

Package ‘ggcyto’

October 12, 2016

Type Package

Title Visualize Cytometry data with ggplot

Version 1.0.6

Date 2015-11-02

Author Mike Jiang

Maintainer Mike Jiang <wjiang2@fhcrc.org>

Description With the dedicated `fortify` method implemented for `flowSet`, `ncdfFlowSet` and `GatingSet` classes, both raw and gated flow cytometry data can be plotted directly with `ggplot`. `ggcyto` wrapper and some customized layers also make it easy to add gates and population statistics to the plot.

VignetteBuilder knitr

Depends methods, `ggplot2(>= 2.0.0)`, `flowCore`, `ncdfFlow(>= 2.17.1)`, `flowWorkspace(>= 3.17.24)`

Imports `plyr`, `scales`, `data.table`, `RColorBrewer`, `gridExtra`

Suggests `testthat`, `flowWorkspaceData`, `knitr`, `rmarkdown`, `flowStats`, `openCyto`, `flowViz`

License Artistic-2.0

`+.ggcyto_flowSet` *overloaded '+' method for ggcyto*

Description

It tries to copy pData from ggcyto object to the gate layers so that the gate layer does not need to have 'pd' to be supplied explicitly by users. It also calculates population statistics when geom_stats layer is added. It supports addition ggcyto layers such as 'ggcyto_par' and 'labs_cyto'.

Usage

```
## S3 method for class 'ggcyto_flowSet'  
e1 + e2  
  
## S4 method for signature 'ggcyto_flowSet,ANY'  
e1 + e2
```

Arguments

| | |
|----|--|
| e1 | An object of class <code>ggcyto_flowSet</code> |
| e2 | A component to add to e1 |

Value

`ggcyto_flowSet` object

Examples

```
data(GvHD)  
fs <- GvHD[subset(pData(GvHD), Patient %in% 5:7 & Visit %in% c(5:6))[, "name"]]  
p <- ggcyto(fs, aes(x = `FSC-H`, y = `SSC-H`)) + geom_hex(bins = 128)  
#add rectangleGate layer (2d)  
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))  
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)  
p + geom_gate(rect.gates) + geom_stats()
```

`+.ggcyto_GatingLayout` overloaded '+' method for `ggcyto_gate_layout`

Description

It adds the layer specified by 'e2' to each individual `ggplot` object stored in `ggcyto_gate_layout`

Usage

```
## S3 method for class 'ggcyto_GatingLayout'  
e1 + e2  
  
## S4 method for signature 'ggcyto_GatingLayout,ANY'  
e1 + e2
```

Arguments

| | |
|----|---------------------------------|
| e1 | <code>ggcyto_gate_layout</code> |
| e2 | any <code>ggplot</code> layer |

Value

a modified ggcyto_gate_layout object
 a GatingLayout object

Examples

```
#autplot for GatingSet
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
gh <- gs[[1]]
p <- autoplot(gh)
class(p)
# customize the font size of strip text for each ggcyo plots contained in GatingLayout object
p + theme(strip.text = element_text(size = 14))
```

`+.ggcyto_GatingSet` *overloaded '+' method for ggcyto.gs*

Description

It takes care the speical format of some ggcyto layers. For example geom_gate or geom_stats layer with just gate(population) name specified, It only supports some special axis transformations. (See examples below)

Usage

```
## S3 method for class 'ggcyto_GatingSet'
e1 + e2

## S4 method for signature 'ggcyto_GatingSet,ANY'
e1 + e2
```

Arguments

| | |
|----|---------------------------|
| e1 | An object of class ggcyto |
| e2 | A component to add to e1 |

Value

ggcyto_GatingSet object

Examples

```
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p <- p + geom_gate("CD4") + geom_stats() #plot CD4 gate and it is stats
p
p + axis_x_inverse_trans() #inverse transform the x axis into raw scale
```

as.ggplot*It fortifies the data, fills some default settings and returns a regular ggplot object.*

Description

The orginal data format is preserved during the ggcyo constructor because they still need to be used during the plot building process. This function is usually called automatically in the print/plot method of ggcyto. Sometime it is useful to coerce it to ggplot explicitly by user so that it can be used as a regular ggplot object.

Usage

```
as.ggplot(x)
```

Arguments

| | |
|---|--|
| x | ggcyto object with the data that has not yet been fortified to data.frame. |
|---|--|

Value

ggplot object

Examples

```
data(GvHD)
fs <- GvHD[1:3]
#construct the `ggcyto` object (inherits from `ggplot` class)
p <- ggcyto(fs, aes(x = `FSC-H`)) + geom_histogram()
class(p) # a ggcyto object
p$data # data has not been fortified
p1 <- as.ggplot(p) # convert it to a ggplot object explicitly
class(p1)
p1$data # data is fortified
```

autoplots.flowSet*Plot fluorescence intensity in one or two dimension.*

Description

Overloaded autoplot for the cytometry data structure: flowFrame or flowSet, Gatinghierarchy, GatingSet. It plots the cytometry data with geom_histogram, geom_density or geom_hex.

Usage

```
## S3 method for class 'flowSet'
 autoplot(object, x, y = NULL, bins = 30, ...)

## S3 method for class 'flowFrame'
 autoplot(object, ...)

## S3 method for class 'GatingSet'
 autoplot(object, gate, x = NULL, y = "SSC-A",
          bins = 30, ...)

## S3 method for class 'GatingHierarchy'
 autoplot(object, gate, y = "SSC-A", bool = FALSE,
          arrange.main = sampleNames(object), arrange = TRUE, merge = TRUE,
          projections = list(), strip.text = c("parent", "gate"), ...)
```

Arguments

| | |
|---------------------------|---|
| <code>object</code> | flowFrame, flowSet, GatingSet object |
| <code>x, y</code> | define the dimension of the plot |
| <code>bins</code> | passed to <code>geom_hex</code> |
| <code>...</code> | other arguments passed to <code>ggplot</code> |
| <code>gate</code> | the gate to be plotted |
| <code>bool</code> | whether to plot boolean gates |
| <code>arrange.main</code> | the main title of the arranged plots |
| <code>arrange</code> | whether to use <code>arrangeGrob</code> to put multiple plots in the same page |
| <code>merge</code> | whether to merge multiple gates into the same panel when they share the same parent and projections |
| <code>projections</code> | a list of customized projections |
| <code>strip.text</code> | either "parent" (the parent population name) or "gate" (the gate name). The latter usually is used when <code>merge</code> is FALSE |

Value

a ggcyto object

Examples

```
library(flowCore)
data(GvHD)
fs <- GvHD[subset(pData(GvHD), Patient %in% 5:7 & Visit %in% c(5:6))[, "name"]]

#1d- density plot
autoplot(fs, x = "SSC-H")

#2d plot: default geom_hex plot
```

```

  autoplot(fs, x = 'FSC-H', y ='SSC-H')

  #autplot for GatingSet
  dataDir <- system.file("extdata",package="flowWorkspaceData")
  gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
  autoplot(gs, "CD3+")

  #autplot for GatingHierarchy
  gh <- gs[[1]]
  autoplot(gh) # by default the strip.text shows the parent population

  #To display the gate name
  #autoplot(gh , strip.text = "gate")

```

axis_x_inverse_trans *Display axis labels in raw scales*

Description

It is essentially a dummy continuous scale and will be instantiated by '+.ggcyto_GatingSet' with 'breaks' and 'lables' customized.

Usage

```

axis_x_inverse_trans(...)

axis_y_inverse_trans(...)

```

Arguments

| | |
|-----|--|
| ... | common continuous scale parameters passed to 'continuous_scale' (not used currently) |
|-----|--|

Value

a raw_scale object that inherits scale class.

Examples

```

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p <- p + geom_gate("CD4") + geom_stats() #plot CD4 gate and it is stats
p
p + axis_x_inverse_trans() #inverse transform the x axis into raw scale

```

| | |
|----------------------------|---|
| <code>compute_stats</code> | <i>compute the statistics of the cell population defined by gates</i> |
|----------------------------|---|

Description

It calls the underlining stats routine and merge it with the label position calculated by stat_position as well as the pData of flowSet.

Usage

```
compute_stats(fs = NULL, gates, type = "percent", value = NULL,
             data_range = NULL, ...)
```

Arguments

| | |
|-------------------------|--|
| <code>fs</code> | flowSet. can be NULL when precalculated 'value' is provided |
| <code>gates</code> | a list of filters |
| <code>type</code> | can be "percent", "count" or "MFI". |
| <code>value</code> | the pre-calculated stats value. when supplied, the stats computing is skipped. |
| <code>data_range</code> | the data range for each channels |
| <code>...</code> | other arguments passed to stat_position function |

Details

This function is usually not called directly by user but used by ggcryo when geom_stat layer is added.

Value

a data.table that contains percent and centroid locations as well as pData that used as data for geom_btext layer.

Examples

```
data(GvHD)
fs <- GvHD[1:4]
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)
compute_stats(fs, rect.gates)
```

`fortify.ellipsoidGate` *Convert a ellipsoidGate to a data.table useful for ggplot*

Description

It interpolates the ellipsoidGate to polygongate before fortifying it.

Usage

```
## S3 method for class 'ellipsoidGate'  
fortify(model, data = NULL, ...)
```

Arguments

| | |
|-------|--|
| model | ellipsoidGate |
| data | data range used for polygon interpolation. |
| ... | not used. |

Value

`data.table`

Examples

```
## Defining the gate  
cov <- matrix(c(6879, 3612, 3612, 5215), ncol=2,  
               dimnames=list(c("FSC-H", "SSC-H"), c("FSC-H", "SSC-H")))  
mean <- c("FSC-H"=430, "SSC-H"=175)  
eg <- ellipsoidGate(filterId= "myEllipsoidGate", .gate=cov, mean=mean)  
fortify(eg)
```

`fortify.filterList` *Convert a filterList to a data.table useful for ggplot*

Description

It tries to merge with pData that is associated with filterList as attribute 'pd'

Usage

```
## S3 method for class 'filterList'  
fortify(model, data = NULL, nPoints = NULL, ...)
```

Arguments

| | |
|----------------------|---|
| <code>model</code> | <code>filterList</code> |
| <code>data</code> | data range used for polygon interpolation |
| <code>nPoints</code> | used for interpolating polygonGates to prevent it from losing shape when truncated by axis limits |
| <code>...</code> | not used. |

Value

`data.table`

Examples

```
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
gates <- getGate(gs, "CD4")
gates <- as(gates, "filterList") #must convert list to filterList in order for the method to dispatch properly
fortify(gates)
```

fortify.flowFrame

Convert a flowFrame/flowSet/GatingSet to a ggplot-compatible data.table

Description

It extracts events matrices and appends the pData to it so that ggplot can use the pData for facetting.

Usage

```
## S3 method for class 'flowFrame'
fortify(model, data, ...)

## S3 method for class 'flowSet'
fortify(model, data, ...)

## S3 method for class 'GatingSet'
fortify(model, ...)
```

Arguments

| | |
|--------------------|---------------------------------|
| <code>model</code> | flowFrame, flowSet or GatingSet |
| <code>data</code> | not used. |
| <code>...</code> | not used. |

Value

```
data.table
data.table
data.table
```

Examples

```
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))

attr(gs, "subset") <- "CD4" #must attach subset information to GatingSet object before fortifying it
fortify(gs)

fs <- getData(gs, "CD8")
fortify(fs)#fs is a flowSet/ncdffFlowSet

fr <- fs[[1]]
fortify(fr)#fr is a flowFrame
```

fortify.polygonGate *Convert a polygonGate to a data.table useful for ggplot*

Description

It converts the boundaries slot into a data.table When 'nPoints' is supplied, the method tries to interpolate the polygon with more vertices.

Usage

```
## S3 method for class 'polygonGate'
fortify(model, data = NULL, nPoints = NULL, ...)
```

Arguments

| | |
|---------|--|
| model | polygonGate |
| data | data range used to reset off-bound gate coordinates to prevent interpolating on the extremely large space unnecessarily. |
| nPoints | total number of vertices of the polygon after interpolation. Default is NULL, which is no interpolation. The actual number may be more or less based on the lengths of edges due to the maximum and minimum limits on each edge. Interpolation is mainly for the purpose of plotting (so that it won't lose its shape from subsetting through 'limits'). But it is not necessary for other purposes like centroid calculation. |
| ... | not used. |

Value

```
data.table
```

Examples

```
srcut <- matrix(c(300,300,600,600,50,300,300,50),ncol=2,nrow=4)
colnames(srcut) <- c("FSC-H","SSC-H")
pg <- polygonGate(filterId="nonDebris", .gate= srcut)
fortify(pg) #no interpolation
fortify(pg, nPoints = 30) # with interpolation
```

fortify.rectangleGate *Convert a rectangleGate to a data.table useful for ggplot*

Description

For 2d rectangelGate, it is converted to a polygonGate first and then dispatch to the fortify method for polygonGate. for 1d, uses geom_vline/hline format.

Usage

```
## S3 method for class 'rectangleGate'
fortify(model, data = NULL, ...)
```

Arguments

| | |
|-------|--|
| model | rectangleGate |
| data | data range used for polygon interpolation. |
| ... | not used. |

Value

```
data.table
```

Examples

```
#2d rectangleGate
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))
fortify(rect.g)
#1d gate
rg <- rectangleGate(list("FSC-H" = c(300,500)))
fortify(rg)
```

| | |
|-------------------------|--|
| <code>fortify_fs</code> | <i>Fortify a model into flowSet object</i> |
|-------------------------|--|

Description

The method provides a universe interface to convert a generic R object into a flowSet useful for ggcyto

Usage

```
fortify_fs(model, data, ...)

## S3 method for class 'flowSet'
fortify_fs(model, data, ...)

## Default S3 method:
fortify_fs(model, data, ...)

## S3 method for class 'flowFrame'
fortify_fs(model, data, ...)

## S3 method for class 'GatingSet'
fortify_fs(model, data, ...)
```

Arguments

| | |
|-------|--|
| model | flow object(flowFrame or GatingSet) to be converted to flowSet. when it is a GatingSet, it must contain the subset information stored as 'subset' attribute. |
| data | original dataset, if needed |
| ... | other arguments passed to methods |

Value

a flowSet/ncdfFlowSet object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
fortify_fs(fr)

dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
attr(gs, "subset") <- "CD4"
fortify_fs(gs)
```

| | |
|------------------------|----------------------------------|
| <code>geom_gate</code> | <i>add a flowCore gate layer</i> |
|------------------------|----------------------------------|

Description

When 'data' is a gate (or flowCore filter) or a list of gates or a filterList object. When it is used directly with 'ggplot', pdata of the flow data must be supplied through 'pd' argument explicitly in order for the gates to be dispatched to each panel. However It is not necessary when used with 'gcyto' wrapper since the latter will attach pData automatically.

Usage

```
geom_gate(data, ...)

## Default S3 method:
geom_gate(data, ...)

## S3 method for class 'list'
geom_gate(data, ...)

## S3 method for class 'filterList'
geom_gate(data, ...)

## S3 method for class 'polygonGate'
geom_gate(data, ...)

## S3 method for class 'rectangleGate'
geom_gate(data, ...)

## S3 method for class 'ellipsoidGate'
geom_gate(data, ...)

## S3 method for class 'character'
geom_gate(data, ...)

## S3 method for class 'logicalFilterResult'
geom_gate(data, ...)

## S3 method for class 'logical'
geom_gate(data, ...)
```

Arguments

| | |
|-------------------|---|
| <code>data</code> | a filter (Currently only rectangleGate (1d or 2d), polygonGate, ellipsoidGate are supported.) or a list of these gates or filterList or character specifying a gated cell population in the GatingSet |
|-------------------|---|

... other arguments mapping, The mapping aesthetic mapping data a polygonGate fill polygonGate is not filled by default colour default is red pd pData (data.frame) that has rownames represents the sample names used as key to be merged with filterList

Details

When 'data' is a character, it construct an abstract geom layer for a character that represents nodes in a Gating tree and will be instantiated later as a specific geom_gate layer or layers based on the gates extracted from the given GatingSet object.

Value

a geom_gate layer

Examples

```
data(GvHD)
fs <- GvHD[subset(pData(GvHD), Patient %in% 5:7 & Visit %in% c(5:6))[, "name"]]
p <- ggcryo(fs, aes(x = `FSC-H`, y = `SSC-H`))
p <- p + geom_hex(bins = 128)
rect.g <- rectangleGate(list("FSC-H" = c(300, 500), "SSC-H" = c(50, 200)))
# constructor for a list of filters
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)
p + geom_gate(rect.gates)

dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
p <- ggcryo(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
# add gate layer by gate name
p + geom_gate("CD4")
```

geom_hvline

Vertical or horizontal line.

Description

This geom is based on the source code of '[geom_hline](#) and [geom_vline](#).

Usage

```
geom_hvline(mapping = NULL, data = NULL, position = "identity",
show.legend = FALSE, ...)
```

Arguments

| | |
|-------------|--|
| mapping | The aesthetic mapping, usually constructed with <code>aes</code> or <code>aes_string</code> . Only needs to be set at the layer level if you are overriding the plot defaults. |
| data | A layer specific dataset - only needed if you want to override the plot defaults. |
| position | The position adjustment to use for overlapping points on this layer |
| show.legend | should a legend be drawn? (defaults to FALSE) |
| ... | other arguments passed on to <code>layer</code> . This can include aesthetics whose values you want to set, not map. See <code>layer</code> for more details. |

Details

The goal is to determine the line to be either vertical or horizontal based on the 1-d data provided in this layer.

Value

a geom_hvline layer

Aesthetics

`geom_vline` understands the following aesthetics (required aesthetics are in bold):

- **xintercept**
- alpha
- colour
- linetype
- size

Examples

```
p <- ggplot(mtcars, aes(x = wt, y = mpg)) + geom_point()
# vline
p + geom_hvline(data = data.frame(wt= 3))
# hline
p + geom_hvline(data = data.frame(mpg= 20))
```

Description

It is a virtual layer and will be instantiated as `geom_label` layer within `ggyclo.+` operator.

Usage

```
geom_stats(gate = NULL, ..., value = NULL, type = "percent",
  data_range = NULL, adjust = 0.5, label.padding = unit(0.05, "lines"),
  label.size = 0)
```

Arguments

| | |
|---------------------------|--|
| gate | a 'filterList' or character (represent as a population node in GatingSet) if not supplied, ggcryo then tries to parse the gate from the first geom_gate layer. |
| ... | other arguments passed to geom_label layer |
| value | the pre-calculated stats value. when supplied, the stats computing is skipped. |
| type | can be "percent", "count" or "MFI". |
| data_range | the data range for each channels |
| adjust | adjust the position of the centroid. from 0 to 1. |
| label.padding, label.size | arguments passed to geom_label layer |

Details

So it is dedicated for ggcryo context and thus can't not be added to ggplot object directly.

Value

a geom_popStats layer

Examples

```
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
p <- ggcryo(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p
# add gate and stats layer
p + geom_gate("CD4") + geom_stats()
```

getFlowFrame

extract flowFrame data structure from the given R object

Description

Mainly to get the channel and marker information.

Usage

```
getFlowFrame(x)

## S3 method for class 'flowSet'
getFlowFrame(x)

## S3 method for class 'GatingSet'
getFlowFrame(x)

## S3 method for class 'GatingHierarchy'
getFlowFrame(x)
```

Arguments

x flowSet or GatingSet/GatingHierarchy

Value

a flowFrame. When x is a ncdfFlowSet or GatingSet that is associated with ncdfFlowSet, the raw event data is not read and an empty flowFrame is returned.

Examples

```
data(GvHD)
fs <- GvHD[1:2]
getFlowFrame(fs)# fs is a flowSet

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
getFlowFrame(gs)# gs is a GatingSet
```

ggcyto.flowSet *Create a new ggcyto plot from a flowSet*

Description

Create a new ggcyto plot from a flowSet

Usage

```
## S3 method for class 'flowSet'
ggcyto(data, mapping, filter = NULL, ...)
```

Arguments

| | |
|---------|--|
| data | default flowSet for plot |
| mapping | default list of aesthetic mappings (these can be colour, size, shape, line type – see individual geom functions for more details) |
| filter | a flowcore gate object or a function that takes flowSet and channels as input and returns a data-dependent flowcore gate. The gate is used to filter the flow data before it is plotted. |
| ... | ignored |

Value

a ggcyto_GatingSet object which is a subclass of ggcyto class.

Examples

```
data(GvHD)
fs <- GvHD[subset(pData(GvHD), Patient %in% 5:7 & Visit %in% c(5:6))[, "name"]]
# 1d histogram/densityplot
p <- ggcyto(fs, aes(x = `FSC-H`))
#facet_wrap(~name)` is used automatically
p1 <- p + geom_histogram()
p1
#overwriting the default facetting
p1 + facet_grid(Patient~Visit)

#display density
p + geom_density()

# 2d scatter/dot plot
p <- ggcyto(fs, aes(x = `FSC-H`, y = `SSC-H`))
p <- p + geom_hex(bins = 128)
p
```

ggcyto.GatingSet *Create a new ggcyto plot from a GatingSet*

Description

Create a new ggcyto plot from a GatingSet

Usage

```
## S3 method for class 'GatingSet'
ggcyto(data, mapping, subset = "_parent_", ...)

## S3 method for class 'GatingHierarchy'
ggcyto(data, ...)
```

Arguments

| | |
|----------------------|---|
| <code>data</code> | GatingSet to plot |
| <code>mapping</code> | default list of aesthetic mappings (these can be colour, size, shape, line type – see individual geom functions for more details) |
| <code>subset</code> | character that specifies the node path or node name in the GatingSet. Default is " <code>_parent_</code> ", which will be substitute with the actual node name based on the <code>geom_gate</code> layer to be added later. |
| <code>...</code> | ignored |

Value

a `ggcyto_GatingSet` object which is a subclass of `ggcyto_flowSet` class.

Examples

```
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
# 2d plot
ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)

# 1d plot
ggcyto(gs, aes(x = CD4), subset = "CD3+") + geom_density()
```

`ggcyto_par_default` *Return The default ggcyto settings*

Description

Return The default ggcyto settings

Usage

```
ggcyto_par_default()
```

Value

a list of default settings for ggcyto

Examples

```
ggcyto_par_default()
```

| | |
|-----------------------------|---|
| <code>ggcyto_par_set</code> | <i>Set some default parameters for ggcyto</i> |
|-----------------------------|---|

Description

Use this function to modify ggcyto parameters These are the regular (or to be instantiated as) scales, labs, facet objects. They can be added as a single layer to the plot for the convenience.

Usage

```
ggcyto_par_set(...)
```

Arguments

- | | |
|-----|--|
| ... | a list of element name, element pairings that modify the existing parameter settings |
|-----|--|

Value

a list of new settings for ggcyto

elements

The individual elements are:

- | | |
|----------|--|
| limits | can be "data"(default) or "instrument" or a list of numeric limits for x and y (e.g. <code>list(x = c(0, 4000))</code>) |
| facet | the regular facet object |
| hex_fill | default scale_fill_gradientn for geom_hex layer |
| lab | labs_cyto object |

Examples

```
library(ggcyto)
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))

p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+")
# 2d plot
p <- p + geom_hex(bins = 64)
p

#use instrument range by overwritting the default limits settings
p + ggcyto_par_set(limits = "instrument")

#manually set limits
myPars <- ggcyto_par_set(limits = list(x = c(0,3.2e3), y = c(-10, 3.5e3)))
p + myPars# or xlim(0,3.2e3) + ylim(-10, 3.5e3)
```

is.ggcryo*Reports whether x is a ggcryo object***Description**

Reports whether x is a ggcryo object

Usage

```
is.ggcryo(x)
```

Arguments

| | |
|---|-------------------|
| x | An object to test |
|---|-------------------|

Value

TRUE/FALSE

Examples

```
data(GvHD)
fs <- GvHD[1:2]
p <- ggcryo(fs, aes(x = `FSC-H`))
is.ggcryo(p)
```

is.ggcryo_flowSet*Reports whether x is a ggcryo_flowSet object***Description**

Reports whether x is a ggcryo_flowSet object

Usage

```
is.ggcryo_flowSet(x)
```

Arguments

| | |
|---|-------------------|
| x | An object to test |
|---|-------------------|

Value

TRUE or FALSE

Examples

```
data(GvHD)
fs <- GvHD[1:2]
p <- ggcryo(fs, aes(x = `FSC-H`))
is.ggcryo_flowSet(p)
```

| | |
|---------------|---|
| is.ggcryo_par | <i>Reports whether x is a ggcryo_par object</i> |
|---------------|---|

Description

Reports whether x is a ggcryo_par object

Usage

```
is.ggcryo_par(x)
```

Arguments

| | |
|---|--------------------------|
| x | <i>An object to test</i> |
|---|--------------------------|

Value

TRUE or FALSE

Examples

```
myPar <- ggcryo_par_set(limits = "instrument")
is.ggcryo_par(myPar)
```

| | |
|-----------|---|
| labs_cryo | <i>Change axis labels and legend titles</i> |
|-----------|---|

Description

The actual labels text will be instantiated when it is added to ggcryo plot.

Usage

```
labs_cryo(labels = "both")
```

Arguments

| | |
|--------|--|
| labels | <i>default labels for x, y axis. Can be "channel", "marker", or "both" (default)</i> |
|--------|--|

Value

a list

Examples

```
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))

# default is "both"
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p

#use marker name as x,y labs
p + labs_cyto("marker")

#use channel name as x,y labs
p + labs_cyto("channel")
```

marginalFilter

Generate a marginal gate.

Description

It simply constructs an boundaryFilter that removes the marginal events. It can be passed directly to ggcyto constructor. See the examples for details.

Usage

```
marginalFilter(fs, dims, ...)
```

Arguments

| | |
|-------------|--|
| fs | flowSet (not used.) |
| dims | the channels involved |
| ... | arguments passed to boundaryFilter |

Value

an boundaryFilter

Examples

```
data(GvHD)
fs <- GvHD[1]
chnls <- c("FSC-H", "SSC-H")
#before removing marginal events
summary(fs[, chnls])
```

```

# create marginal filter
g <- marginalFilter(fs, chnls)
g

#after remove marginal events
fs.clean <- Subset(fs, g)
summary(fs.clean[, chnls])

#pass the function directly to ggcyto
dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
# with marginal events
ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)

# using marginalFilter to remove these events
ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+", filter = marginalFilter) + geom_hex(bins = 64)

```

print.ggcyto*Draw ggcyto on current graphics device.*

Description

A wrapper for print.ggplot. It converts the ggcyto to conventional ggplot object before printing it. This is usually invoked automatically when a ggcyto object is returned to R console.

Usage

```

## S3 method for class 'ggcyto'
print(x, ...)

## S3 method for class 'ggcyto'
plot(x, ...)

## S4 method for signature 'ggcyto'
print(x, ...)

## S3 method for class 'ggcyto'
show(object)

## S4 method for signature 'ggcyto'
show(object)

```

Arguments

| | |
|---------------------|---|
| <code>x</code> | ggcyto object to display |
| <code>...</code> | other arguments not used by this method |
| <code>object</code> | ggcyto object |

Value

nothing

print.ggcryo_GatingLayout

print method for ggcryo_gate_layout class It calls arrangeGrob to arrange a list of ggplot objects stored as ggcryo_gate_layout object

Description

print method for ggcryo_gate_layout class It calls arrangeGrob to arrange a list of ggplot objects stored as ggcryo_gate_layout object

Usage

```
## S3 method for class 'ggcryo_GatingLayout'
print(x, ...)

## S3 method for class 'ggcryo_GatingLayout'
show(object)

## S4 method for signature 'ggcryo_GatingLayout'
show(object)
```

Arguments

| | |
|--------|---|
| x | ggcryo_gate_layout, which is essentially a list of ggplot objects |
| ... | other arguments passed to arrangeGrob |
| object | ggcryo_GatingLayout |

Value

nothing

scale_x_flowJo.biexp *flowJo biexponential scale*

Description

flowJo biexponential scale

Usage

```
scale_x_flowJo_biel(..., maxValue = 262144, widthBasis = -10, pos = 4.5,
neg = 0, equal.space = FALSE)

scale_y_flowJo_biel(..., maxValue = 262144, widthBasis = -10, pos = 4.5,
neg = 0, equal.space = FALSE)
```

Arguments

... common continuous scale parameters passed to 'continuous_scale' (not used currently)
maxValue, widthBasis, pos, neg
see 'help(flowJoTrans')
equal.space whether to display the breaks in equal.space format

Value

ScaleContinuous object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
p <- ggcyto(fr, aes(x = `FL1-H`)) + geom_density()
#display at raw scale
p
#display at transformed scale
p + scale_x_flowJo_biel(maxValue = 1e4, widthBasis = 0)
```

scale_x_flowJo_fasinh *flowJo inverse hyperbolic sine scale*

Description

flowJo inverse hyperbolic sine scale

Usage

```
scale_x_flowJo_fasinh(..., m = 4, t = 1200)

scale_y_flowJo_fasinh(..., m = 4, t = 1200)
```

Arguments

... common continuous scale parameters passed to 'continuous_scale' (not used currently)
m, t see 'help(flowJo.fasinh')

Value

ScaleContinuous object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
p <- ggcyto(fr, aes(x = `FL1-H`)) + geom_density()
#display at raw scale
p
#display at transformed scale
p + scale_x_flowJo_fasinh(t = 1e4)
```

scale_x_logicle

flowJo inverse hyperbolic sine scale

Description

flowJo inverse hyperbolic sine scale

Usage

```
scale_x_logicle(..., w = 0.5, t = 262144, m = 4.5, a = 0)
scale_y_logicle(..., w = 0.5, t = 262144, m = 4.5, a = 0)
```

Arguments

| | |
|------------|--|
| ... | common continuous scale parameters passed to 'continuous_scale' (not used currently) |
| w, t, m, a | see 'help(logicleTransform)' |

Value

ScaleContinuous object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
p <- ggcyto(fr, aes(x = `FL1-H`)) + geom_density()
#display at raw scale
p
#display at transformed scale
p + scale_x_logicle(t = 1e4)
```

| | |
|---------------|--|
| stat_position | <i>compute the positions of the population statistics based on the geometric gate centroid</i> |
|---------------|--|

Description

It is usually not called directly by user but mainly used by compute_stats function (which is called by ggcryo add method when geom_states layer is added).

Usage

```
stat_position(gate, ...)

## S3 method for class 'filter'
stat_position(gate, ...)

## S3 method for class 'filterList'
stat_position(gate, ...)

## S3 method for class 'list'
stat_position(gate, ...)
```

Arguments

| | |
|------------|--|
| gate | a flowCore filter |
| ... | other arguments adjust adjust the position of the centroid |
| abs | logical |
| data_range | the actual data range |

Value

a data.table
the gate centroid coordinates

Examples

```
data(GvHD)
fs <- GvHD[1:4]
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)
stat_position(rect.gates)
```
