

# Package ‘pcaExplorer’

April 16, 2019

**Type** Package

**Title** Interactive Visualization of RNA-seq Data Using a Principal Components Approach

**Version** 2.8.1

**Date** 2018-10-22

**Maintainer** Federico Marini <[marinif@uni-mainz.de](mailto:marinif@uni-mainz.de)>

**Description** This package provides functionality for interactive visualization of RNA-seq datasets based on Principal Components Analysis. The methods provided allow for quick information extraction and effective data exploration. A Shiny application encapsulates the whole analysis.

**License** MIT + file LICENSE

**LazyData** TRUE

**Imports** DESeq2, SummarizedExperiment, GenomicRanges, IRanges, S4Vectors, genefilter, ggplot2 (>= 2.0.0), d3heatmap, scales, NMF, plyr, topGO, limma, GOstats, GO.db, AnnotationDbi, shiny (>= 0.12.0), shinydashboard, shinyBS, ggrepel, DT, shinyAce, threejs, biomaRt, pheatmap, knitr, rmarkdown, tidyverse, grDevices, methods

**Suggests** testthat, BiocStyle, airway, org.Hs.eg.db

**URL** <https://github.com/federicomarini/pcaExplorer>,  
<https://federicomarini.github.io/pcaExplorer/>

**BugReports** <https://github.com/federicomarini/pcaExplorer/issues>

**biocViews** ImmunoOncology, Visualization, RNASeq, DimensionReduction, PrincipalComponent, QualityControl, GUI, ReportWriting

**VignetteBuilder** knitr

**RoxygenNote** 6.1.0

**Encoding** UTF-8

**NeedsCompilation** no

**Author** Federico Marini [aut, cre]

**git\_url** <https://git.bioconductor.org/packages/pcaExplorer>

**git\_branch** RELEASE\_3\_8

**git\_last\_commit** 7d38a3c

**git\_last\_commit\_date** 2019-01-04

**Date/Publication** 2019-04-15

---

correlatePCs	<i>Principal components (cor)relation with experimental covariates</i>
--------------	--

---

### Description

Computes the significance of (cor)relations between PCA scores and the sample experimental covariates, using Kruskal-Wallis test for categorial variables and the cor.test based on Spearman's correlation for continuous variables

### Usage

```
correlatePCs(pcaobj, coldata, pcs = 1:4)
```

### Arguments

pcaobj	A prcomp object
coldata	A data.frame object containing the experimental covariates
pcs	A numeric vector, containing the corresponding PC number

### Value

A data.frame object with computed p values for each covariate and for each principal component

## Examples

```
library(DESeq2)
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaobj <- prcomp(t(assay(rlt)))
correlatePCs(pcaobj,colData(dds))
```

distro\_expr

*Plot distribution of expression values*

## Description

Plot distribution of expression values

## Usage

```
distro_expr(rld, plot_type = "density")
```

## Arguments

rld	A <a href="#">DESeqTransform</a> object.
plot_type	Character, choose one of boxplot, violin or density. Defaults to density

## Value

A plot with the distribution of the expression values

## Examples

```
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
distro_expr(rlt)
```

geneprofiler

*Extract and plot the expression profile of genes*

## Description

Extract and plot the expression profile of genes

## Usage

```
geneprofiler(se, genelist = NULL, intgroup = "condition",
            plotZ = FALSE)
```

**Arguments**

se	A <a href="#">DESeqDataSet</a> object, or a <a href="#">DESeqTransform</a> object.
genelist	An array of characters, including the names of the genes of interest of which the profile is to be plotted
intgroup	A factor, needs to be in the colnames of colData(se)
plotZ	Logical, whether to plot the scaled expression values. Defaults to FALSE

**Value**

A plot of the expression profile for the genes

**Examples**

```
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
geneprofiler(rlt,paste0("gene",sample(1:1000,20)))
geneprofiler(rlt,paste0("gene",sample(1:1000,20)),plotZ=TRUE)
```

genespca

*Principal components analysis on the genes***Description**

Computes and plots the principal components of the genes, eventually displaying the samples as in a typical biplot visualization.

**Usage**

```
genespca(x, ntop, choices = c(1, 2), arrowColors = "steelblue",
  groupNames = "group", biplot = TRUE, scale = 1, pc.biplot = TRUE,
  obs.scale = 1 - scale, var.scale = scale, groups = NULL,
  ellipse = FALSE, ellipse.prob = 0.68, labels = NULL,
  labels.size = 3, alpha = 1, var.axes = TRUE, circle = FALSE,
  circle.prob = 0.69, varname.size = 4, varname.adjust = 1.5,
  varname.abbrev = FALSE, returnData = FALSE, coordEqual = FALSE,
  scaleArrow = 1, useRownamesAsLabels = TRUE, point_size = 2,
  annotation = NULL)
```

**Arguments**

x	A <a href="#">DESeqTransform</a> object, with data in assay(x), produced for example by either <a href="#">rlog</a> or <a href="#">varianceStabilizingTransformation</a>
ntop	Number of top genes to use for principal components, selected by highest row variance
choices	Vector of two numeric values, to select on which principal components to plot
arrowColors	Vector of character, either as long as the number of the samples, or one single value
groupNames	Factor containing the groupings for the input data. Is efficiently chosen as the (interaction of more) factors in the colData for the object provided

biplot	Logical, whether to additionally draw the samples labels as in a biplot representation
scale	Covariance biplot (scale = 1), form biplot (scale = 0). When scale = 1, the inner product between the variables approximates the covariance and the distance between the points approximates the Mahalanobis distance.
pc.biplot	Logical, for compatibility with biplot.princomp()
obs.scale	Scale factor to apply to observations
var.scale	Scale factor to apply to variables
groups	Optional factor variable indicating the groups that the observations belong to. If provided the points will be colored according to groups
ellipse	Logical, draw a normal data ellipse for each group
ellipse.prob	Size of the ellipse in Normal probability
labels	optional Vector of labels for the observations
labels.size	Size of the text used for the labels
alpha	Alpha transparency value for the points (0 = transparent, 1 = opaque)
var.axes	Logical, draw arrows for the variables?
circle	Logical, draw a correlation circle? (only applies when prcomp was called with scale = TRUE and when var.scale = 1)
circle.prob	Size of the correlation circle in Normal probability
varname.size	Size of the text for variable names
varname.adjust	Adjustment factor the placement of the variable names, >= 1 means farther from the arrow
varname.abbrev	Logical, whether or not to abbreviate the variable names
returnData	Logical, if TRUE returns a data.frame for further use, containing the selected principal components for custom plotting
coordEqual	Logical, default FALSE, for allowing brushing. If TRUE, plot using equal scale cartesian coordinates
scaleArrow	Multiplicative factor, usually >=1, only for visualization purposes, to allow for distinguishing where the variables are plotted
useRownamesAsLabels	Logical, if TRUE uses the row names as labels for plotting
point_size	Size of the points to be plotted for the observations (genes)
annotation	A data.frame object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, gene_name, containing e.g. HGNC-based gene symbols

## Details

The implementation of this function is based on the beautiful ggbio package developed by Vince Vu, available at <https://github.com/vqv/ggbio>. The adaptation and additional parameters are tailored to display typical genomics data such as the transformed counts of RNA-seq experiments

## Value

An object created by ggplot, which can be assigned and further customized.

## Examples

```

library(DESeq2)
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- rlogTransformation(dds)
groups <- colData(dds)$condition
groups <- factor(groups,levels=unique(groups))
cols <- scales::hue_pal()(2)[groups]
genespca(rlt,ntop=100,arrowColors=cols,groupNames=groups)

groups_multi <- interaction(as.data.frame(colData(rlt)[,c("condition","tissue")]))
groups_multi <- factor(groups_multi,levels=unique(groups_multi))
cols_multi <- scales::hue_pal()(length(levels(groups_multi)))[factor(groups_multi)]
genespca(rlt,ntop=100,arrowColors=cols_multi,groupNames=groups_multi)

```

`get_annotation`      *Get an annotation data frame from biomaRt*

## Description

Get an annotation data frame from biomaRt

## Usage

```
get_annotation(dds, biomart_dataset, idtype)
```

## Arguments

<code>dds</code>	A <a href="#">DESeqDataSet</a> object
<code>biomart_dataset</code>	A biomaRt dataset to use. To see the list, type <code>mart = useMart('ensembl')</code> , followed by <code>listDatasets(mart)</code> .
<code>idtype</code>	Character, the ID type of the genes as in the row names of <code>dds</code> , to be used for the call to <a href="#">getBM</a>

## Value

A data frame for ready use in `pcaExplorer`, retrieved from biomaRt.

## Examples

```

library(airway)
data(airway)
airway
dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
                                               colData = colData(airway),
                                               design=~dex+cell)
## Not run:
get_annotation(dds_airway,"hsapiens_gene_ensembl","ensembl_gene_id")
## End(Not run)

```

---

`get_annotation_orgdb`    *Get an annotation data frame from org db packages*

---

**Description**

Get an annotation data frame from org db packages

**Usage**

```
get_annotation_orgdb(dds, orgdb_species, idtype)
```

**Arguments**

<code>dds</code>	A <a href="#">DESeqDataSet</a> object
<code>orgdb_species</code>	Character string, named as the <code>org.XX.eg.db</code> package which should be available in Bioconductor
<code>idtype</code>	Character, the ID type of the genes as in the row names of <code>dds</code> , to be used for the call to <a href="#">mapIds</a>

**Value**

A data frame for ready use in `pcaExplorer`, retrieved from the org db packages

**Examples**

```
library(airway)
data(airway)
airway
dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
                                               colData = colData(airway),
                                               design=~dex+cell)
## Not run:
get_annotation_orgdb(dds_airway, "org.Hs.eg.db", "ENSEMBL")
## End(Not run)
```

---

`hi_loadings`                  *Extract genes with highest loadings*

---

**Description**

Extract genes with highest loadings

**Usage**

```
hi_loadings(pcaobj, whichpc = 1, topN = 10, exprTable = NULL,
            annotation = NULL, title = "Top/bottom loadings")
```

**Arguments**

pcaobj	A prcomp object
whichpc	An integer number, corresponding to the principal component of interest
topN	Integer, number of genes with top and bottom loadings
exprTable	A matrix object, e.g. the counts of a DESeqDataSet. If not NULL, returns the counts matrix for the selected genes
annotation	A data.frame object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, gene_name, containing e.g. HGNC-based gene symbols
title	The title of the plot

**Value**

A ggplot2 object, or a matrix, if exprTable is not null

**Examples**

```
dds <- makeExampleDESeqDataSet_multifac(betaSD = 3,betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaobj <- prcomp(t(SummarizedExperiment::assay(rlt)))
hi_loadings(pcaobj, topN = 20)
hi_loadings(pcaobj, topN = 10, exprTable=dds)
hi_loadings(pcaobj, topN = 10, exprTable=counts(dds))
```

limmaquickpca2go

*Functional interpretation of the principal components, based on simple overrepresentation analysis*

**Description**

Extracts the genes with the highest loadings for each principal component, and performs functional enrichment analysis on them using the simple and quick routine provided by the limma package

**Usage**

```
limmaquickpca2go(se, pca_ngenes = 10000, inputType = "ENSEMBL",
  organism = "Mm", loadings_ngenes = 500, background_genes = NULL,
  scale = FALSE, ...)
```

**Arguments**

se	A DESeqTransform object, with data in assay(se), produced for example by either rlog or varianceStabilizingTransformation
pca_ngenes	Number of genes to use for the PCA
inputType	Input format type of the gene identifiers. Defaults to ENSEMBL, that then will be converted to ENTREZ ids. Can assume values such as ENTREZID,GENENAME or SYMBOL, like it is normally used with the select function of AnnotationDbi
organism	Character abbreviation for the species, using org.XX.eg.db for annotation

<code>loadings_ngenes</code>	Number of genes to extract the loadings (in each direction)
<code>background_genes</code>	Which genes to consider as background.
<code>scale</code>	Logical, defaults to FALSE, scale values for the PCA
<code>...</code>	Further parameters to be passed to the topGO routine

## Value

A nested list object containing for each principal component the terms enriched in each direction. This object is to be thought in combination with the displaying feature of the main `pcaExplorer` function

## Examples

## makeExampleDESeqDataSet\_multifac

*Make a simulated DESeqDataSet for two or more experimental factors*

## Description

Constructs a simulated dataset of Negative Binomial data from different conditions. The fold changes between the conditions can be adjusted with the `betaSD_condition` and the `betaSD_tissue` arguments.

## Usage

```
makeExampleDESeqDataSet_multifac(n = 1000, m = 12,
  betaSD_condition = 1, betaSD_tissue = 3, interceptMean = 4,
  interceptSD = 2, dispMeanRel = function(x) 4/x + 0.1,
  sizeFactors = rep(1, m))
```

**Arguments**

<code>n</code>	number of rows (genes)
<code>m</code>	number of columns (samples)
<code>betaSD_condition</code>	the standard deviation for condition betas, i.e. beta ~ N(0,betaSD)
<code>betaSD_tissue</code>	the standard deviation for tissue betas, i.e. beta ~ N(0,betaSD)
<code>interceptMean</code>	the mean of the intercept betas (log2 scale)
<code>interceptSD</code>	the standard deviation of the intercept betas (log2 scale)
<code>dispMeanRel</code>	a function specifying the relationship of the dispersions on 2^trueIntercept
<code>sizeFactors</code>	multiplicative factors for each sample

**Details**

This function is designed and inspired following the proposal of [makeExampleDESeqDataSet](#) from the DESeq2 package. Credits are given to Mike Love for the nice initial implementation

**Value**

a [DESeqDataSet](#) with true dispersion, intercept for two factors (condition and tissue) and beta values in the metadata columns. Note that the true betas are provided on the log2 scale.

**Examples**

```
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
dds
dds2 <- makeExampleDESeqDataSet_multifac(betaSD_condition = 1,betaSD_tissue = 4)
dds2
```

`pair_corr`*Pairwise scatter and correlation plot of counts***Description**

Pairwise scatter and correlation plot of counts

**Usage**

```
pair_corr(df, method = "pearson")
```

**Arguments**

<code>df</code>	A data frame, containing the (raw/normalized/transformed) counts
<code>method</code>	Character string, one of <code>pearson</code> (default), <code>kendall</code> , or <code>spearman</code> as in <code>cor</code>

**Value**

A plot with pairwise scatter plots and correlation coefficients

## Examples

```
library(airway)
data(airway)
airway
dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
                                               colData = colData(airway),
                                               design=~dex+cell)
pair_corr(counts(dds_airway)[1:100,]) # use just a subset for the example
```

pca2go

*Functional interpretation of the principal components*

## Description

Extracts the genes with the highest loadings for each principal component, and performs functional enrichment analysis on them using routines and algorithms from the topGO package

## Usage

```
pca2go(se, pca_ngenes = 10000, annotation = NULL,
       inputType = "geneSymbol", organism = "Mm", ensToGeneSymbol = FALSE,
       loadings_ngenes = 500, background_genes = NULL, scale = FALSE, ...)
```

## Arguments

se	A <a href="#">DESeqTransform</a> object, with data in assay(se), produced for example by either <a href="#">rlog</a> or <a href="#">varianceStabilizingTransformation</a>
pca_ngenes	Number of genes to use for the PCA
annotation	A <code>data.frame</code> object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, <code>gene_name</code> , containing e.g. HGNC-based gene symbols
inputType	Input format type of the gene identifiers. Will be used by the routines of topGO
organism	Character abbreviation for the species, using <code>org.XX.eg.db</code> for annotation
ensToGeneSymbol	Logical, whether to expect ENSEMBL gene identifiers, to convert to gene symbols with the annotation provided
loadings_ngenes	Number of genes to extract the loadings (in each direction)
background_genes	Which genes to consider as background.
scale	Logical, defaults to FALSE, scale values for the PCA
...	Further parameters to be passed to the topGO routine

## Value

A nested list object containing for each principal component the terms enriched in each direction. This object is to be thought in combination with the displaying feature of the main [pcaExplorer](#) function

## Examples

```

library(airway)
library(DESeq2)
data(airway)
airway
dds_airway <- DESeqDataSet(airway, design= ~ cell + dex)
## Not run:
rld_airway <- rlogTransformation(dds_airway)
# constructing the annotation object
anno_df <- data.frame(gene_id = rownames(dds_airway),
                      stringsAsFactors=FALSE)
library("AnnotationDbi")
library("org.Hs.eg.db")
anno_df$gene_name <- mapIds(org.Hs.eg.db,
                             keys=anno_df$gene_id,
                             column="SYMBOL",
                             keytype="ENSEMBL",
                             multiVals="first")
rownames(anno_df) <- anno_df$gene_id
bg_ids <- rownames(dds_airway)[rowSums(counts(dds_airway)) > 0]
library(pca2go)
pca2go_airway <- pca2go(rld_airway,
                          annotation = anno_df,
                          organism = "Hs",
                          ensToGeneSymbol = TRUE,
                          background_genes = bg_ids)

## End(Not run)

```

pcaExplorer

*Explore a dataset from a PCA perspective*

## Description

Launch a Shiny App for interactive exploration of a dataset from the perspective of Principal Components Analysis

## Usage

```
pcaExplorer(dds = NULL, dst = NULL, countmatrix = NULL,
            coldata = NULL, pca2go = NULL, annotation = NULL)
```

## Arguments

dds	A <a href="#">DESeqDataSet</a> object. If not provided, then a <code>countmatrix</code> and a <code>coldata</code> need to be provided. If none of the above is provided, it is possible to upload the data during the execution of the Shiny App
dst	A <a href="#">DESeqTransform</a> object. Can be computed from the <code>dds</code> object if left <code>NULL</code> . If none is provided, then a <code>countmatrix</code> and a <code>coldata</code> need to be provided. If none of the above is provided, it is possible to upload the data during the execution of the Shiny App

countmatrix	A count matrix, with genes as rows and samples as columns. If not provided, it is possible to upload the data during the execution of the Shiny App
coldata	A data.frame containing the info on the covariates of each sample. If not provided, it is possible to upload the data during the execution of the Shiny App
pca2go	An object generated by the <code>pca2go</code> function, which contains the information on enriched functional categories in the genes that show the top or bottom loadings in each principal component of interest. If not provided, it is possible to compute live during the execution of the Shiny App
annotation	A <code>data.frame</code> object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, <code>gene_name</code> , containing e.g. HGNC-based gene symbols

### Value

A Shiny App is launched for interactive data exploration

### Examples

```
library(airway)
data(airway)
airway
dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
                                                colData = colData(airway),
                                                design=~dex+cell)

## Not run:
rld_airway <- DESeq2::rlogTransformation(dds_airway)

pcaExplorer(dds_airway,rld_airway)

pcaExplorer(countmatrix = counts(dds_airway), coldata = colData(dds_airway))

pcaExplorer() # and then upload count matrix, covariate matrix (and eventual annotation)

## End(Not run)
```

### Description

pcaExplorer provides functionality for interactive visualization of RNA-seq datasets based on Principal Components Analysis. The methods provided allow for quick information extraction and effective data exploration. A Shiny application encapsulates the whole analysis.

### Details

pcaExplorer provides functionality for interactive visualization of RNA-seq datasets based on Principal Components Analysis. The methods provided allow for quick information extraction and effective data exploration. A Shiny application encapsulates the whole analysis.

Maintainer: Federico Marini <[marinif@uni-mainz.de](mailto:marinif@uni-mainz.de)>

**pcaplot**

*Sample PCA plot for transformed data*

**Description**

Plots the results of PCA on a 2-dimensional space

**Usage**

```
pcaplot(x, intgroup = "condition", ntop = 500, returnData = FALSE,
        title = NULL, pcX = 1, pcY = 2, text_labels = TRUE,
        point_size = 3, ellipse = TRUE, ellipse.prob = 0.95)
```

**Arguments**

<b>x</b>	A <a href="#">DESeqTransform</a> object, with data in <code>assay(x)</code> , produced for example by either <a href="#">rlog</a> or <a href="#">varianceStabilizingTransformation</a>
<b>intgroup</b>	Interesting groups: a character vector of names in <code>colData(x)</code> to use for grouping
<b>ntop</b>	Number of top genes to use for principal components, selected by highest row variance
<b>returnData</b>	logical, if TRUE returns a data.frame for further use, containing the selected principal components and intgroup covariates for custom plotting
<b>title</b>	The plot title
<b>pcX</b>	The principal component to display on the x axis
<b>pcY</b>	The principal component to display on the y axis
<b>text_labels</b>	Logical, whether to display the labels with the sample identifiers
<b>point_size</b>	Integer, the size of the points for the samples
<b>ellipse</b>	Logical, whether to display the confidence ellipse for the selected groups
<b>ellipse.prob</b>	Numeric, a value in the interval [0;1)

**Value**

An object created by `ggplot`, which can be assigned and further customized.

**Examples**

```
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaplot(rlt, ntop=200)
```

---

pcaplot3d*Sample PCA plot for transformed data*

---

## Description

Plots the results of PCA on a 3-dimensional space, interactively

## Usage

```
pcaplot3d(x, intgroup = "condition", ntop = 500, returnData = FALSE,
          title = NULL, pcX = 1, pcY = 2, pcZ = 3, text_labels = TRUE,
          point_size = 3)
```

## Arguments

x	A <a href="#">DESeqTransform</a> object, with data in <code>assay(x)</code> , produced for example by either <a href="#">rlog</a> or <a href="#">varianceStabilizingTransformation</a>
intgroup	Interesting groups: a character vector of names in <code>colData(x)</code> to use for grouping
ntop	Number of top genes to use for principal components, selected by highest row variance
returnData	logical, if TRUE returns a data.frame for further use, containing the selected principal components and intgroup covariates for custom plotting
title	The plot title
pcX	The principal component to display on the x axis
pcY	The principal component to display on the y axis
pcZ	The principal component to display on the z axis
text_labels	Logical, whether to display the labels with the sample identifiers
point_size	Integer, the size of the points for the samples

## Value

A html-based visualization of the 3d PCA plot

## Examples

```
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaplot3d(rlt, ntop=200)
```

pcascree

*Scree plot of the PCA on the samples***Description**

Produces a scree plot for investigating the proportion of explained variance, or alternatively the cumulative value

**Usage**

```
pcascree(obj, type = c("pev", "cev"), pc_nr = NULL, title = NULL)
```

**Arguments**

obj	A prcomp object
type	Display absolute proportions or cumulative proportion. Possible values: "pev" or "cev"
pc_nr	How many principal components to display max
title	Title of the plot

**Value**

An object created by ggplot, which can be assigned and further customized.

**Examples**

```
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaobj <- prcomp(t(SummarizedExperiment::assay(rlt)))
pcascree(pcaobj,type="pev")
pcascree(pcaobj,type="cev",title="Cumulative explained proportion of variance - Test dataset")
```

plotPCcorrs

*Plot significance of (cor)relations of covariates VS principal components***Description**

Plots the significance of the (cor)relation of each covariate vs a principal component

**Usage**

```
plotPCcorrs(pccorrs, pc = 1, logp = TRUE)
```

**Arguments**

pccorrs	A data.frame object generated by <a href="#">correlatePCs</a>
pc	An integer number, corresponding to the principal component of interest
logp	Logical, defaults to TRUE, displays the -log10 of the pvalue instead of the p value itself

**Value**

A base plot object

**Examples**

```
library(DESeq2)
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3,betaSD_tissue = 1)
rlt <- rlogTransformation(dds)
pcaobj <- prcomp(t(assay(rlt)))
res <- correlatePCs(pcaobj,colData(dds))
plotPCcorrs(res)
```

**topGOtable**

*Extract functional terms enriched in the DE genes, based on topGO*

**Description**

A wrapper for extracting functional GO terms enriched in the DE genes, based on the algorithm and the implementation in the topGO package

**Usage**

```
topGOtable(DEgenes, BGgenes, ontology = "BP", annot = annFUN.org,
           mapping = "org.Mm.eg.db", geneID = "symbol", topTablerows = 200,
           fullNamesInRows = TRUE, addGeneToTerms = TRUE, plotGraph = FALSE,
           plotNodes = 10, writeOutput = FALSE, outputFile = "")
```

**Arguments**

DEgenes	A vector of (differentially expressed) genes
BGgenes	A vector of background genes, e.g. all (expressed) genes in the assays
ontology	Which Gene Ontology domain to analyze: BP (Biological Process), MF (Molecular Function), or CC (Cellular Component)
annot	Which function to use for annotating genes to GO terms. Defaults to annFUN.org
mapping	Which org.XX.eg.db to use for annotation - select according to the species
geneID	Which format the genes are provided. Defaults to symbol, could also be entrez or ENSEMBL
topTablerows	How many rows to report before any filtering
fullNamesInRows	Logical, whether to display or not the full names for the GO terms
addGeneToTerms	Logical, whether to add a column with all genes annotated to each GO term
plotGraph	Logical, if TRUE additionally plots a graph on the identified GO terms
plotNodes	Number of nodes to plot
writeOutput	Logical, if TRUE additionally writes out the result to a file
outputFile	Name of the file the result should be written into

## Value

A table containing the computed GO Terms and related enrichment scores

## Examples
