

# Rle Tips and Tricks

Patrick Aboyoun

March 20, 2010

```
> rollmeanRle <- function(x, k) {  
+   n <- length(x)  
+   cumsum(c(Rle(sum(window(x, 1, k))), window(x,  
+     k + 1, n) - window(x, 1, n - k)))/k  
+ }  
  
> rollvarRle <- function(x, k) {  
+   n <- length(x)  
+   means <- rollmeanRle(x, k)  
+   nextMean <- window(means, 2, n - k + 1)  
+   cumsum(c(Rle(sum((window(x, 1, k) - means[1])^2)),  
+     k * diff(means)^2 - (window(x, 1, n -  
+       k) - nextMean)^2 + (window(x, k +  
+         1, n) - nextMean)^2))/(k - 1)  
+ }  
  
> rollcovRle <- function(x, y, k) {  
+   n <- length(x)  
+   meanX <- rollmeanRle(x, k)  
+   meanY <- rollmeanRle(y, k)  
+   nextMeanX <- window(meanX, 2, n - k + 1)  
+   nextMeanY <- window(meanY, 2, n - k + 1)  
+   cumsum(c(Rle(sum((window(x, 1, k) - meanX[1]) *  
+     (window(y, 1, k) - meanY[1])), k * diff(meanX) *  
+     diff(meanY) - (window(x, 1, n - k) - nextMeanX) *  
+     (window(y, 1, n - k) - nextMeanY) + (window(x,  
+       k + 1, n) - nextMeanX) * (window(y, k +  
+         1, n) - nextMeanY)))/(k - 1)  
+ }  
  
> rollsdrle <- function(x, k) {  
+   sqrt(rollvarRle(x, k))  
+ }  
  
> rollcorRle <- function(x, y, k) {  
+   rollcovRle(x, y, k)/(rollsdrle(x, k) * rollsdrle(y,  
+     k))  
+ }
```
