

The DMRcatedata package user's guide

Peters TJ, Buckley MJ, Pidsley R, Clark SJ, Molloy PL

April 18, 2015

Package Contents

DMRcatedata accompanies the DMRcate package, providing data for examples and probe filtering.

```
library(DMRcatedata)
data(dmrcatedata)
```

Three objects are contained in DMRcatedata. `crosshyb` is a factor listing probe IDs potentially confounded by cross-hybridisation to other parts of the genome[1]. It is used internally by `rmSNPandCH()`.

```
str(crosshyb)
##  Factor w/ 30969 levels "cg00001510","cg00003969",...: 1 2 3 4 5 6 7 8 9 10 ...
```

`illuminaSNPs` is a data.frame containing probes that are potentially confounded by a SNP. It lists the SNPID, distance (in nucleotides) to the CpG in question, and minor allele frequency for each associated SNP

```
class(illuminaSNPs)
## [1] "data.frame"
dim(illuminaSNPs)
## [1] 153113      3
head(illuminaSNPs)

##                                     SNP Distance MinorAlleleFrequency
## cg00000108          rs9857774     16        0.056801
## cg00000109          rs9864492     17        0.010135
## cg00000165          rs76771611    25        0.027778
## cg00000292          rs62037371    31        0.333333
## cg00000769          rs74996347    51        0.5
## cg00000807 rs113612339;rs114523815 1, 38  0.500000, 0.025424
```

`myBetas` is a matrix of 450K probe beta values, matching to Homo Sapiens chromosome 20, sourced from the colon and rectal adenocarcinoma section of The Cancer Genome Atlas (TCGA) Repository. It contains 38 matched tumour/normal pairs.

```
class(myBetas)
## [1] "matrix"
dim(myBetas)
## [1] 10042    76
```
