

Package ‘interacCircos’

March 31, 2025

Type Package

Title The Generation of Interactive Circos Plot

Description Implement in an efficient approach to display the genomic data, relationship, information in an interactive circular genome(Circos) plot. 'interacCircos' are inspired by 'circosJS', 'BioCircos.js' and 'NG-Circos' and we integrate the modules of 'circosJS', 'BioCircos.js' and 'NG-Circos' into this R package, based on 'htmlwidgets' framework.

Version 1.16.0

License GPL-3

Encoding UTF-8

LazyData true

Depends R (>= 4.1)

Imports RColorBrewer, htmlwidgets, plyr, methods

RoxygenNote 7.1.1

Suggests knitr, rmarkdown

VignetteBuilder knitr

Index**84**

arcExample	<i>Arc plot example data</i>
-------------------	------------------------------

Description

The data is in matrix with column names

Usage

```
arcExample
```

Format

A data frame with 7 columns:

- chr** chromosome
- start** start position
- end** end position
- color** color

des description
link hyperlink
html The external html language

bubbleExample *Bubble plot example data*

Description

The data is in matrix with column names

Usage

bubbleExample

Format

A data frame with 8 columns:

chr chromosome
start start position
end end position
name name for description
value value
color specified color for bubble
layer layer number
html The external html language

chord.pExample *Example data of chord plot of circosJS*

Description

The data is in matrix with column names

Usage

chord.pExample

Format

A data frame in which each row represents the relationship from one genome position(source) to another one(target):

source_chr chromosome name of source
source_start start position of source
source_end end position of source
target_chr chromosome name of target
target_start start position of target
target_end end position of target

chordExample	<i>Example data of chord plot of NG-Circos</i>
--------------	--

Description

The data is in matrix with column names. The order and number is same as column, representing the same items

Usage

```
chordExample
```

Format

A data frame in which each value represents the relationship from a column to a row:

C.CK Genome 1, the name for each arc
C.NPK Genome 2, the name for each arc
GC.CK Genome 2, the name for each arc
GC.NPK Genome 2, the name for each arc
Alphaproteobacteria Genome 2, the name for each arc
Betaproteobacteria Genome 2, the name for each arc
Gammaproteobacteria Genome 2, the name for each arc
Delta proteobacteria Genome 8, the name for each arc
Acidobacteria Genome 9, the name for each arc
Actinobacteria Genome 10, the name for each arc
Bacteroidetes Genome 11, the name for each arc
Chloroflexi Genome 12, the name for each arc
Firmicutes Genome 13, the name for each arc
Gemmatimonadetes Genome 14, the name for each arc
Planctomycetes Genome 15, the name for each arc
Thaumarchaeota Genome 16, the name for each arc
Verrucomicrobia Genome 17, the name for each arc
Ascomycota Genome 18, the name for each arc
Basidiomycota Genome 19, the name for each arc
Zygomycota Genome 20, the name for each arc

Circos *interacCircos*

Arguments

moduleList	Module list displayed in plot
genome	Could be either 'hg19', which is defaultly set to use chromosomes of hg19, or a list of chromosomes with length, for example, list("chr1"=100,"chr2"=200)
genome2	Second genome when compare module is applied, format is same as genome
genomeFillColor	Could be either a color palette from RColorBrewer, or a list of color name, for example, list("yellow","rgb(1,255,255)")
chrPad	Distance between each chromosome, default is 0.04
width, height	The width and height for svg element, could be px or percent or auto
innerRadius	Default 216, Inner radius of chromosome
outerRadius	Default 240, Outer radius of chromosome
svgClassName	The svg class name
displayGenomeBorder	Whether display a border for genome track or not
genomeBorderColor, genomeBorderSize	The color and size for border of genome
genomeTicksDisplay	Whether display the ticks for genome track
genomeTicksLen, genomeTicksColor, genomeTicksFontSize, genomeTicksTextColor, genomeTicksScale, genomeTicksRealLength, genomeTicksOffset	arameters only works when genomeTicksDisplay is TRUE and their details are available on document
genomeLabelDisplay, genomeLabelTextSize, genomeLabelTextColor, genomeLabelDx, genomeLabelDy	Whether display the label for chromosome panel. Other parameters only works when genomeTicksDisplay is TRUE and their details are available on document

compareEvent Default False, open/not COMPARE module
compareEventGroupGapRate Default 0.1, control the two-side gap rate on each group of genome
compareEventGroupDistance Default 0, distance between two groups of genome
zoom Whether or not the plot is zoomable?
TEXTModuleDragEvent Are text annotations draggable?
CNVxlink Default False, add/not xlink for CNV module
CNVMouseEvent Default True, open/not open mouse event of CNV module
CNVMouseClickDisplay Default False, show/not the tooltip when mouse click on a CNV point
CNVMouseClickColor Color when mouse clicking
CNVMouseClickArcOpacity Arc opacity when mouse clicking the element
CNVMouseClickArcStrokeColor Arc stroke color when mouse clicking the element
CNVMouseClickArcStrokeWidth Arc stroke width when mouse clicking the element
CNVMouseClickTextFromData Text column when mouse clicking the element
CNVMouseClickTextOpacity Text opacity when mouse clicking the element
CNVMouseClickTextColor Text color when mouse clicking the element
CNVMouseClickTextSize Text size when mouse clicking the element
CNVMouseClickTextPostionX, CNVMouseClickTextPostionY Text coordinates when mouse clicking the element
CNVMouseClickTextDrag Whether text is draggable when mouse clicking the element
CNVMouseDownDisplay Default False, show/not the tooltip when mouse click down a CNV point
CNVMouseDownColor Color when mouse moving down the element
CNVMouseDownArcOpacity Arc opacity when mouse moving down the element
CNVMouseDownArcStrokeColor Arc stroke color when mouse moving down the element
CNVMouseDownArcStrokeWidth Arc stroke width when mouse moving down the element
CNVMouseEnterDisplay Default False, show/not the tooltip when mouse mover over a CNV point
CNVMouseEnterColor Color when mouse entering the element
CNVMouseEnterArcOpacity Arc opacity when mouse entering the element

CNVMouseEnterArcStrokeColor
 Arc stroke color when mouse entering the element
CNVMouseEnterArcStrokeWidth
 Arc stroke width when mouse entering the element
CNVMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a CNV point
CNVMouseLeaveColor
 Color when mouse leaving the element
CNVMouseLeaveArcOpacity
 Arc opacity when mouse leaving the element
CNVMouseLeaveArcStrokeColor
 Arc stroke color when mouse leaving the element
CNVMouseLeaveArcStrokeWidth
 Arc stroke width when mouse leaving the element
CNVMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a CNV point
CNVMouseMoveColor
 Color when mouse moving in the element
CNVMouseMoveArcOpacity
 Arc opacity when mouse moving in the element
CNVMouseMoveArcStrokeColor
 Arc stroke color when mouse moving in the element
CNVMouseMoveArcStrokeWidth
 Arc stroke width when mouse moving in the element
CNVMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a CNV point anymore
CNVMouseOutAnimationTime
 Animation time when mouse moving out the element
CNVMouseOutColor
 Color when mouse moving out the element
CNVMouseOutArcOpacity
 Arc opacity when mouse moving out the element
CNVMouseOutArcStrokeColor
 Arc stroke color when mouse moving out the element
CNVMouseOutArcStrokeWidth
 Arc stroke width when mouse moving out the element
CNVMouseUpDisplay
 Default False, show/not the tooltip when mouse click up a CNV point
CNVMouseUpColor
 Color when mouse moving up the element
CNVMouseUpArcOpacity
 Arc opacity when mouse clicking the element
CNVMouseUpArcStrokeColor
 Arc stroke color when mouse clicking the element
CNVMouseUpArcStrokeWidth
 Arc stroke width when mouse clicking the element
CNVMouseOverDisplay
 Default False, show/not the tooltip when mouse hover on a CNV point

```

CNVMouseOverColor
    Color when mouse moving over the element
CNVMouseOverArcOpacity
    Arc opacity when mouse moving over the element
CNVMouseOverArcStrokeColor
    Arc stroke color when mouse moving over the element
CNVMouseOverArcStrokeWidth
    Arc stroke width when mouse moving over the element
CNVMouseOverTooltipsSetting
    Default "style1"
CNVMouseOverTooltipsHtml
    Default ""
CNVMouseOverTooltipsPosition
    Default "absolute"
CNVMouseOverTooltipsBackgroundColor
    Default "white"
CNVMouseOverTooltipsBorderStyle
    Default "solid"
CNVMouseOverTooltipsBorderWidth
    Default 0
CNVMouseOverTooltipsPadding
    Default "3px"
CNVMouseOverTooltipsBorderRadius
    Default "3px"
CNVMouseOverTooltipsOpacity
    Default 0.8
HEATMAPMouseEvent
    Default True, open/not open mouse event of HEATMAP module
HEATMAPMouseClickDisplay
    Default False, show/not the tooltip when mouse click on a HEATMAP point
HEATMAPMouseClickColor
    Color when mouse clicking
HEATMAPMouseClickOpacity
    Opacity when mouse clicking
HEATMAPMouseClickStrokeColor
    Stroke color when mouse clicking
HEATMAPMouseClickStrokeWidth
    Stroke width when mouse clicking
HEATMAPMouseDownDisplay
    Default False, show/not the tooltip when mouse click down a HEATMAP point
HEATMAPMouseDownColor
    Color when mouse moving down the element
HEATMAPMouseDownOpacity
    Opacity when mouse moving down the element
HEATMAPMouseDownStrokeColor
    Stroke color when mouse moving down the element
HEATMAPMouseDownStrokeWidth
    Stroke width when mouse moving down the element

```

HEATMAPMouseEnterDisplay
 Default False, show/not the tooltip when mouse mover over a HEATMAP point

HEATMAPMouseEnterColor
 Color when mouse entering the element

HEATMAPMouseEnterOpacity
 Opacity when mouse entering the element

HEATMAPMouseEnterStrokeColor
 Stroke color when mouse entering the element

HEATMAPMouseEnterStrokeWidth
 Stroke width when mouse entering the element

HEATMAPMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a HEATMAP point

HEATMAPMouseLeaveColor
 Color when mouse leaving the element

HEATMAPMouseLeaveOpacity
 Opacity when mouse leaving the element

HEATMAPMouseLeaveStrokeColor
 Stroke color when mouse leaving the element

HEATMAPMouseLeaveStrokeWidth
 Stroke width when mouse leaving the element

HEATMAPMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a HEATMAP point

HEATMAPMouseMoveColor
 Color when mouse moving in the element

HEATMAPMouseMoveOpacity
 Opacity when mouse moving in the element

HEATMAPMouseMoveStrokeColor
 Stroke color when mouse moving in the element

HEATMAPMouseMoveStrokeWidth
 Stroke width when mouse moving in the element

HEATMAPMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a HEATMAP point anymore

HEATMAPMouseOutAnimationTime
 Animation time when mouse moving out the element

HEATMAPMouseOutColor
 Color when mouse moving out the element

HEATMAPMouseOutOpacity
 Opacity when mouse moving out the element

HEATMAPMouseOutStrokeColor
 Stroke color when mouse moving out the element

HEATMAPMouseOutStrokeWidth
 Stroke width when mouse moving out the element

HEATMAPMouseUpDisplay
 Default False, show/not the tooltip when mouse click up a HEATMAP point

HEATMAPMouseUpColor
 Color when mouse moving up the element

```

HEATMAPMouseUpOpacity
    Opacity when mouse moving up the element
HEATMAPMouseUpStrokeColor
    Stroke color when mouse moving up the element
HEATMAPMouseUpStrokeWidth
    Stroke width when mouse moving up the element
HEATMAPMouseOverDisplay
    Default False, show/not the tooltip when mouse hover on a HEATMAP point
HEATMAPMouseOverColor
    Color when mouse moving over the element
HEATMAPMouseOverOpacity
    Opacity when mouse moving over the element
HEATMAPMouseOverStrokeColor
    Stroke color when mouse moving over the element
HEATMAPMouseOverStrokeWidth
    Stroke width when mouse moving over the element
HEATMAPMouseOverToolipsSetting
    Default "style1"
HEATMAPMouseOverToolipsHtml
    Default ""
HEATMAPMouseOverToolipsPosition
    Default "absolute"
HEATMAPMouseOverToolipsBackgroundColor
    Default "white"
HEATMAPMouseOverToolipsBorderStyle
    Default "solid"
HEATMAPMouseOverToolipsBorderWidth
    Default 0
HEATMAPMouseOverToolipsPadding
    Default "3px"
HEATMAPMouseOverToolipsBorderRadius
    Default "3px"
HEATMAPMouseOverToolipsOpacity
    Default 0.8
BUBBLExlink      Default False, add/not xlink for BUBBLE module
BUBBLEMouseEvent
    Default True, open/not open mouse event of BUBBLE module
BUBBLEMouseClickDisplay
    Default False, show/not the tooltip when mouse click on a BUBBLE point
BUBBLEMouseClickColor
    Color when mouse clicking
BUBBLEMouseClickOpacity
    Opacity when mouse clicking
BUBBLEMouseClickStrokeColor
    Stroke color when mouse clicking
BUBBLEMouseClickStrokeWidth
    Stroke width when mouse clicking
BUBBLEMouseDownDisplay
    Default False, show/not the tooltip when mouse click down a BUBBLE point

```

BUBBLEMouseDownColor
 Color when mouse moving down the element

BUBBLEMouseDownOpacity
 Opacity when mouse moving down the element

BUBBLEMouseDownStrokeColor
 Stroke color when mouse moving down the element

BUBBLEMouseDownStrokeWidth
 Stroke width when mouse moving down the element

BUBBLEMouseEnterDisplay
 Default False, show/not the tooltip when mouse mover over a BUBBLE point

BUBBLEMouseEnterColor
 Color when mouse entering the element

BUBBLEMouseEnterOpacity
 Opacity when mouse entering the element

BUBBLEMouseEnterStrokeColor
 Stroke color when mouse entering the element

BUBBLEMouseEnterStrokeWidth
 Stroke width when mouse entering the element

BUBBLEMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a BUBBLE point

BUBBLEMouseLeaveColor
 Color when mouse leaving the element

BUBBLEMouseLeaveOpacity
 Opacity when mouse leaving the element

BUBBLEMouseLeaveStrokeColor
 Stroke color when mouse leaving the element

BUBBLEMouseLeaveStrokeWidth
 Stroke width when mouse leaving the element

BUBBLEMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a BUBBLE point

BUBBLEMouseMoveColor
 Color when mouse moving in the element

BUBBLEMouseMoveOpacity
 Opacity when mouse moving in the element

BUBBLEMouseMoveStrokeColor
 Stroke color when mouse moving in the element

BUBBLEMouseMoveStrokeWidth
 Stroke width when mouse moving in the element

BUBBLEMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a BUBBLE point anymore

BUBBLEMouseOutAnimationTime
 Animation time when mouse moving out the element

BUBBLEMouseOutColor
 Color when mouse moving out the element

BUBBLEMouseOutOpacity
 Opacity when mouse moving out the element

```
BUBBLEMouseOutStrokeColor
    Stroke color when mouse moving out the element
BUBBLEMouseOutStrokeWidth
    Stroke width when mouse moving out the element
BUBBLEMouseUpDisplay
    Default False, show/not the tooltip when mouse click up a BUBBLE point
BUBBLEMouseUpColor
    Color when mouse moving up the element
BUBBLEMouseUpOpacity
    Opacity when mouse moving up the element
BUBBLEMouseUpStrokeColor
    Stroke color when mouse moving up the element
BUBBLEMouseUpStrokeWidth
    Stroke width when mouse moving up the element
BUBBLEMouseOverDisplay
    Default False, show/not the tooltip when mouse hover on a BUBBLE point
BUBBLEMouseOverColor
    Color when mouse moving over the element
BUBBLEMouseOverOpacity
    Opacity when mouse moving over the element
BUBBLEMouseOverStrokeColor
    Stroke color when mouse moving over the element
BUBBLEMouseOverStrokeWidth
    Stroke width when mouse moving over the element
BUBBLEMouseOverToolipsSetting
    Default "style1"
BUBBLEMouseOverToolipsHtml
    Default ""
BUBBLEMouseOverToolipsPosition
    Default "absolute"
BUBBLEMouseOverToolipsBackgroundColor
    Default "white"
BUBBLEMouseOverToolipsBorderStyle
    Default "solid"
BUBBLEMouseOverToolipsBorderWidth
    Default 0
BUBBLEMouseOverToolipsPadding
    Default "3px"
BUBBLEMouseOverToolipsBorderRadius
    Default "3px"
BUBBLEMouseOverToolipsOpacity
    Default 0.8
SNPxlink      Default False, add/not xlink for SNP module
SNPMouseEvent Default True, open/not open mouse event of SNP module
SNPMouseCombinationEvent
    Default False, open/not COMBINATION module for SNP module
SNPMouseCombinationImageDisplay
    Default False, open/not image display in COMBINATION module for SNP
    module
```

```

SNPMouseCombinationImageTitle
    Title of the image
SNPMouseCombinationImageTitleSize, SNPMouseCombinationImageTitleWeight,
SNPMouseCombinationImageTitleColor
    Size, weight and color of the title
SNPMouseCombinationImagePositionX, SNPMouseCombinationImagePositionY
    Coordinates for image
SNPMouseCombinationImageHeight, SNPMouseCombinationImageWidth
    Height and width of image
SNPMouseCombinationGraphDisplay
    Defalut False, open/not graph display in COMBINATION module for SNP mod-
    ule
SNPMouseCombinationGraphTitle
    Title of the graph
SNPMouseCombinationGraphTitleSize, SNPMouseCombinationGraphTitleWeight,
SNPMouseCombinationGraphTitleColor
    Size, weight and color of the title
SNPMouseCombinationGraphType
    Type of graph
SNPMouseCombinationGraphPositionX, SNPMouseCombinationGraphPositionY
    Coordinates for graph
SNPMouseCombinationGraphHeight, SNPMouseCombinationGraphWidth
    Height and width for graph
SNPMouseCombinationGraphHistogramBarColor
    Bar color of histogram graph
SNPMouseCombinationGraphHistogramPadding
    Padding between bar of histogram graph
SNPMouseCombinationGraphHistogramPositionCorrectX
    Correction distance of X axis in histogram
SNPMouseCombinationGraphPieAutoColor
    Whether use auto color for pie graph or not
SNPMouseCombinationGraphPieColor
    Color for pie graph if auto color is false
SNPMouseCombinationGraphPieSize
    Size of pie graph
SNPMouseCombinationGraphPieStroke
    Whether each pie has a stroke or not
SNPMouseCombinationGraphPieStrokeColor, SNPMouseCombinationGraphPieStrokeWidth
    The stroke color and width for pie graph
SNPMouseCombinationGraphPieOpacity
    Opacity for pie graph
SNPMouseCombinationGraphLineType, SNPMouseCombinationGraphLineColor,
SNPMouseCombinationGraphLineWidth
    Line type, color and width for line graph
SNPMouseCombinationGraphLinePoint
    Whether display the broken point in line graph
SNPMouseCombinationGraphLinePointSize
    Size of broken point

```

SNPMouseCombinationGraphLinePointAutoColor
 Whether display the broken point in auto color
SNPMouseCombinationGraphLinePointColor
 Color for broken point if auto color is false
SNPMouseCombinationGraphLinePointStroke
 Whether display the broken point stroke
SNPMouseCombinationGraphLinePointStrokeColor,
SNPMouseCombinationGraphLinePointStrokeWidth
 The stroke color and width for broken point
SNPMouseCombinationGraphLinePointOpacity
 Opacity for broken line
SNPMouseCombinationGraphLinePositionCorrectX
 Correction distance of X axis for line
SNPMouseCombinationTextDisplay
 Defalut False, open/not text display in COMBINATION module for SNP module
SNPMouseCombinationTextColor, **SNPMouseCombinationTextSize,**
SNPMouseCombinationTextWeight
 The color, size and weight for text
SNPMouseCombinationTextPositionCorrectX, SNPMouseCombinationTextPositionCorrectY
 The coordinates for text
SNPMouseClickDisplay
 Default False, show/not the tooltip when mouse click on a SNP point
SNPMouseClickColor
 Color after clicking the element
SNPMouseClickCircleSize
 Circle size after clicking the element
SNPMouseClickCircleOpacity
 Opacity after clicking the element
SNPMouseClickCircleStrokeColor
 Stroke color after clicking the element
SNPMouseClickCircleStrokeWidth
 Stroke width after clicking the element
SNPMouseClickTextFromData
 First,second,third,fourth column data click to show
SNPMouseClickTextOpacity
 Text opacity after clicking the element
SNPMouseClickTextColor
 Text color after clicking the element
SNPMouseClickTextSize
 Text size after clicking the element
SNPMouseClickTextPostionX, SNPMouseClickTextPostionY
 Text coordinate after clicking the element
SNPMouseClickTextDrag
 Whether text is draggable for element
SNPMouseDownDisplay
 Default False, show/not the tooltip when mouse click down a SNP point
SNPMouseDownColor
 Color after mouse moving down the element

SNPMouseDownCircleSize
 Circle size after mouse moving down the element
SNPMouseDownCircleOpacity
 Circle opacity after mouse moving down the element
SNPMouseDownCircleStrokeColor
 Circle stroke color after mouse moving down the element
SNPMouseDownCircleStrokeWidth
 Circle stroke width after mouse moving down the element
SNPMouseEnterDisplay
 Default False, show/not the tooltip when mouse mover over a SNP point
SNPMouseEnterColor
 Color after mouse entering enter the element
SNPMouseEnterCircleSize
 Circle size after mouse entering the element
SNPMouseEnterCircleOpacity
 Circle opacity after mouse entering the element
SNPMouseEnterCircleStrokeColor
 Circle stroke color after mouse entering the element
SNPMouseEnterCircleStrokeWidth
 Circle stroke width after mouse entering the element
SNPMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a SNP point
SNPMouseLeaveColor
 Color after mouse leaving the element
SNPMouseLeaveCircleSize
 Circle size after mouse leaving the element
SNPMouseLeaveCircleOpacity
 Circle opacity after mouse leaving the element
SNPMouseLeaveCircleStrokeColor
 Circle stroke color after mouse leaving the element
SNPMouseLeaveCircleStrokeWidth
 Circle stroke width after mouse leaving the element
SNPMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a SNP point
SNPMouseMoveColor
 Color after mouse moving in the element
SNPMouseMoveCircleSize
 Circle size after mouse moving in the element
SNPMouseMoveCircleOpacity
 Circle opacity after mouse moving in the element
SNPMouseMoveCircleStrokeColor
 Circle stroke color after mouse moving in the element
SNPMouseMoveCircleStrokeWidth
 Circle stroke width after mouse moving in the element
SNPMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a SNP point anymore
SNPMouseOutAnimationTime
 Animation time when mouse moving over the element

SNPMouseOutColor
Color when mouse moving over the element
SNPMouseOutCircleSize
Circle size when mouse moving over the element
SNPMouseOutCircleOpacity
Opacity when mouse moving over the element
SNPMouseOutCircleStrokeColor
Stroke color when mouse moving over the element
SNPMouseOutCircleStrokeWidth
Stroke width when mouse moving over the element
SNPMouseUpDisplay
Default False, show/not the tooltip when mouse click up a SNP point
SNPMouseUpColor
Color after mouse moving up the element
SNPMouseUpCircleSize
Circle size after mouse moving up the element
SNPMouseUpCircleOpacity
Circle opacity after mouse moving up the element
SNPMouseUpCircleStrokeColor
Circle stroke color after mouse moving up the element
SNPMouseUpCircleStrokeWidth
Circle stroke width after mouse moving up the element
SNPMouseOverDisplay
Default False, show/not the tooltip when mouse hover on a SNP point
SNPMouseOverColor
Color after mouse moving over the element
SNPMouseOverCircleSize
Circle size after mouse moving over the element
SNPMouseOverCircleOpacity
Circle opacity after mouse moving over the element
SNPMouseOverCircleStrokeColor
Circle stroke color after mouse moving over the element
SNPMouseOverCircleStrokeWidth
Circle stroke width after mouse moving over the element
SNPMouseOverToolipsSetting
Default "chr : "
SNPMouseOverToolipsHtml
Default ""
SNPMouseOverToolipsPosition
Position for tooltips when mouse moving over
SNPMouseOverToolipsBackgroundColor
Background color for tooltips when mouse moving over
SNPMouseOverToolipsBorderStyle
Border style for tooltips when mouse moving over
SNPMouseOverToolipsBorderWidth
Border width for tooltips when mouse moving over
SNPMouseOverToolipsPadding
Padding for tooltips when mouse moving over

SNPMouseOverTooltipsBorderRadius
 Border radius for tooltips when mouse moving over
SNPMouseOverTooltipsOpacity
 Opacity for tooltips when mouse moving over
LINKxlink Default False, add/not xlink for LINK module
LINKMouseEvent Default True, open/not open mouse event of LINK module
LINKMouseClickDisplay
 Default False, show/not the tooltip when mouse click on a LINK point
LINKMouseClickOpacity
 Opacity when mouse clicking
LINKMouseClickStrokeColor
 Stroke color when mouse clicking
LINKMouseClickStrokeWidth
 Stroke width when mouse clicking
LINKMouseDownDisplay
 Default False, show/not the tooltip when mouse click down a LINK point
LINKMouseDownOpacity
 Opacity when mouse moving down the element
LINKMouseDownStrokeColor
 Stroke color when mouse moving down the element
LINKMouseDownStrokeWidth
 Stroke width when mouse moving down the element
LINKMouseEnterDisplay
 Default False, show/not the tooltip when mouse mover over a LINK point
LINKMouseEnterOpacity
 Opacity when mouse entering the element
LINKMouseEnterStrokeColor
 Stroke color when mouse entering the element
LINKMouseEnterStrokeWidth
 Stroke width when mouse entering the element
LINKMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a LINK point
LINKMouseLeaveOpacity
 Opacity when mouse leaving the element
LINKMouseLeaveStrokeColor
 Stroke color when mouse leaving the element
LINKMouseLeaveStrokeWidth
 Stroke width when mouse leaving the element
LINKMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a LINK point
LINKMouseMoveOpacity
 Opacity when mouse moving in the element
LINKMouseMoveStrokeColor
 Stroke color when mouse moving in the element
LINKMouseMoveStrokeWidth
 Stroke width when mouse moving in the element
LINKMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a LINK point anymore

```

LINKMouseOutAnimationTime
    Animation time when mouse moving out the element
LINKMouseOutOpacity
    Opacity when mouse moving out the element
LINKMouseOutStrokeColor
    Stroke color when mouse moving out the element
LINKMouseOutStrokeWidth
    Stroke width when mouse moving out the element
LINKMouseUpDisplay
    Default False, show/not the tooltip when mouse click up a LINK point
LINKMouseUpOpacity
    Opacity when mouse moving up the element
LINKMouseUpStrokeColor
    Stroke color when mouse moving up the element
LINKMouseUpStrokeWidth
    Stroke width when mouse moving up the element
LINKMouseOverDisplay
    Default False, show/not the tooltip when mouse hover on a LINK point
LINKMouseOverOpacity
    Opacity when mouse moving over the element
LINKMouseOverStrokeColor
    Stroke color when mouse moving over the element
LINKMouseOverStrokeWidth
    Stroke width when mouse moving over the element
LINKMouseOverToolipsSetting
    Default "style1"
LINKMouseOverToolipsHtml
    Default ""
LINKMouseOverToolipsPosition

LINKMouseOverToolipsPadding
    Default "3px"
LINKMouseOverToolipsBorderRadius
    Default "3px"
LINKMouseOverToolipsOpacity
    Default 0.8
LINKLabelDragEvent
    Default False, dragable for the label of LINK module
CHORDMouseEvent
    Default True, open/not open mouse event of CHORD module from NG-Circos
CHORDMouseFillColorExcluded
    A type of color in character, chord in this color will be hided

```

CHORDMouseClickDisplay
 Default False, show/not the tooltip when mouse click on a CHORD point

CHORDMouseClickOpacity
 Opacity when mouse clicking

CHORDMouseClickStrokeColor
 Stroke color when mouse clicking

CHORDMouseClickStrokeWidth
 Stroke width when mouse clicking

CHORDMouseDownDisplay
 Default False, show/not the tooltip when mouse click down a CHORD point

CHORDMouseDownOpacity
 Opacity when mouse moving down the element

CHORDMouseDownStrokeColor
 Stroke color when mouse moving down the element

CHORDMouseDownStrokeWidth
 Stroke width when mouse moving down the element

CHORDMouseEnterDisplay
 Default False, show/not the tooltip when mouse mover over a CHORD point

CHORDMouseEnterOpacity
 Opacity when mouse entering the element

CHORDMouseEnterStrokeColor
 Stroke color when mouse entering the element

CHORDMouseEnterStrokeWidth
 Stroke width when mouse entering the element

CHORDMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a CHORD point

CHORDMouseLeaveOpacity
 Opacity when mouse leaving the element

CHORDMouseLeaveStrokeColor
 Stroke color when mouse leaving the element

CHORDMouseLeaveStrokeWidth
 Stroke width when mouse leaving the element

CHORDMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a CHORD point

CHORDMouseMoveOpacity
 Opacity when mouse moving in the element

CHORDMouseMoveStrokeColor
 Stroke color when mouse moving in the element

CHORDMouseMoveStrokeWidth
 Stroke width when mouse moving in the element

CHORDMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a CHORD point anymore

CHORDMouseOutAnimationTime
 Animation time when mouse moving out the element

CHORDMouseOutOpacity
 Opacity when mouse moving out the element

CHORDMouseOutStrokeColor
 Stroke color when mouse moving out the element
CHORDMouseOutStrokeWidth
 Stroke width when mouse moving out the element
CHORDMouseUpDisplay
 Default False, show/not the tooltip when mouse click up a CHORD point
CHORDMouseUpOpacity
 Opacity when mouse moving up the element
CHORDMouseUpStrokeColor
 Stroke color when mouse moving up the element
CHORDMouseUpStrokeWidth
 Stroke width when mouse moving up the element
CHORDMouseOverDisplay
 Default False, show/not the tooltip when mouse hover on a CHORD point
CHORDMouseOverOpacity
 Opacity when mouse moving over the element
CHORDMouseOverStrokeColor
 Stroke color when mouse moving over the element
CHORDMouseOverStrokeWidth
 Stroke width when mouse moving over the element
HISTOGRAMxlink Default False, add/not xlink for HISTOGRAM module
HISTOGRAMMouseEvent
 Default True, open/not open mouse event of HISTOGRAM module
HISTOGRAMMouseClickDisplay
 Default False, show/not the tooltip when mouse click on a HISTOGRAM point
HISTOGRAMMouseClickColor
 Color when mouse clicking
HISTOGRAMMouseClickOpacity
 Opacity when mouse clicking
HISTOGRAMMouseClickStrokeColor
 Stroke color when mouse clicking
HISTOGRAMMouseClickStrokeWidth
 Stroke width when mouse clicking
HISTOGRAMMouseDownDisplay
 Default False, show/not the tooltip when mouse click down a HISTOGRAM point
HISTOGRAMMouseDownColor
 Color when mouse moving down the element
HISTOGRAMMouseDownOpacity
 Opacity when mouse moving up the element
HISTOGRAMMouseDownStrokeColor
 Stroke color when mouse moving up the element
HISTOGRAMMouseDownStrokeWidth
 Stroke width when mouse moving up the element
HISTOGRAMMouseEnterDisplay
 Default False, show/not the tooltip when mouse mover over a HISTOGRAM point

HISTOGRAMMouseEnterColor
 Color when mouse entering the element

HISTOGRAMMouseEnterOpacity
 Opacity when mouse entering the element

HISTOGRAMMouseEnterStrokeColor
 Stroke color when mouse entering the element

HISTOGRAMMouseEnterStrokeWidth
 Stroke width when mouse entering the element

HISTOGRAMMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a HISTOGRAM point

HISTOGRAMMouseLeaveColor
 Color when mouse leaving the element

HISTOGRAMMouseLeaveOpacity
 Opacity when mouse leaving the element

HISTOGRAMMouseLeaveStrokeColor
 Stroke color when mouse leaving the element

HISTOGRAMMouseLeaveStrokeWidth
 Stroke width when mouse leaving the element

HISTOGRAMMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a HISTOGRAM point

HISTOGRAMMouseMoveColor
 Color when mouse moving in the element

HISTOGRAMMouseMoveOpacity
 Opacity when mouse moving in the element

HISTOGRAMMouseMoveStrokeColor
 Stroke color when mouse moving in the element

HISTOGRAMMouseMoveStrokeWidth
 Stroke width when mouse moving in the element

HISTOGRAMMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a HISTOGRAM point anymore

HISTOGRAMMouseOutAnimationTime
 Animation time when mouse moving out the element

HISTOGRAMMouseOutColor
 Color when mouse moving out the element

HISTOGRAMMouseOutOpacity
 Opacity when mouse moving out the element

HISTOGRAMMouseOutStrokeColor
 Stroke color when mouse moving out the element

HISTOGRAMMouseOutStrokeWidth
 Stroke width when mouse moving out the element

HISTOGRAMMouseUpDisplay
 Default False, show/not the tooltip when mouse click up a HISTOGRAM point

HISTOGRAMMouseUpColor
 Color when mouse moving up the element

HISTOGRAMMouseUpOpacity
 Opacity when mouse moving up the element

```
HISTOGRAMMouseUpStrokeColor
    Stroke color when mouse moving up the element
HISTOGRAMMouseUpStrokeWidth
    Stroke width when mouse moving up the element
HISTOGRAMMouseOverDisplay
    Default False, show/not the tooltip when mouse hover on a HISTOGRAM point
HISTOGRAMMouseOverColor
    Color when mouse moving over the element
HISTOGRAMMouseOverOpacity
    Opacity when mouse moving over the element

GENEMouseOverToolipsBorderStyle
 Default "solid"
GENEMouseOverToolipsBorderWidth
 Default 0
GENEMouseOverToolipsPadding
 Default "3px"
GENEMouseOverToolipsBorderRadius
 Default "3px"
GENEMouseOverToolipsOpacity
 Default 0.8
LOLLIPOPxlink Default False, add/not xlink for LOLLIPOP module
LOLLIPOPMouseEvent
 Default True, open/not open mouse event of LOLLIPOP module

LOLLIPOPMouseClickDisplay
Default False, show/not the tooltip when mouse click on a LOLLIPOP point

LOLLIPOPMouseClickColor
Color when mouse clicking

LOLLIPOPMouseClickCircleSize
Circle size when mouse clicking the element

LOLLIPOPMouseClickCircleOpacity
Circle opacity when mouse clicking the element

LOLLIPOPMouseClickCircleStrokeColor
Circle stroke color when mouse clicking the element

LOLLIPOPMouseClickCircleStrokeWidth
Circle stroke width when mouse clicking the element

LOLLIPOPMouseClickTextFromData
Text column when mouse clicking the element

LOLLIPOPMouseClickTextOpacity
Text opacity when mouse clicking the element

LOLLIPOPMouseClickTextColor
Text color when mouse clicking the element

LOLLIPOPMouseClickTextSize
Text size when mouse clicking the element

LOLLIPOPMouseClickTextPositionX, LOLLIPOPMouseClickTextPositionY
Text coordinates when mouse clicking the element

LOLLIPOPMouseClickTextDrag
Whether text is draggable when mouse clicking the element

LOLLIPOPMouseDownDisplay
Default False, show/not the tooltip when mouse click down a LOLLIPOP point

LOLLIPOPMouseDownColor
Color when mouse moving down the element

LOLLIPOPMouseDownCircleSize
Circle size when mouse moving down the element

LOLLIPOPMouseDownCircleOpacity
Circle opacity when mouse moving down the element

LOLLIPOPMouseDownCircleStrokeColor
Circle stroke color when mouse moving down the element

LOLLIPOPMouseDownCircleStrokeWidth
Circle stroke width when mouse moving down the element

LOLLIPOPMouseEnterDisplay
Default False, show/not the tooltip when mouse mover over a LOLLIPOP point

LOLLIPOPMouseEnterColor
Color when mouse entering the element

LOLLIPOPMouseEnterCircleSize
Circle size when mouse entering the element

LOLLIPOPMouseEnterCircleOpacity
Circle opacity when mouse entering the element

LOLLIPOPMouseEnterCircleStrokeColor
Circle stroke color when mouse entering the element

LOLLIPOPMouseEnterCircleStrokeWidth
Circle stroke width when mouse entering the element

LOLLIPOPMouseLeaveDisplay
 Default False, show/not the tooltip when mouse mover leave a LOLLIPOP point

LOLLIPOPMouseLeaveColor
 Color when mouse leaving the element

LOLLIPOPMouseLeaveCircleSize
 Circle size when mouse leaving the element

LOLLIPOPMouseLeaveCircleOpacity
 Circle opacity when mouse leaving the element

LOLLIPOPMouseLeaveCircleStrokeColor
 Circle stroke color when mouse leaving the element

LOLLIPOPMouseLeaveCircleStrokeWidth
 Circle stroke width when mouse leaving the element

LOLLIPOPMouseMoveDisplay
 Default False, show/not the tooltip when mouse move into a LOLLIPOP point

LOLLIPOPMouseMoveColor
 Color when mouse moving in the element

LOLLIPOPMouseMoveCircleSize
 Circle size when mouse moving in the element

LOLLIPOPMouseMoveCircleOpacity
 Circle opacity when mouse moving in the element

LOLLIPOPMouseMoveCircleStrokeColor
 Circle stroke color when mouse moving in the element

LOLLIPOPMouseMoveCircleStrokeWidth
 Circle stroke width when mouse moving in the element

LOLLIPOPMouseOutDisplay
 Defalut False, hide/not tooltip when mouse is not hovering a LOLLIPOP point anymore

LOLLIPOPMouseOutAnimationTime
 Animation time when mouse moving out the element

LOLLIPOPMouseOutColor
 Color when mouse moving out the element

LOLLIPOPMouseOutCircleSize
 Circle size when mouse moving out the element

LOLLIPOPMouseOutCircleOpacity
 Circle opacity when mouse moving out the element

LOLLIPOPMouseOutCircleStrokeColor
 Circle stroke color when mouse moving out the element

LOLLIPOPMouseOutCircleStrokeWidth
 Circle stroke width when mouse moving out the element

LOLLIPOPMouseUpDisplay
 Default False, show/not the tooltip when mouse click up a LOLLIPOP point

LOLLIPOPMouseUpColor
 Color when mouse moving up the element

LOLLIPOPMouseUpCircleSize
 Circle size when mouse moving up the element

LOLLIPOPMouseUpCircleOpacity
 Circle opacity when mouse moving up the element

```

LOLLIPOPMouseUpCircleStrokeColor
    Circle stroke color when mouse moving up the element
LOLLIPOPMouseUpCircleStrokeWidth
    Circle stroke width when mouse moving up the element
LOLLIPOPMouseOverDisplay
    Default False, show/not the tooltip when mouse hover on a LOLLIPOP point
LOLLIPOPMouseOverColor
    Color when mouse moving over the element
LOLLIPOPMouseOverCircleSize
    Circle size when mouse moving over the element
LOLLIPOPMouseOverCircleOpacity
    Circle opacity when mouse moving over the element
LOLLIPOPMouseOverCircleStrokeColor
    Circle stroke color when mouse moving over the element
LOLLIPOPMouseOverCircleStrokeWidth
    Circle stroke width when mouse moving over the element
LOLLIPOPMouseOverToolipsSetting
    Default "style1"

LOLLIPOPMouseOverToolipsPadding
    Default "3px"
LOLLIPOPMouseOverToolipsBorderRadius
    Default "3px"
LOLLIPOPMouseOverToolipsOpacity
    Default 0.8
elementId      the name of the HTML id to be used to contain the visualization
...            Ignored

```

Value

The main figure for interacCircos with all tracks

Examples

```
Circos(genome = "hg19")
```

CircosArc*ARC module*

Description

Create the CNV plot without value, Gene domain, Chromosome band

Usage

```
CircosArc(  
  modulename,  
  compareGroup = 1,  
  outerRadius = 150,  
  innerRadius = 130,  
  opacity = 1,  
  animationDisplay = FALSE,  
  animationTime = 2000,  
  animationDelay = 20,  
  animationType = "bounce",  
  data,  
  ...  
)
```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
innerRadius, outerRadius	Where the module should begin and end
opacity	The opacity for arc
animationDisplay	Whether display animation
animationTime, animationDelay, animationType	The time, delay and display type for animation
data	A list of arc with details including chr, start, end, color, des, link and html. Details can be found on document
...	Ignored

Value

The module tracks for arc modules

Examples

```
arcData<-arcExample  
Circos(CircosArc('Arc01', outerRadius = 212, innerRadius = 224, data=arcData),  
genome=list("EGFR"=1211),outerRadius = 220,genomeFillColor = c("grey"))
```

Description

A auxiliary line for better explaination of the visualization

Usage

```
CircosAuxLine(  
    modulename,  
    startX = 20,  
    startY = 20,  
    endX = 120,  
    endY = 120,  
    color = "red",  
    width = 0.5,  
    type = "straight",  
    controlPointX = 0,  
    controlPointY = 0,  
    lineType = "solid",  
    dashArray = 3,  
    marker = TRUE,  
    markerType = "circle",  
    markerColor = "blue",  
    markerHeight = 5,  
    markerWidth = 5,  
    markerPosition = 2,  
    animationDisplay = FALSE,  
    animationTime = 50,  
    animationDelay = 1000,  
    animationType = "linear",  
    ...  
)
```

Arguments

modulename	The name of the new module
startX, startY	Start coordinates for auxiliary line
endX, endY	End coordinates for auxiliary line
color	Color for auxiliary line
width	Width for auxiliary line
type	Type for auxiliary line, could be straight/curve/broken
controlPointX, controlPointY	The middle point coordinates for curve and broken
lineType	Line type, could be solid/dot
dashArray	The dash gap width
marker	Whether display a marker on the end of line

```

markerType      Type of marker, could be circle/square/arrow/stub
markerColor, markerHeight, markerWidth
                  Color, Height and Width for marker
markerPosition  1 means start, 2 means end, 3 means both
animationDisplay
                  whether display animation
animationTime, animationDelay, animationType
                  The time, delay and display type for animation
...
                  Ignored

```

Value

The module tracks for auxiliary line modules

Examples

```
Circos(CircosAuxLine('AuxLine01'))
```

CircosBackground *BACKGROUND module*

Description

Background for better display of other modules

Usage

```

CircosBackground(
  modulename,
  compareGroup = 1,
  fillColors = "#EEEEFF",
  borderColors = "#000000",
  axisShow = FALSE,
  axisColor = "#000",
  axisOpacity = 0.5,
  axisNum = 4,
  axisWidth = 0.3,
  maxRadius = 190,
  minRadius = 105,
  borderSize = 0.3,
  animationDisplay = FALSE,
  animationTime = 2000,
  animationDelay = 20,
  animationType = "bounce",
  ...
)

```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
fillColors	The filling color of the module
borderColors	The border color of the module
axisShow	Whether show a axis or not
axisWidth, axisColor, axisOpacity, axisNum	The color, opacity value and number of line for axis
minRadius, maxRadius	The outer and inner ring range of module
borderSize	The thickness of the border
animationDisplay	Whether display animation or not
animationTime, animationDelay, animationType	The time, delay and display type for animation
...	Ignored

Value

The module tracks for background modules.

Examples

```
Circos(CircosBackground('bg01', fillColors="#FFEEEE", borderSize = 1))
```

CircosBubble

BUBBLE module

Description

Create a bubble plot

Usage

```
CircosBubble(  
    modulename,  
    compareGroup = 1,  
    maxRadius = 200,  
    minRadius = 50,  
    blockStroke = TRUE,  
    blockStrokeColor = "black",  
    blockStrokeWidth = 1,  
    blockFill = FALSE,  
    blockFillColor = "white",  
    bubbleMaxSize = 5,  
    bubbleMinSize = 2,  
    minColor = "red",  
    maxColor = "green",
```

```

ValueAxisManualScale = FALSE,
ValueAxisMaxScale = 10,
ValueAxisMinScale = 0,
totalLayer = 1,
animationDisplay = FALSE,
animationTime = 2000,
animationDelay = 20,
animationType = "bounce",
data,
...
)

```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
maxRadius, minRadius	The outer and inner ring range of module
blockStroke	Whether display the stroke between each bubble block
blockStrokeColor	Stroke color for block
blockStrokeWidth	Stroke width for block
blockFill	Whether fill a block or not
blockFillColor	The color for filling the block
bubbleMaxSize	The max size for bubble
bubbleMinSize	The min size for bubble
minColor	The color the bubble of min value
maxColor	The color the bubble of max value
ValueAxisManualScale	Whether manually control the scale of value
ValueAxisMaxScale, ValueAxisMinScale	The max and min scale value for manually control
totalLayer	The color and width for stroke
animationDisplay	Whether display animation
animationTime, animationDelay, animationType	The time, delay and display type for animation
data	A list of value in bubble plot with details including chr, start, end, value, name, layer, color and html. Details can be found on document
...	Ignored

Value

The module tracks for bubble modules

Examples

```
bubbleData<-bubbleExample
Circos(CircosBubble('Bubble01', maxRadius = 230, minRadius = 170, data=bubbleData,
blockStroke = TRUE, bubbleMaxSize =10, bubbleMinSize = 2, maxColor = "red", minColor = "yellow",
totalLayer =3, animationDisplay = TRUE, animationType="linear"),
genome = list("2L"=23011544,"2R"=21146708,"3L"=24543557,"3R"= 27905053,"X"=22422827,"4"=1351857),
BUBBLEMouseOverDisplay =TRUE,innerRadius = 236)
```

CircosChord

CHORD module of NG-Circos

Description

Create a chord module using a data matrix

Usage

```
CircosChord(
  modulename,
  innerRadius = 237,
  outerRadius = 238,
  fillOpacity = 0.67,
  fillStrokeWidth = 1,
  padding = 0.06,
  autoFillColor = TRUE,
  fillColor = c("#B8B8B8"),
  fillStrokeColor = c("black"),
  outerARC = TRUE,
  outerARCAutoColor = TRUE,
  outerARCColor = c("red"),
  outerARCStrokeColor = c("black"),
  outerARCText = TRUE,
  data,
  ...
)
```

Arguments

modulename	The name of the new module
innerRadius	The inner radius for chord circle
outerRadius	The outer radius for chord circle
fillOpacity	The opacity for filling color
fillStrokeWidth	The stroke width for chord
padding	The pad of chord
autoFillColor	Whether auto assign color for chord
fillColor	If not, manually assign color for chord

```

fillStrokeColor
    The color for stroke
outerARC      Whether display outer arc
outerARCAutoColor
    If true, whether auto assign color for arc
outerARCColor The manullay assigned color for arc
outerARCStrokeColor
    The stroke color for arc
outerARCText  Whether display text for arc or not
data          A matrix-list of chord value with relationship details
...
    Ignored

```

Value

The module tracks for chord modules of NG-Circos

Examples

```

chordData<-chordExample
Circos(CircosChord('CHORD', data = chordData, innerRadius= 210,outerRadius= 211,fillOpacity=0.67,
strokeColor="black",strokeWidth= "1px",outerARCText=FALSE),genome=list("C.CK" = 189.51,"C.NPK"=188,
"GC.CK"=186.11, "GC.NPK"=191.51,"Alphaproteobacteria"=70.16,"Betaproteobacteria"=23.51,
"Gammaproteobacteria"=25.51, "Deltaproteobacteria"=23.28,"Acidobacteria"=53.62,
"Actinobacteria"=72.33, "Bacteroidetes"=22.41, "Chloroflexi"=15.08,"Firmicutes"=10.72,
"Gemmatimonadetes"=26.37, "Planctomycetes"=19.26,"Thaumarchaeota"=6.15, "Verrucomicrobia"=8.3,
"Ascomycota"=159.41, "Basidiomycota"=79.73,"Zygomycota"=139.29 ),outerRadius = 217,
genomeLabelDisplay = FALSE)

```

Description

Create a chord module using a data path. chord.p means chord plot based on path

Usage

```

CircosChord.p(
  modulename,
  radius = 216,
  opacity = 0.67,
  color = "#B8B8B8",
  data,
  ...
)

```

Arguments

modulename	The name of the new module
radius	The radius for chord circle
opacity	The opacity for chord
color	The color for chord
data	A list of chord value with relationship details, details could be found on chord.pExample
...	Ignored

Value

The module tracks for chord modules of circosJS

Examples

```
chord.pData<-chord.pExample  
Circos()
```

CircosCnv

CNV module

Description

Create a copy number variance module

Usage

```
CircosCnv(  
  modulename,  
  compareGroup = 1,  
  maxRadius = 200,  
  minRadius = 190,  
  width = 10,  
  color = "#CAE1FF",  
  ValueAxisManualScale = FALSE,  
  ValueAxisMaxScale = 10,  
  ValueAxisMinScale = 0,  
  strokeColor = "black",  
  strokeWidth = 1,  
  opacity = 1,  
  animationDisplay = FALSE,  
  animationTime = 2000,  
  animationDelay = 50,  
  animationType = "bounce",  
  data,  
  ...  
)
```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
maxRadius, minRadius	The outer and inner ring range of module
width	Width for CNV module
color	Color for CNV module
ValueAxisManualScale	Whether manually control the scale of value or not
ValueAxisMaxScale, ValueAxisMinScale	The max and min scale value for manually control
strokeColor, strokeWidth	The color and width for stroke
opacity	The opacity for module
animationDisplay	Whether display animationn
animationTime, animationDelay, animationType	The time, delay and display type for animationn
data	A list of CNV with details including start, end, value, link, color and html. Details can be found on document
...	Ignored

Value

The module tracks for cnv modules

Examples

```
cnvData<-cnvExample
Circos(CircosCnv('Cnv01',maxRadius =175, minRadius =116, data =cnvData,width=2,color = "#4876FF")+
CircosBackground("bg01",minRadius = 116,maxRadius = 175,fillColors = "#F2F2F2",axisShow = TRUE),
CNVMouseOverDisplay = TRUE)
```

Description

Create a number of genes with different functional region

Usage

```
CircosGene(
  modulename,
  compareGroup = 1,
  outerRadius = 180,
  innerRadius = 150,
  pathColor = "black",
  pathWidth = 1,
  arrow = TRUE,
  arrowGap = 2,
  arrowColor = "blue",
  arrowSize = 5,
  cdsColor = "#1e77b3",
  cdsStrokeColor = "black",
  cdsStrokeWidth = 1,
  utrWidth = -5,
  utrColor = "blue",
  utrStrokeColor = "blue",
  utrStrokeWidth = 1,
  animationDisplay = FALSE,
  animationTime = 2000,
  animationDelay = 20,
  animationType = "bounce",
  data,
  ...
)
```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
outerRadius, innerRadius	Where the module should begin and end
pathColor	The color for path between gene elements
pathWidth	The width for path between gene elements
arrow	Whether display arrows on path
arrowGap, arrowColor, arrowSize	The gap, color and size for arrow
cdsColor, cdsStrokeColor, cdsStrokeWidth	The color, stroke color and stroke width for coding
utrWidth, utrColor, utrStrokeColor, utrStrokeWidth	The max size for bubble
animationDisplay	Whether display animation
animationTime, animationDelay, animationType	The time, delay and display type for animation
data	A list of gene with details including chr, strand, start, end, type, name, link and html. Details can be found on document
...	Ignored

Value

The module tracks for gene modules

Examples

```
geneData<-geneExample
Circos(CircosGene('Gene01', outerRadius = 195, innerRadius = 180, data=geneData,arrowGap = 10,
arrowColor = "black",arrowSize = "12px",cdsColor = "#1e77b3",cdsStrokeColor = "#1e77b3",
cdsStrokeWidth= 5, utrWidth= -2,utrColor= "#fe7f0e",utrStrokeColor= "#fe7f0e",
animationDisplay = TRUE),genome =list("EGFR"=1000), outerRadius = 220)
```

CircosHeatmap

*HEATMAP module***Description**

Create a heatmap plot

Usage

```
CircosHeatmap(
  modulename,
  compareGroup = 1,
  maxRadius = 180,
  minRadius = 100,
  minColor = "red",
  maxColor = "green",
  ValueAxisManualScale = FALSE,
  ValueAxisMaxScale = 10,
  ValueAxisMinScale = 0,
  totalLayer = 1,
  animationDisplay = FALSE,
  animationDirection = "O2I",
  animationColorDirection = "L2C",
  animationTime = 2000,
  animationDelay = 20,
  animationType = "bounce",
  data,
  ...
)
```

Arguments

<code>modulename</code>	The name of the new module
<code>compareGroup</code>	The group number of this module in compare module
<code>maxRadius, minRadius</code>	Where the module should begin and end
<code>minColor</code>	The color for heatmap of min value
<code>maxColor</code>	The color for heatmap of max value

```

ValueAxisManualScale
    Whether manually control the scale of value
ValueAxisMaxScale, ValueAxisMinScale
    The max and min scale value for manually control
totalLayer      The color and width for stroke
animationDisplay
    Whether display animation
animationDirection
    The direction for animation. O2I: from outside to inside, I2O: from inside to
    outside
animationColorDirection
    The color changing in animation. L2C: lowest to customized, H2C: highest to
    customized, the customized color should be defined in data
animationTime, animationDelay, animationType
    The time, delay and display type for animation
data
    A list of value in heatmap plot with details including chr, start, end, value, name,
    layer and html. Details can be found on document
...
    Ignored

```

Value

The module tracks for heatmap modules.

Examples

```

heatmapData<-heatmapExample
Circos(CircosHeatmap('Heatmap01', maxRadius= 180, minRadius = 100, data=heatmapData, totalLayer = 3),
genome = list("2L"=23011544,"2R"=21146708,"3L"=24543557,"3R"=27905053,"4"=1351857,"X"=22422827),
HEATMAPMouseEvent = TRUE,HEATMAPMouseOverDisplay = TRUE)

```

Description

Create a multi-layer histogram plot

Usage

```

CircosHistogram(
  modulename,
  compareGroup = 1,
  maxRadius = 108,
  minRadius = 95,
  ValueAxisManualScale = FALSE,
  ValueAxisMaxScale = 10,
  ValueAxisMinScale = 0,
  fillColor = "red",
  animationDisplay = FALSE,

```

```

animationTime = 2000,
animationDelay = 20,
data,
...
)

```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
maxRadius, minRadius	Where the module should begin and end
ValueAxisManualScale	Whether manually control the scale of value
ValueAxisMaxScale, ValueAxisMinScale	The max and min scale value for manually control
fillColor	The color for histogram
animationDisplay	Whether display animation
animationTime, animationDelay	The time and delay for animation
data	A list of value with details including chr, start, end, name, link, value and html. Details can be found on document
...	Ignored

Value

The module tracks for histogram modules

Examples

```

histogramData<-histogramExample
Circos(CircosHistogram('HISTOGRAM01', data = histogramData, fillColor= "#ff7f0e", maxRadius = 210,
minRadius = 175), genome=list("2L"=23011544, "2R"=21146708, "3L"=24543557, "3R"= 27905053,
"X"=22422827, "4"=1351857),
outerRadius = 220)

```

Description

Simple legend annotation displayed in the visualization

Usage

```
CircosLegend(
  modulename,
  x = 20,
  y = 20,
  title = "legend",
  size = 6,
  weight = "normal",
  GapBetweenGraphicText = 5,
  GapBetweenLines = 20,
  data,
  ...
)
```

Arguments

modulename	The name of the new module
x, y	The coordinates if legend
title	The title for legend
size	Font size for title
weight	Font weight for title. Should be either "normal", "bold", "bolder" or "lighter"
GapBetweenGraphicText	Gap between icon and text in legend
GapBetweenLines	Gap between each two lines in legend
data	A list of legend with details including type, color, opacity, circleSize, rectSize, lineWidth, lineHeight, text, textSize and textWeight. Details can be found on document
...	Ignored

Value

The module tracks for legend modules.

Examples

```
legend1 <- list(type= "circle", color="#1E77B4",opacity="1.0",circleSize="8",text= "C.CK",
textSize= "14",textWeight="normal")
legend2 <- list(type= "circle", color="#AEC7E8",opacity="1.0",circleSize="8",text= "C.NPK",
textSize= "14",textWeight="normal")
Circos(CircosLegend('legend01', title = "legend",data=list(legend1,legend2),size = 20))
```

CircosLine*LINE module*

Description

Create a multi-layer line plot

Usage

```
CircosLine(
    modulename,
    compareGroup = 1,
    maxRadius = 108,
    minRadius = 95,
    ValueAxisManualScale = FALSE,
    ValueAxisMaxScale = 10,
    ValueAxisMinScale = 0,
    color = "red",
    width = 2,
    type = "cardinal",
    animationDisplay = FALSE,
    animationDirection = "S2E",
    animationTime = 2000,
    animationDelay = 20,
    animationType = "bounce",
    data,
    ...
)
```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
maxRadius, minRadius	Where the module should begin and end
ValueAxisManualScale	Whether manually control the scale of value
ValueAxisMaxScale, ValueAxisMinScale	The max and min scale value for manually control
color	Color for line
width	Width for line
type	Type for line, could be linear, cardinal, basis and monotone
animationDisplay	Whether display animation
animationDirection	The direction of animation, could be S2E(start to end) or E2S(end to start)
animationTime, animationDelay, animationType	The time, delay and display type for animation

data	A list of value with details including chr, pos, des, value and html. Details can be found on document
...	Ignored

Value

The module tracks for line modules

Examples

```
lineData<-lineExample  
Circos(CircosLine('LINE01', data = lineData,maxRadius=200,minRadius=150,color= "#ff0031") +  
CircosBackground('BG01',minRadius = 205,maxRadius = 150))
```

CircosLink

LINK module

Description

Create a link of two specific region in genome

Usage

```
CircosLink(  
  modulename,  
  compareGroup = 1,  
  radius = 108,  
  fillColor = "red",  
  width = 3,  
  type = "Q",  
  displayLinkAxis = TRUE,  
  axisColor = "#B8B8B8",  
  axisWidth = 0.5,  
  axisPad = 3,  
  displayLinkLabel = TRUE,  
  labelColor = "red",  
  labelSize = 13,  
  labelPad = 8,  
  animationDisplay = FALSE,  
  animationDirection = "1to2",  
  animationTime = 2000,  
  animationDelay = 20,  
  animationType = "bounce",  
  data,  
  ...  
)
```

Arguments

<code>modulename</code>	The name of the new module
<code>compareGroup</code>	The group number of this module in compare module
<code>radius</code>	Radius of link circle
<code>fillColor</code>	Color for link
<code>width</code>	Width for link
<code>type</code>	Type of link, could be Q/S/T
<code>displayLinkAxis</code>	Whether display axis for link or not
<code>axisColor</code>	The color for axis
<code>axisWidth</code>	The width for axis
<code>axisPad</code>	The pad for axis
<code>displayLinkLabel</code>	Whether display label for link or not
<code>labelColor</code>	The color for label
<code>labelSize</code>	The size for label
<code>labelPad</code>	The pad for label
<code>animationDisplay</code>	Whether display animation
<code>animationDirection</code>	The direction of link animation, could be 1to2 or 2to1
<code>animationTime, animationDelay, animationType</code>	The time, delay and display type for animation
<code>data</code>	A list of link with details including g1chr, g1start, g1end, g2chr, g2start, g2end, g1name, g2name, fusion, link and html. Details can be found on document
<code>...</code>	Ignored

Value

The module tracks for link modules

Examples

```
linkData<-linkExample
Circos(CircosLink('LINK', data = linkData, LinkRadius= 140, fillColor= "#9e9ac6", width= 2,
axisPad= 3, labelPad=8, animationDisplay=TRUE, animationDirection="1to2", animationType= "linear" ))
```

CircosLollipop *LOLLIPOP module*

Description

Create a lollipop plot

Usage

```
CircosLollipop(  
    modulename,  
    compareGroup = 1,  
    fillColor = "#9400D3",  
    secondColor = "#FFFFFF",  
    pointType = "circle",  
    circleSize = 2,  
    diamondWidth = 10,  
    diamondHeight = 5,  
    rectWidth = 2,  
    rectHeight = 2,  
    stroke = TRUE,  
    strokeColor = "#000000",  
    strokeWidth = 0.5,  
    lineAutoHeight = TRUE,  
    lineAutoMaximumHeightZoomRate = 1,  
    lineHeightRate = 0.75,  
    lineWidth = 2,  
    lineColor = "#000000",  
    realStart = 0,  
    ValueAxisManualScale = FALSE,  
    ValueAxisMaxScale = 10,  
    ValueAxisMinScale = 0,  
    animationDisplay = FALSE,  
    animationTime = 2000,  
    animationDelay = 20,  
    animationType = "bounce",  
    data,  
    ...  
)
```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
fillColor	Filling color for lollipop
secondColor	Second filling color for heterogeneous lollipop
pointType	The type for lollipop, could be circle, rect and diamond
circleSize	If circle, the size for lollipop
diamondWidth, diamondHeight	If diamond, the width and height for lollipop

```

rectWidth, rectHeight
    If rect, the width and height for lollipop

stroke      Whether display the stroke for lollipop
strokeColor, strokeWidth
    The color and width for stroke

lineAutoHeight Whether auto assign the height for each lollipop
lineAutoMaximumHeightZoomRate
    If auto assign, the zoom rate for each lollipop

lineHeightRate If manually assign, the rate of lollipop compared to real value
lineWidth, lineColor
    The width and color for the line of lollipop

realStart     The real start position for data in genome
ValueAxisManualScale
    Whether manually control the scale of value
ValueAxisMaxScale, ValueAxisMinScale
    The max and min scale value for manually control
animationDisplay
    Whether display animation
animationTime, animationDelay, animationType
    The time, delay and display type for animation
data
    A list of lollipop value with details including protein, chr, pos, strand, Cancer-TypeNumber, color, link, Consequence, AA_pos, AA_change, type, link and html. Details can be found on document
...
    Ignored

```

Value

The module tracks for lollipop modules.

Examples

```

lollipopData<-lollipopExample
arcData<-arcExample
Circos(CircosLollipop('Lollipop01', data=lollipopData, fillColor="#9400D3",
circleSize= 6, strokeColor= "#999999", strokeWidth= "1px", animationDisplay=TRUE, lineWidth= 2,
realStart= 101219350)+CircosArc('Arc01', outerRadius = 212, innerRadius = 224, data=arcData),
genome=list("EGFR"=1211),outerRadius = 220,genomeFillColor = c("grey"))

```

Description

This allows the use of the '+' and '-' operator on these lists

Usage

```
CircosModuleList()  
  
## S3 method for class 'CircosModuleList'  
x + ...  
  
## S3 method for class 'CircosModuleList'  
x - ...
```

Arguments

x The moduleList on which other modules should be added or removed
... The modules to add (as moduleLists) or to remove (as module names)

Value

The list of all tracks of modules.

CircosScatter

SCATTER module

Description

Create a point plot

Usage

```
CircosScatter(  
  modulename,  
  compareGroup = 1,  
  radius = 140,  
  innerCircleSize = 1,  
  outerCircleSize = 5,  
  innerCircleColor = "#F26223",  
  outerCircleColor = "#F26223",  
  innerPointType = "circle",  
  outerPointType = "circle",  
  innerrectWidth = 2,  
  innerrectHeight = 2,  
  outerrectWidth = 2,  
  outerrectHeight = 2,  
  outerCircleOpacity = 1,  
  random_data = 0,  
  animationDisplay = FALSE,  
  animationInitialPositionX = 0,  
  animationInitialPositionY = 0,  
  animationTime = 2000,  
  animationDelay = 20,  
  animationType = "bounce",  
  data,  
  ...  
)
```

Arguments

modulename The name of the new module
 compareGroup The group number of this module in compare module
 radius Radius of scatter circle
 innerCircleSize, outerCircleSize
 If circle, inner and outer circle size
 innerCircleColor, outerCircleColor
 If circle, inner and outer circle color
 innerPointType, outerPointType
 The type for inner and outer point, could be circle or rect
 innerrectWidth, innerrectHeight
 If rect, inner width and height
 outerrectWidth, outerrectHeight
 If rect, inner width and height
 outerCircleOpacity
 If circle, the opacity for outer circle
 random_data Scatter position fluctuation
 animationDisplay
 Whether display animation
 animationInitialPositionX, animationInitialPositionY
 The initial coordinates for animation
 animationTime, animationDelay, animationType
 The time, delay and display type for animation
 data A list of value with details including chr, start, end, name, des, link and html.
 Details can be found on document
 ... Ignored

Value

The module tracks for scatter modules

Examples

```

scatterData<-scatterExample
Circos(CircosScatter('SCATTER01', data = scatterData, radius=180, innerCircleColor= "#3d6390",
outerCircleColor= "#99cafe", random_data= 40))
  
```

Description

Create SNPs are defined by genomic coordinates and associated with a numerical value

Usage

```
CircosSnp(
  modulename,
  compareGroup = 1,
  minRadius = 153,
  maxRadius = 205,
  fillColorType = "specific",
  fillColor = "#9400D3",
  fillr2Color = c("13#ff0031", "#ff0031", "#ff0031", "#ff0031", "#ff0031"),
  ValueAxisManualScale = FALSE,
  ValueAxisMaxScale = 10,
  ValueAxisMinScale = 0,
  pointType = "circle",
  circleSize = 2,
  rectWidth = 2,
  rectHeight = 2,
  animationDisplay = FALSE,
  animationInitialPositionX = 0,
  animationInitialPositionY = 0,
  animationTime = 2000,
  animationDelay = 20,
  animationType = "bounce",
  data,
  ...
)
```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
maxRadius, minRadius	Where the module should begin and end
fillColorType	The type of filling color, could be either specific or r2(means based on r2)
fillColor	If specific, the color for SNP filling
fillr2Color	If r2, the color for SNP filling
ValueAxisManualScale	Whether manually control the scale of value
ValueAxisMaxScale, ValueAxisMinScale	The max and min scale value for manually control
pointType	The type of SNP point, could be circle or rect
circleSize	If circle, the size for SNP circle
rectWidth	If rect, the width for SNP rect
rectHeight	If rect, the height for SNP rect
animationDisplay	Whether display animation
animationInitialPositionX, animationInitialPositionY	The initial position coordinates for animation
animationTime, animationDelay, animationType	The time, delay and display type for animation

data	A list of SNP value with details including chr, pos, value, des, color, r2value, link, index, image and html. Details can be found on document
...	Ignored

Value

The module tracks for.snp modules

Examples

```
snpData<-snpExample
Circos(CircosSnp('SNP01', minRadius =150, maxRadius = 190, data = snpExample,fillColor= "#9ACD32",
  circleSize= 2, SNPAnimationDisplay=TRUE,SNPAnimationTime= 2000,SNPAnimationDelay= 0,
  SNPAnimationType= "linear") + CircosBackground('BG01',minRadius = 145, maxRadius = 200))
```

CircosText

*Text module***Description**

Text for better explaination of other modules

Usage

```
CircosText(
  modulename,
  text,
  x = 0,
  y = 0,
  size = "1.2em",
  weight = "bold",
  opacity = 1,
  color = "#000000",
  rotateRate = 0,
  animationDisplay = FALSE,
  animationInitialSize = 20,
  animationInitialWeight = "bold",
  animationInitialColor = "black",
  animationInitialOpacity = 1,
  animationInitialPositionX = 0,
  animationInitialPositionY = 0,
  animationInitialRotate = 0,
  animationDelay = 50,
  animationTime = 1000,
  animationType = "linear",
  ...
)
```

Arguments

modulename	The name of the new module
text	The details of text
x, y	The coordinates of the text
size	Font size
weight	Font weight. Should be either "normal", "bold", "bolder" or "lighter"
opacity	Font opacity
color	Font color
rotateRate	rotate rate for text
animationDisplay	Whether display animation or not
animationInitialSize	Initial text size in animation
animationInitialWeight	Initial text weight in animation
animationInitialColor	Initial text color in animation
animationInitialOpacity	Initial text opacity in animation
animationInitialPositionX, animationInitialPositionY	Initial text coordinates in animation(The parameter x,y will become the final position for text if animation displayed)
animationInitialRotate	Initial rotate rate in animation
animationTime, animationDelay, animationType	The time, delay and display type for animation
...	Ignored

Value

The module tracks for text modules.

Examples

```
Circos(CircosText('text01', 'Annotation', color = '#DD2222', x = -40))
```

Description

Create a multi-layer line plot

Usage

```
CircosWig(
    modulename,
    compareGroup = 1,
    maxRadius = 108,
    minRadius = 95,
    direction = "out",
    ValueAxisManualScale = FALSE,
    ValueAxisMaxScale = 10,
    ValueAxisMinScale = 0,
    color = "red",
    opacity = 1,
    strokeColor = "black",
    strokeWidth = 1,
    strokeType = "cardinal",
    animationDisplay = FALSE,
    animationTime = 2000,
    animationDelay = 20,
    animationType = "bounce",
    data,
    ...
)
```

Arguments

modulename	The name of the new module
compareGroup	The group number of this module in compare module
maxRadius, minRadius	Where the module should begin and end
direction	The direction of plot, either inside or outside
ValueAxisManualScale	Whether manually control the scale of value
ValueAxisMaxScale, ValueAxisMinScale	The max and min scale value for manually control
color	Color for plot
opacity	Opacity for plot
strokeColor	The color for stroke
strokeWidth	The width for stroke
strokeType	Line type for stroke, could be linear, cardinal, basis and monotone
animationDisplay	Whether display animation
animationTime, animationDelay, animationType	The time, delay and display type for animation
data	A list of value with details including chr, pos, des, value and html. Details can be found on document
...	Ignored

Value

The module tracks for wig modules

Examples

```
wigData<-wigExample  
Circos(CircosWig('WIG01', data = wigData, maxRadius= 200,minRadius= 150,strokeColor= "darkblue",  
color= "lightblue",strokeType= "cardinal")+CircosBackground('BG01',minRadius = 205,maxRadius = 150)  
,genome=list("chr8"=1000),outerRadius = 220)
```

cnvExample

Cnv module example data

Description

The data is in matrix with column names

Usage

```
cnvExample
```

Format

A data frame with 7 columns:

chr chromosome
start start position
end end position
value value
link hyperlink for cnv
color color
html The external html language

geneExample

Gene plot example data

Description

The data is in matrix with column names

Usage

```
geneExample
```

Format

A data frame with 8 columns:

chr chromosome
strand strand, - or +
start start position
end end position
type region type, gene or utr or cds
name name for description
link hyperlink for this region
html The external html language

heatmapExample *Heatmap plot example data*

Description

The data is in matrix with column names

Usage

`heatmapExample`

Format

A data frame with 7 columns:

chr chromosome
start start position
end end position
name name for description
value value
layer layer number
html The external html language

`hg19_ideogram` *Ideogram for hg19*

Description

The ideogram for human hg19 reference including the color for each region

Usage

`hg19_ideogram`

Format

A data frame with 4 columns:

chr chromosome
start start position
end end position
color color

`histogramExample` *Histogram plot example data*

Description

The data is in matrix with column names

Usage

`histogramExample`

Format

A data frame with 7 columns:

chr chromosome
start start position
end end position
name name for description
link hyperlink
value value
html The external html language

lineExample	<i>Line plot example data</i>
-------------	-------------------------------

Description

The data is in matrix with column names

Usage

```
lineExample
```

Format

A data frame with 5 columns:

chr chromosome
pos position
des description
value value
html The external html language

linkExample	<i>Link plot example data</i>
-------------	-------------------------------

Description

The data is in matrix with column names

Usage

```
linkExample
```

Format

A data frame with 11 columns:

g1chr first chromosome
g1start first start position
g1end first end position
g2chr second chromosome
g2start second start position
g2end second end position
g1name first name
g2name second name
fusion fusion name
link hyperlink for link line
html The external html language

lollipopExample *Lollipop plot example data*

Description

The data is in matrix with column names

Usage

```
lollipopExample
```

Format

A data frame with 12 columns:

protein protein name
chr chromosome
pos position
strand strand, - or +
CancerTypeNumber Cancer type number
color color
link hyperlink
Consequence consequence
AA_pos AA_pos
AA_change AA_change
type type for mutation,Hetero or Homo
html The external html language

scatterExample *Scatter plot example data*

Description

The data is in matrix with column names

Usage

```
scatterExample
```

Format

A data frame with 7 columns:

chr chromosome
start start position
end end position
name name for scatter
des description
link hyperlink
html The external html language

snpExample

Snp plot example data

Description

The data is in matrix with column names

Usage

snpExample

Format

A data frame with 10 columns:

chr chromosome
pos position
value value,such as p-value
des description
color color
r2value r2 value
link hyperlink for snp
index index for combination
image image for combination
html The external html language

wigExample	<i>Wig plot example data</i>
------------	------------------------------

Description

The data is in matrix with column names

Usage

wigExample

Format

A data frame with 5 columns:

chr chromosome
pos position
des description
value value
html The external html language
