(x,background)
## S4 method for signature 'data.frame,ANY'
pcm2pfm(x,background="missing")
## S4 method for signature 'data.frame,numeric'
pcm2pfm(x,background)
## S4 method for signature 'pcm,numeric'
trimMotif(x,t)
```

## Arguments

x	An object of class pcm. For getIC, if parameter p is followed, x should be an object of matrix. For pcm2pfm, x also could be an object of matrix.
y	Not use.
p	p is the background frequency.
n	how many spaces should be added.
b	logical value to indicate where the space should be added.
background	a "numeric" vector. The background frequency.
t	numeric value of information content threshold for trimming.
...	Further potential arguments passed to plotMotifLogo.

## Methods

**addBlank** signature(x="pcm", n="numeric", b="logical") add space into the position count matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.

**coerce** signature(from = "pcm", to = "matrix"): convert object pcm to matrix

**getIC** signature(x = "pcm",) Calculate information content profile for position frequency matrix.

**matrixReverseComplement** signature(x = "pcm") get the reverse complement of position frequency matrix.

**plot** signature(x = "pcm") Plots the sequence logo of the position count matrix.

**trimMotif** signature(x = "pcm", t= "numeric") trim motif by information content.

**\$, \$<-** Get or set the slot of [pcm-class](#)

## Examples

```
pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A", "C", "G", "T")
motif <- new("pcm", mat=as.matrix(pcm), name="bin_SOLEXA")
getIC(motif)
matrixReverseComplement(motif)
as(motif, "matrix")
pcm2pfm(motif)
```

*pfm-class*

*Class "pfm"*

## Description

An object of class "pfm" represents the position frequency matrix of a DNA/RNA/amino-acid sequence motif. The entry stores a matrix, which in row i, column j gives the frequency of observing nucleotide/or amino acid i in position j of the motif.

## Objects from the Class

Objects can be created by calls of the form `new("pfm", mat, name, alphabet, color, background)`.

## Slots

**mat** Object of class "matrix" The position frequency matrix

**name** code"character" The motif name

**alphabet** "character" The sequence alphabet. "DNA", "RNA", "AA" or "others".

**color** a "character" vector. The color setting for each symbol

**background** a "numeric" vector. The background frequency.

## Methods

**addBlank** signature(x="pfm", n="numeric", b="logical") add space into the position frequency matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.

**coerce** signature(from = "pfm", to = "matrix"): convert object pfm to matrix

**getIC** signature(x = "pfm",) Calculate information content profile for position frequency matrix.

**getIC** signature(x = "matrix", p = "numeric") Calculate information content profile for matrix. p is the background frequency

**matrixReverseComplement** signature(x = "pfm") get the reverse complement of position frequency matrix.

**trimMotif** signature(x = "pfm", t= "numeric") trim motif by information content.

**plot** signature(x = "pfm") Plots the sequence logo of the position frequency matrix.

## Examples

```
pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A","C","G","T")
motif <- pcm2pfm(pcm)
motif <- new("pfm", mat=motif, name="bin_SOLEXA")
plot(motif)
```

## Description

methods for pfm objects.

## Usage

```
## S4 method for signature 'pfm,numeric,logical'
addBlank(x,n,b)
## S4 method for signature 'pfm,ANY'
getIC(x,p="missing")
## S4 method for signature 'matrix,numeric'
getIC(x,p)
## S4 method for signature 'pfm'
matrixReverseComplement(x)
## S4 method for signature 'pfm,ANY'
plot(x,y="missing",...)
## S4 method for signature 'pfm,numeric'
trimMotif(x,t)
```

### Arguments

x	An object of class <code>pfm</code> . For <code>getIC</code> , if parameter <code>p</code> is followed, <code>x</code> should be an object of matrix.
y	Not use.
p	<code>p</code> is the background frequency.
n	how many spaces should be added.
b	logical value to indicate where the space should be added.
t	numeric value of information content threshold for trimming.
...	Further potential arguments passed to <code>plotMotifLogo</code> .

### Methods

**addBlank** signature(`x="pfm"`, `n="numeric"`, `b="logical"`) add space into the position frequency matrix for alignment. `b` is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. `n` indicates how many spaces should be added.

**getIC** signature(`x = "pfm"`,) Calculate information content profile for position frequency matrix.

**getIC** signature(`x = "matrix"`, `p = "numeric"`) Calculate information content profile for matrix. `p` is the background frequency

**matrixReverseComplement** signature(`x = "pfm"`) get the reverse complement of position frequency matrix.

**plot** signature(`x = "pfm"`) Plots the sequence logo of the position frequency matrix.

**trimMotif** signature(`x = "pfm"`, `t= "numeric"`) trim motif by information content.

**\$, \$<-** Get or set the slot of [pfm-class](#)

### Examples

```
pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A", "C", "G", "T")
motif <- pcm2pfm(pcm)
motif <- new("pfm", mat=motif, name="bin_SOLEXA")
getIC(motif)
matrixReverseComplement(motif)
addBlank(motif, 1, FALSE)
addBlank(motif, 3, TRUE)
as(motif,"matrix")
```

**pfm2 pwm**

*convert pfm object to PWM*

### Description

convert pfm object to PWM

### Usage

`pfm2 pwm(x)`

**Arguments**

- x an object of [pfm](#) or [pcm](#) or matrix

**Value**

A numeric matrix representing the Position Weight Matrix for PWM.

**Author(s)**

Jianhong Ou

**See Also**

[PWM](#)

**Examples**

```
library("MotifDb")
matrix.fly <- query(MotifDb, "Dmelanogaster")
pfm2 pwm(matrix.fly[[1]])
```

**plotAffinityLogo**      *plot affinity logo*

**Description**

plot affinity logo

**Usage**

```
plotAffinityLogo(psam, motifName, font="Helvetica-Bold",
                  colset=c("#00811B", "#2000C7", "#FFB32C", "#D00001"),
                  alpha=0.5, newpage=TRUE, fontsize=12)
```

**Arguments**

- |           |   |
|-----------|---|
| psam      | a position-specific affinity matrix   |
| motifName | motif name  |
| font      | font of logo  |
| colset    | color setting for each logo letter  |
| alpha     | Alpha channel for transparency of low affinity letters.   |
| newpage   | plot in a new canvas or not.  |
| fontsize  | font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size. |

**Value**

none

## Examples

```
psam <- importMatrix(file.path(find.package("motifStack"), "extdata", "PSAM.mxr"),
                      format="psam")[[1]]
plotAffinityLogo(psam)
```

**plotMotifLogo**

*plot sequence logo*

## Description

plot amino acid or DNA sequence logo

## Usage

```
plotMotifLogo(pfm, motifName, p=rep(0.25, 4), font="Helvetica-Bold",
               colset=c("#00811B", "#2000C7", "#FFB32C", "#D00001"),
               xaxis=TRUE, yaxis=TRUE, xlab="position", ylab="bits",
               xlcex=1.2, ylcex=1.2, ncex=1.2, ic.scale=TRUE, fontsize=12)
```

## Arguments

pfm	a position frequency matrices
motifName	motif name
p	background possibility
font	font of logo
colset	color setting for each logo letter
xaxis	draw x-axis or not
yaxis	draw y-axis or not
xlab	x-label, do nothing if set xlab as NA
ylab	y-label, do nothing if set ylab as NA
xlcex	cex value for x-label
ylcex	cex value for y-label
ncex	cex value for motif name
ic.scale	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

## Value

none

**Examples**

```
pcm<-matrix(runif(40,0,100),nrow=4,ncol=10)
pfm<-pcm2pfm(pcm)
rownames(pfm)<-c("A","C","G","T")
plotMotifLogo(pfm)
```

plotMotifLogoA

*plot sequence logo without plot.new***Description**

plot amino acid or DNA sequence logo in a given canvas

**Usage**

```
plotMotifLogoA(pfm, font="Helvetica-Bold", ic.scale=TRUE, fontsize=12)
```

**Arguments**

pfm	an object of pfm
font	font of logo
ic.scale	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

**Value**

none

**Examples**

```
pcm<-matrix(runif(40,0,100),nrow=4,ncol=10)
pfm<-pcm2pfm(pcm)
rownames(pfm)<-c("A","C","G","T")
motif <- new("pfm", mat=pfm, name="bin_SOLEXA")
plotMotifLogoA(motif)
```

plotMotifLogoStack

*plot sequence logos stack***Description**

plot sequence logos stack

**Usage**

```
plotMotifLogoStack(pfms, ...)
```

**Arguments**

- `pfms` a list of position frequency matrices, pfms must be a list of class pfm  
`...` other parameters can be passed to plotMotifLogo function

**Value**

`none`

**Examples**

```
pcm1<-matrix(c(0,50,0,50,
               100,0,0,0,
               0,100,0,0,
               0,0,100,0,
               0,0,0,100,
               50,50,0,0,
               0,0,50,50), nrow=4)
pcm2<-matrix(c(50,50,0,0,
               0,100,0,0,
               0,50,50,0,
               0,0,0,100,
               50,50,0,0,
               0,0,50,50), nrow=4)
rownames(pcm1)<-c("A", "C", "G", "T")
rownames(pcm2)<-c("A", "C", "G", "T")
pfms<-list(p1=new("pfm", mat=pcm2pfm(pcm1), name="m1"),
            p2=new("pfm", mat=pcm2pfm(pcm2), name="m2"))
pfms<-DNAmotifAlignment(pfms)
plotMotifLogoStack(pfms)
```

**plotMotifLogoStackWithTree**

*plot sequence logos stack with hierarchical cluster tree*

**Description**

plot sequence logos stack with hierarchical cluster tree

**Usage**

```
plotMotifLogoStackWithTree(pfms, hc, treewidth=1/8, trueDist=FALSE, ...)
```

**Arguments**

- `pfms` a list of position frequency matrices, pfms must be a list of class pfm  
`hc` an object of the type produced by stats::hclust  
`treewidth` the width to show tree  
`trueDist` logical flags to use hclust height or not.  
`...` other parameters can be passed to plotMotifLogo function

**Value**

none

**Examples**

```
#####Input#####
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"), "pcm$")
motifs<-lapply(pcms, pcm2pfm)

#####Clustering#####
jaspar.scores <- MotIV::readDBScores(file.path(find.package("MotIV"),
                                              "extdata", "jaspar2010_PCC_SWU.scores"))
d <- MotIV::motifDistances(lapply(motifs, pfm2pwm))
hc <- MotIV::motifHclust(d, method="average")

##reorder the motifs for plotMotifLogoStack
motifs<-motifs[hc$order]
##do alignment
motifs<-DNAMotifAlignment(motifs)
##plot stacks
plotMotifLogoStack(motifs, ncol=1.0)
plotMotifLogoStackWithTree(motifs, hc=hc)
```

**plotMotifOverMotif**      *plot motif over another motif*

**Description**

plot motif over another motif to emphasize the difference.

**Usage**

```
plotMotifOverMotif(motif, backgroundMotif, bgNoise=NA,
                   font="Helvetica-Bold", textgp=gpar())
```

**Arguments**

<b>motif</b>	an object of <a href="#">pcm</a> or <a href="#">pfm</a>
<b>backgroundMotif</b>	an object of <a href="#">pcm</a> or <a href="#">pfm</a>
<b>bgNoise</b>	if it is not NA, test will use a background by Dirichlet(1)-distributed random frequencies with weight bg.noise. The value of bgNoise should be a number in the range of 0 to 1, eg. 0.05
<b>font</b>	font for logo symbol
<b>textgp</b>	text parameter

**Value**

none

## Examples

```
pcms <- readPCM(file.path(find.package("motifStack"), "extdata"), "pcm$")
len <- sapply(pcms, function(.ele) ncol(.ele$mat))
pcms <- pcms[len==7]
plotMotifOverMotif(pcms[[1]], pcms[[2]], bgNoise=0.05)
```

**plotMotifStackWithPhylog**

*plot sequence logo stacks with a ape4-style phylogenetic tree*

## Description

plot sequence logo stacks with a ape4-style phylogenetic tree

## Usage

```
plotMotifStackWithPhylog(phylog, pfms=NULL,
                         f.phylog = 0.3, f.logo = NULL, cleaves =1, cnodes =0,
                         labels.leaves = names(phylog$leaves), clabel.leaves=1,
                         labels.nodes = names(phylog$nodes), clabel.nodes = 0,
                         font="Helvetica-Bold", ic.scale=TRUE, fontsize=12)
```

## Arguments

phylog	an object of class phylog
pfms	a list of objects of class pfm
f.phylog	a size coefficient for tree size (a parameter to draw the tree in proportion to leaves label)
f.logo	a size coefficient for the motif
cleaves	a character size for plotting the points that represent the leaves, used with par("cex")*cleaves. If zero, no points are drawn
cnodes	a character size for plotting the points that represent the nodes, used with par("cex")*cnodes. If zero, no points are drawn
labels.leaves	a vector of strings of characters for the leaves labels
clabel.leaves	a character size for the leaves labels, used with par("cex")*clavel.leaves
labels.nodes	a vector of strings of characters for the nodes labels
clabel.nodes	a character size for the nodes labels, used with par("cex")*clabel.nodes. If zero, no nodes labels are drawn
font	font of logo
ic.scale	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

## Value

none

### Arguments

<code>phylog</code>	an object of class phylog
<code>pfms</code>	a list of objects of class pfm
<code>circle</code>	a size coefficient for the outer circle of the labels. Please note this is the position of <code>inner.label.circle</code> .
<code>circle.motif</code>	a size coefficient for the motif circle
<code>cleaves</code>	a character size for plotting the points that represent the leaves, used with <code>par("cex")*cleaves</code> . If zero, no points are drawn
<code>cnodes</code>	a character size for plotting the points that represent the nodes, used with <code>par("cex")*cnodes</code> . If zero, no points are drawn
<code>labels.leaves</code>	a vector of strings of characters for the leaves labels
<code>clabel.leaves</code>	a character size for the leaves labels, used with <code>par("cex")*clabel.leaves</code>
<code>labels.nodes</code>	a vector of strings of characters for the nodes labels
<code>clabel.nodes</code>	a character size for the nodes labels, used with <code>par("cex")*clabel.nodes</code> . If zero, no nodes labels are drawn
<code>draw.box</code>	if TRUE draws a box around the current plot with the function <code>box()</code>
<code>col.leaves</code>	a vector of colors for leaves labels
<code>col.leaves.bg</code>	a vector of colors for background of leaves labels
<code>col.leaves.bg.alpha</code>	alpha value [0, 1] for the colors of background of leaves labels
<code>col.bg</code>	a vector of colors for tree background
<code>col.bg.alpha</code>	a alpha value [0, 1] of colors for tree background
<code>col.inner.label.circle</code>	a vector of colors for inner circle of pfms
<code>inner.label.circle.width</code>	width for inner circle of pfms
<code>col.outer.label.circle</code>	a vector of colors for outer circle of pfms
<code>outer.label.circle.width</code>	width for outer circle of pfms
<code>clockwise</code>	a logical value indicating if slices are drawn clockwise or counter clockwise
<code>init.angle</code>	number specifying the starting angle (in degrees) for the slices. Defaults to 0 (i.e., '3 o'clock') unless <code>clockwise</code> is true where <code>init.angle</code> defaults to 90 (degrees), (i.e., '12 o'clock')
<code>angle</code>	number specifying the angle (in degrees) for phylogenetic tree. Defaults 360
<code>pfmNameSplitter</code>	splitter when name of pfms contain multiple node of <code>labels.leaves</code>
<code>rcpostfix</code>	the postfix for reverse complements
<code>motifScale</code>	the scale of logo size
<code>ic.scale</code>	logical. If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.

plotIndex	logical. If TRUE, will plot index number in the motifLogo which can help user to describe the motifLogo
IndexCol	The color of the index number when plotIndex is TRUE.
IndexCex	The cex of the index number when plotIndex is TRUE.
groupDistance	show groupDistance on the draw
groupDistanceLineCol	groupDistance line color, default: red
plotAxis	logical. If TRUE, will plot distance axis.
font	font of logo
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

**Value**

none

**See Also**[plot.phylog](#)**Examples**

```

if(interactive()){

}

```

---

**plotXaxis***plot x-axis*

---

**Description**

plot x-axis for the sequence logo

**Usage**

```
plotXaxis(pfM, p=rep(0.25, 4))
```

**Arguments**

pfM	position frequency matrices
p	background possibility

**Value**

none

---

**plotYaxis***plot y-axis*

---

**Description**

plot y-axis for the sequence logo

**Usage**

```
plotYaxis(ymax)
```

**Arguments**

ymax	max value of y axis
------	---------------------

**Value**

none

---

psam-class	<i>Class "psam"</i>
------------	---------------------

---

### Description

An object of class "psam" represents the position specific affinity matrix (PSAM) of a DNA/RNA/amino-acid sequence motif. The entry stores a matrix, which in row i, column j gives the affinity of observing nucleotide/or amino acid i in position j of the motif.

### Objects from the Class

Objects can be created by calls of the form new("psam", mat, name, alphabet, color).

### Slots

mat Object of class "matrix" The position specific affinity matrix  
 name code"character" The motif name  
 alphabet "character" The sequence alphabet. "DNA", "RNA", "AA" or "others".  
 color a "character" vector. The color setting for each symbol

### Methods

**addBlank** signature(x="psam", n="numeric", b="logical") add space into the position specific affinity matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.  
**coerce** signature(from = "psam", to = "matrix"): convert object psam to matrix  
**matrixReverseComplement** signature(x = "psam") get the reverse complement of position specific affinity matrix.  
**plot** signature(x = "psam") Plots the affinity logo of the position specific affinity matrix.

### Examples

```
motif <- importMatrix(file.path(find.package("motifStack"), "extdata", "PSAM.mxr"),
                      format="psam")[[1]]
plot(motif)
```

---

psam-methods	<i>"psam" methods</i>
--------------	-----------------------

---

### Description

methods for psam objects.

### Usage

```
## S4 method for signature 'psam,numeric,logical'
addBlank(x,n,b)
## S4 method for signature 'psam'
matrixReverseComplement(x)
## S4 method for signature 'psam,ANY'
plot(x,y="missing",...)
```

**Arguments**

- x An object of class psam.
- y Not use.
- n how many spaces should be added.
- b logical value to indicate where the space should be added.
- ... Further potential arguments passed to plotAffinityLogo.

**Methods**

- addBlank** signature(x="psam", n="numeric", b="logical") add space into the position specific affinity matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.
- matrixReverseComplement** signature(x = "psam") get the reverse complement of position specific affinity matrix.
- plot** signature(x = "psam") Plots the affinity logo of the position specific affinity matrix.
- \$, \$<-** Get or set the slot of [psam-class](#)

**Examples**

```
motif <- importMatrix(file.path(find.package("motifStack"), "extdata", "PSAM.mxr"),
                      format="psam")[[1]]
matrixReverseComplement(motif)
addBlank(motif, 1, FALSE)
addBlank(motif, 3, TRUE)
as(motif,"matrix")
```

**readPCM***read pcm from a path***Description**

read position count matrix from a path

**Usage**

```
readPCM(path=". ", pattern=NULL)
```

**Arguments**

- path a character vector of full path names
- pattern an optional regular expression

**Value**

A list of [pcm](#) objects

**Examples**

```
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"),"pcm$")
```

---

reorderUPGMAtree	<i>re-order UPGMA tree</i>
------------------	----------------------------

---

## Description

re-order the UPGMA tree by adjacent motif distance

## Usage

```
reorderUPGMAtree(phylog, motifs, rcpostfix = "(RC)")
```

## Arguments

phylog	an object of phylog
motifs	a list of objects of pfm
rcpostfix	the postfix for reverse complements

## Value

an object of phylog

## Author(s)

Jianhong Ou

## Examples

```
if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")
  motifs <- as.list(matrix.fly)
