

# Package ‘RCy3’

October 16, 2019

**Type** Package

**Title** Functions to Access and Control Cytoscape

**Version** 2.4.6

**Date** 2019-10-03

**Imports** htr, methods, RJSONIO, XML, utils, BiocGenerics, igraph, stats, graph, R.utils

**Suggests** RUnit, BiocStyle, knitr, rmarkdown

**SystemRequirements** Cytoscape (>= 3.7.1), CyREST (>= 3.8.0)

**Description** Vizualize, analyze and explore networks using Cytoscape via R.

**License** MIT + file LICENSE

**URL** <https://github.com/cytoscape/RCy3>

**BugReports** <https://github.com/cytoscape/RCy3/issues>

**LazyLoad** yes

**biocViews** Visualization, GraphAndNetwork, ThirdPartyClient, Network

**NeedsCompilation** no

**VignetteBuilder** knitr

**RoxygenNote** 6.1.1

**git\_url** <https://git.bioconductor.org/packages/RCy3>

**git\_branch** RELEASE\_3\_9

**git\_last\_commit** fe7b8f6

**git\_last\_commit\_date** 2019-10-03

**Date/Publication** 2019-10-15

**Author** Alex Pico [aut, cre] (<<https://orcid.org/0000-0001-5706-2163>>),  
Tanja Muetze [aut],  
Paul Shannon [aut],  
Ruth Isserlin [ctb],  
Shraddha Pai [ctb],  
Julia Gustavsen [ctb],  
Georgi Kolishovski [ctb]

**Maintainer** Alex Pico <[alex.pico@gladstone.ucsf.edu](mailto:alex.pico@gladstone.ucsf.edu)>

`addCyEdges`*Add CyEdges***Description**

Add one or more edges to a Cytoscape network by listing source and target node pairs.

**Usage**

```
addCyEdges(source.target.list, edgeType = "interacts with",
           directed = FALSE, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>source.target.list</code>	A list (or list of lists) of source and target node pairs
<code>edgeType</code>	The type of interaction. Default is 'interacts with'.
<code>directed</code>	boolean for whether interactions are directed. Default is FALSE.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list of named lists of SUID, source and target for each edge added.

**Examples**

```
addCyEdges(c('sourceNode', 'targetNode'))
addCyEdges(list(c('s1', 't1'), c('s2', 't2')))
```

`addCyNodes`*Add CyNodes***Description**

Add one or more nodes to a Cytoscape network.

**Usage**

```
addCyNodes(node.names, skip.duplicate.names = TRUE, network = NULL,
           base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	A list of node names
<code>skip.duplicate.names</code>	Skip adding a node if a node with the same name is already in the network. If FALSE then a duplicate node (with a unique SUID) will be added. Default is TRUE.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list of named lists of name and SUID for each node added.

**Examples**

```
addCyNodes()
```

AddToGroup

*Add to Group*

**Description**

Adds the specified nodes and edges to the specified group.

**Usage**

```
AddToGroup(group.name, nodes = NULL, nodes.by.col = "SUID",
edges = NULL, edges.by.col = "SUID", network = NULL,
base.url = .defaultBaseUrl)
```

**Arguments**

<code>group.name</code>	Specifies the name used to identify the group
<code>nodes</code>	List of node SUIDs, names, other column values, or keyword: selected, unselected or all. Default is currently selected nodes.
<code>nodes.by.col</code>	name of node table column corresponding to provided nodes list. Default is 'SUID'.
<code>edges</code>	List of edge SUIDs, names, other column values, or keyword: selected, unselected or all. Default is currently selected edges.
<code>edges.by.col</code>	name of edge table column corresponding to provided edges list. Default is 'SUID'.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
AddToGroup()
```

**applyFilter**

*Apply Filter*

**Description**

Run an existing filter by supplying the filter name.

**Usage**

```
applyFilter(filter.name = "Default filter", hide = FALSE,
           network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>filter.name</code>	Name of filter to apply. Default is "Default filter".
<code>hide</code>	Whether to hide filtered out nodes and edges. Default is FALSE. Ignored if all nodes or edges are filtered out. This is an alternative to filtering for node and edge selection.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Known bug: selection (or hiding) of edges using edge-based column filters does not work. As a workaround, simply repeat the `createColumnFilter` operation to perform selection (or hiding) of edges.

**Value**

List of selected nodes and edges.

**See Also**

`unhideAll`

**Examples**

```
applyFilter('myFilter')
applyFilter('myFilter', hide = TRUE)
```

---

**bundleEdges***Bundle Edges*

---

## Description

Apply edge bundling to the network specified. Edge bundling is executed with default parameters; optional parameters are not supported.

## Usage

```
bundleEdges(network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
bundleEdges()
```

---

**clearEdgePropertyBypass***Clear Edge Property Bypass*

---

## Description

Clear bypass values for any edge property of the specified edges, effectively restoring any previously defined style defaults or mappings.

## Usage

```
clearEdgePropertyBypass(edge.names, visual.property, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

<code>edge.names</code>	List of edge names. Pending CyREST updates, if set to 'all', then the property is cleared for all edges.
<code>visual.property</code>	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

[setEdgePropertyBypass](#)

**Examples**

```
clearEdgePropertyBypass()
```

**clearNetworkCenterBypass**

*Clear Network Center Bypass*

**Description**

Clear the bypass value for center x and y for the network, effectively restoring prior default values.

**Usage**

```
clearNetworkCenterBypass(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

## Examples

```
clearNetworkCenterBypass()
```

---

```
clearNetworkPropertyBypass
```

*Clear Network Property Bypass*

---

## Description

Clear bypass values for any network property, effectively restoring any previously defined style defaults or mappings.

## Usage

```
clearNetworkPropertyBypass(visual.property, network = NULL,  
                           base.url = .defaultBaseUrl)
```

## Arguments

visual.property	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## See Also

[setNodePropertyBypass](#)

## Examples

```
clearNetworkPropertyBypass()
```

---

```
clearNetworkZoomBypass
```

*Clear Network Zoom Bypass*

---

## Description

Clear the bypass value for the scale factor for the network, effectively restoring prior default values.

## Usage

```
clearNetworkZoomBypass(network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
clearNetworkZoomBypass()
```

---

```
clearNodeOpacityBypass
```

*Clear Node Opacity Bypass*

---

## Description

Clear the bypass value for node fill, label and border opacity for the specified node or nodes, effectively restoring any previously defined style defaults or mappings.

## Usage

```
clearNodeOpacityBypass(node.names, network = NULL,  
                      base.url = .defaultBaseUrl)
```

## Arguments

node.names	List of node names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

[setNodeOpacityBypass](#)

**Examples**

```
clearNodeOpacityBypass(c('Node 1','Node 2'))
```

---

```
clearNodePropertyBypass
```

*Clear Node Property Bypass*

---

**Description**

Clear bypass values for any node property of the specified nodes, effectively restoring any previously defined style defaults or mappings.

**Usage**

```
clearNodePropertyBypass(node.names, visual.property, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names. Pending CyREST updates, if set to 'all', then the property is cleared for all nodes.
visual.property	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

[setNodePropertyBypass](#)

**Examples**

```
clearNodePropertyBypass()
```

---

clearSelection	<i>Clear Selection</i>
----------------	------------------------

---

**Description**

If any nodes are selected in the network, they will be unselected.

**Usage**

```
clearSelection(type = "both", network = NULL,  
              base.url = .defaultBaseUrl)
```

**Arguments**

type	'nodes', 'edges' or 'both' (default)
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Author(s)**

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
clearSelection()
```

---

cloneNetwork	<i>Clone a Cytoscape Network</i>
--------------	----------------------------------

---

**Description**

Makes a copy of a Cytoscape Network with all of its edges and nodes.

**Usage**

```
cloneNetwork(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	name or uid of the network you want to clone; default is "current" network
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

The uid of the new network

**Author(s)**

Alexander Pico, Julia Gustavsen

**Examples**

```
## Not run:  
cloneNetwork("cloned network")  
  
## End(Not run)
```

---

closeSession

*Close Session*

---

**Description**

Closes the current session in Cytoscape, destroying all unsaved work.

**Usage**

```
closeSession(save.before.closing, filename = NULL,  
            base.url = .defaultBaseUrl)
```

**Arguments**

save.before.closing	boolean Whether to save before closing the current session. If FALSE, then all unsaved work will be lost.
filename	(optional) If save.before.closing is TRUE and the session has not previously been saved, then the path and name of the session file to save should be provided. Default is NULL.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

A boolean for whether to save before closing is required since you could lose data by closing without saving.

**Value**

None

**Examples**

```
closeSession(FALSE)
closeSession(TRUE, '/fullpath/mySession')
closeSession(TRUE)
```

**collapseGroup**

*Collapse Group*

**Description**

Replaces the representation of all of the nodes and edges in a group with a single node.

**Usage**

```
collapseGroup(groups = NULL, network = NULL,
base.url = .defaultBaseUrl)
```

**Arguments**

groups	(optional) List of group names or keywords: all, selected, unselected. Default is the currently selected group.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
collapseGroup()
```

---

commandEcho

*Command Echo*

---

### Description

The echo command will display the value of the variable specified by the `variableName` argument, or all variables if `variableName` is not provided.

### Usage

```
commandEcho(variable.name = "*", base.url = .defaultBaseUrl)
```

### Arguments

<code>variable.name</code>	(optional) The name of the variable to display. Default is to display all variable values using <code>"*"</code> .
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

### Value

Value of variable

### Examples

```
commandEcho()
```

---

commandOpenDialog

*Command Open Dialog*

---

### Description

The command line dialog provides a field to enter commands and view results. It also provides the help command to display namespaces, commands, and arguments

### Usage

```
commandOpenDialog(base.url = .defaultBaseUrl)
```

### Arguments

<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.
-----------------------	---

### Value

None

## Examples

```
commandOpenDialog()
```

**commandPause**

*Command Pause*

## Description

The pause command displays a dialog with the text provided in the message argument and waits for the user to click OK.

## Usage

```
commandPause(message = "", base.url = .defaultBaseUrl)
```

## Arguments

<b>message</b>	(optional) Text to display in pause dialog
<b>base.url</b>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
commandPause('Please click OK to continue.')
```

**commandQuit**

*Command Quit*

## Description

This command causes Cytoscape to exit. It is typically used at the end of a script file

## Usage

```
commandQuit(base.url = .defaultBaseUrl)
```

## Arguments

<b>base.url</b>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
-----------------	--

**Value**

None

**Examples**

```
commandQuit()
```

---

commandRunFile

*Command Run File*

---

**Description**

The run command will execute a command script from the file pointed to by the file argument, which should contain Cytoscape commands, one per line. Arguments to the script are provided by the args argument

**Usage**

```
commandRunFile(file, args = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

file	Path to command script file
args	The script arguments as key:value pairs separated by commas
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
commandRunFile('/path/to/my/file.txt')
```

commandsAPI

*Open Swagger docs for CyREST Commands API***Description**

Opens swagger docs in default browser for a live instance of Commands available via CyREST.

**Usage**

```
commandsAPI(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

Web page in browser

**Examples**

```
commandsAPI()
```

commandsGET

*Commands GET***Description**

Using the same syntax as Cytoscape's Command Line Dialog, this function converts a command string into a CyREST query URL, executes a GET request, and parses the result content into an R list object.

**Usage**

```
commandsGET(cmd.string, base.url = .defaultBaseUrl)
```

**Arguments**

cmd.string	(char) command
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list, status or None.

## Examples

```
commandsGET('layout get preferred')
commandsGET('network list properties')
commandsGET('layout force-directed defaultNodeMass=1')
```

---

commandsHelp

*Commands Help*

---

## Description

Using the same syntax as Cytoscape's Command Line Dialog, this function returns a list of available commands or args.

## Usage

```
commandsHelp(cmd.string = "help", base.url = .defaultBaseUrl)
```

## Arguments

cmd.string	(char) command
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

Works with or without 'help' command prefix. Note that if you ask about a command that doesn't have any arguments, this function will run the command!

## Value

List of available commands or args

## Examples

```
commandsHelp()
commandsHelp('node')
commandsHelp('node get attribute')
```

`commandSleep`*Command Sleep***Description**

The sleep command will pause processing for a period of time as specified by duration seconds. It is typically used as part of a command script.

**Usage**

```
commandSleep(duration = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>duration</code>	(optional) The time in seconds to sleep
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, #' port or version to connect to the CyREST API. Default is http://localhost:1234 #' and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
commandSleep(5)
```

`commandsPOST`*Commands POST***Description**

Using the same syntax as Cytoscape's Command Line Dialog, this function converts a command string into a CyREST query URL, executes a POST request, and parses the result content into an R list object.

**Usage**

```
commandsPOST(cmd.string, base.url = .defaultBaseUrl)
```

**Arguments**

<code>cmd.string</code>	(char) command
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list, named list, status or None.

**Examples**

```
commandsPOST('layout get preferred')
commandsPOST('network list properties')
commandsPOST('layout force-directed defaultNodeMass=1')
```

---

commandsRun

*Run a Command*

---

**Description**

Using the same syntax as Cytoscape's Command Line Dialog, this function converts a command string into a CyREST query URL, executes a GET request, and parses the result content into an R list object. Same as commandsGET.

**Usage**

```
commandsRun(cmd.string, base.url = .defaultBaseUrl)
```

**Arguments**

cmd.string	(char) command
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list, status or None.

**Examples**

```
commandsRun('layout get preferred')
commandsRun('network list properties')
commandsRun('layout force-directed defaultNodeMass=1')
```

---

copyVisualStyle	<i>Copy Visual Style</i>
-----------------	--------------------------

---

## Description

Create a new visual style by copying a specified style.

## Usage

```
copyVisualStyle(from.style, to.style, base.url = .defaultBaseUrl)
```

## Arguments

from.style	Name of visual style to copy
to.style	Name of new visual style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
copyVisualStyle()
```

---

createColumnFilter	<i>Create Column Filter</i>
--------------------	-----------------------------

---

## Description

Creates a filter to control node or edge selection. Works on columns of boolean, string, numeric and lists. Note the unique restrictions for criterion and predicate depending on the type of column being filtered.

## Usage

```
createColumnFilter(filter.name, column, criterion, predicate,
  caseSensitive = FALSE, anyMatch = TRUE, type = "nodes",
  hide = FALSE, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>filter.name</code>	Name for filter.
<code>column</code>	Table column to base filter upon.
<code>criterion</code>	For boolean columns: TRUE or FALSE. For string columns: a string value, e.g., "hello". If the predicate is REGEX then this can be a regular expression as accepted by the Java Pattern class ( <a href="https://docs.oracle.com/javase/7/docs/api/java/util/regex/Pattern.html">https://docs.oracle.com/javase/7/docs/api/java/util/regex/Pattern.html</a> ). For numeric columns: If the predicate is BETWEEN or IS_NOT_BETWEEN then this is a two-element vector of numbers, example: c(1,5), otherwise a single number.
<code>predicate</code>	For boolean columns: IS, IS_NOT. For string columns: IS, IS_NOT, CONTAINS, DOES_NOT_CONTAIN, REGEX. For numeric columns: IS, IS_NOT, GREATER_THAN, GREATER_THAN_OR_EQUAL, LESS_THAN, LESS_THAN_OR_EQUAL, BETWEEN, IS_NOT_BETWEEN
<code>caseSensitive</code>	(optional) If string matching should be case sensitive. Default is FALSE.
<code>anyMatch</code>	(optional) Only applies to List columns. If true then at least one element in the list must pass the filter, if false then all the elements in the list must pass the filter. Default is TRUE.
<code>type</code>	(optional) Apply filter to "nodes" (default) or "edges".
<code>hide</code>	Whether to hide filtered out nodes and edges. Default is FALSE. Ignored if all nodes or edges are filtered out. This is an alternative to filtering for node and edge selection.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

List of selected nodes and edges.

**Examples**

```
createColumnFilter('myFilter', 'log2FC', c(-1,1), "IS_NOT_BETWEEN")
createColumnFilter('myFilter', 'pValue', 0.05, "LESS_THAN")
createColumnFilter('myFilter', 'function', "kinase", "CONTAINS", FALSE)
createColumnFilter('myFilter', 'name', "^Y.*C$", "REGEX")
createColumnFilter('myFilter', 'isTarget', TRUE , "IS")
createColumnFilter('myFilter', 'isTarget', TRUE , "IS", hide = TRUE)
```

`createCompositeFilter` *Create Composite Filter*

**Description**

Combines filters to control node and edge selection based on previously created filters.

**Usage**

```
createCompositeFilter(filter.name, filter.list, type = "ALL",
  hide = FALSE, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>filter.name</code>	Name for filter.
<code>filter.list</code>	List of filters to combine.
<code>type</code>	(optional) Type of composition, requiring ALL (default) or ANY filters to pass for final node and edge selection.
<code>hide</code>	Whether to hide filtered out nodes and edges. Default is FALSE. Ignored if all nodes or edges are filtered out. This is an alternative to filtering for node and edge selection.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

List of selected nodes and edges.

**Examples**

```
createCompositeFilter("comp1", c("filter1", "filter2"))
createCompositeFilter("comp2", c("filter1", "filter2"), "ANY")
createCompositeFilter("comp3", c("comp1", "filter3"))
```

`createDegreeFilter`      *Create Degree Filter*

**Description**

Creates a filter to control node selection base on in/out degree.

**Usage**

```
createDegreeFilter(filter.name, criterion, predicate = "BETWEEN",
  edgeType = "ANY", hide = FALSE, network = NULL,
  base.url = .defaultBaseUrl)
```

**Arguments**

<code>filter.name</code>	Name for filter.
<code>criterion</code>	A two-element vector of numbers, example: <code>c(1,5)</code> .
<code>predicate</code>	<code>BETWEEN</code> (default) or <code>IS_NOT_BETWEEN</code>
<code>edgeType</code>	(optional) Type of edges to consider in degree count: <code>ANY</code> (default), <code>UNDIRECTED</code> , <code>INCOMING</code> , <code>OUTGOING</code> , <code>DIRECTED</code>
<code>hide</code>	Whether to hide filtered out nodes and edges. Default is <code>FALSE</code> . Ignored if all nodes or edges are filtered out. This is an alternative to filtering for node and edge selection.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

List of selected nodes and edges.

**Examples**

```
createDegreeFilter('myFilter', c(2,5))
```

---

*createGraphFromNetwork*

*createGraphFromNetwork*

---

**Description**

Returns the Cytoscape network as a Bioconductor graph.

**Usage**

```
createGraphFromNetwork(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A Bioconductor graph object.

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
cw <- CytoscapeWindow('network', graph=make_graphne1())
g <- createGraphFromNetwork()
g <- createGraphFromNetwork('myNetwork')
```

**createGroup**

*Create Group*

**Description**

Create a group from the specified nodes.

**Usage**

```
createGroup(group.name, nodes = NULL, nodes.by.col = "SUID",
           network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>group.name</code>	Specifies the name used to identify the group
<code>nodes</code>	List of node SUIDs, names, other column values, or keyword: selected, unselected or all. Default is currently selected nodes.
<code>nodes.by.col</code>	name of node table column corresponding to provided nodes list. Default is 'SUID'.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Group SUID

**Examples**

```
createGroup()
```

---

**createIgraphFromNetwork**

*Create an igraph network from a Cytoscape network*

---

**Description**

Takes a Cytoscape network and generates data frames for vertices and edges to send to the graph\_from\_data\_frame function. Returns the network.suid and applies the preferred layout set in Cytoscape preferences.

**Usage**

```
createIgraphFromNetwork(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Nodes and edges from the Cytoscape network will be translated into vertices and edges in igraph. Associated table columns will also be passed to igraph as vertex and edge attributes. Note: all networks are implicitly modeled as directed in Cytoscape. Round-trip conversion of an undirected network in igraph via createNetworkFromIgraph to Cytoscape and back to igraph will result in a directed network.

**Value**

(igraph) an igraph network

**See Also**

[createNetworkFromDataFrames](#), [createNetworkFromIgraph](#)

**Examples**

```
ig <- createIgraphFromNetwork()  
ig <- createIgraphFromNetwork('myNetwork')
```

---

`createNetworkFromDataFrames`  
*Create a network from data frames*

---

## Description

Takes data frames for nodes and edges, as well as naming parameters to generate the JSON data format required by the "networks" POST operation via CyREST. Returns the network.suid and applies the preferred layout set in Cytoscape preferences.

## Usage

```
createNetworkFromDataFrames(nodes = NULL, edges = NULL,
  title = "From dataframe",
  collection = "My Dataframe Network Collection",
  base.url = .defaultBaseUrl, ...)
```

## Arguments

<code>nodes</code>	(data.frame) see details and examples below; default NULL to derive nodes from edge sources and targets
<code>edges</code>	(data.frame) see details and examples below; default NULL for disconnected set of nodes
<code>title</code>	(char) network name
<code>collection</code>	(char) network collection name
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
<code>...</code>	params for nodeSet2JSON() and edgeSet2JSON()

## Details

NODES should contain a column of character strings named: `id`. This name can be overridden by the arg: `node.id.list`. Additional columns are loaded as node attributes. EDGES should contain columns of character strings named: `source`, `target` and `interaction`. These names can be overridden by args: `source.id.list`, `target.id.list`, `interaction.type.list`. Additional columns are loaded as edge attributes. The '`interaction`' list can contain a single value to apply to all rows; and if excluded altogether, the interaction type will be set to "interacts with". NOTE: attribute values of types (num) will be imported as (Double); (int) as (Integer); (chr) as (String); and (logical) as (Boolean). List types are not supported and ignored upon import.

## Value

(int) network SUID

**Examples**

```

nodes <- data.frame(id=c("node 0","node 1","node 2","node 3"),
                     group=c("A","A","B","B"), # categorical strings
                     score=as.integer(c(20,10,15,5)), # integers
                     stringsAsFactors=FALSE)
edges <- data.frame(source=c("node 0","node 0","node 0","node 2"),
                     target=c("node 1","node 2","node 3","node 3"),
                     interaction=c("inhibits","interacts","activates","interacts"), # optional
                     weight=c(5.1,3.0,5.2,9.9), # numeric
                     stringsAsFactors=FALSE)

createNetworkFromDataFrames(nodes,edges)

```

**createNetworkFromGraph***Create Network From Graph***Description**

Creates a Cytoscape network from a Bioconductor graph.

**Usage**

```
createNetworkFromGraph(graph, title = "From graph",
                      collection = "My GraphNEL Network Collection",
                      base.url = .defaultBaseUrl)
```

**Arguments**

<code>graph</code>	A GraphNEL object
<code>title</code>	(char) network name
<code>collection</code>	(char) network collection name
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Network SUID

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```

library(graph)
g <- makeSimpleGraph()
createNetworkFromGraph(g)

```

---

**createNetworkFromIgraph**

*Create a Cytoscape network from an igraph network*

---

**Description**

Takes an igraph network and generates data frames for nodes and edges to send to the `createNetwork` function. Returns the `network.suid` and applies the preferred layout set in Cytoscape preferences.

**Usage**

```
createNetworkFromIgraph(igraph, title = "From igraph",
  collection = "My Igraph Network Collection",
  base.url = .defaultBaseUrl, ...)
```

**Arguments**

<code>igraph</code>	(igraph) igraph network object
<code>title</code>	(char) network name
<code>collection</code>	(char) network collection name
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.
<code>...</code>	params for <code>nodeSet2JSON()</code> and <code>edgeSet2JSON()</code> ; see <code>createNetwork</code>

**Details**

Vertices and edges from the igraph network will be translated into nodes and edges in Cytoscape. Associated attributes will also be passed to Cytoscape as node and edge table columns. Note: undirected networks will be implicitly modeled as directed in Cytoscape. Conversion back via `createIgraphFromNetwork` will result in a directed network. Also note: igraph attributes of type "other" denoted by "x" are converted to "String" in Cytoscape.

**Value**

(int) network SUID

**See Also**

`createNetworkFromDataFrames`, `createIgraphFromNetwork`

**Examples**

```
library(igraph)
ig <- makeSimpleIgraph()
createNetworkFromIgraph(ig)
```

---

createSubnetwork	<i>Create subnetwork from existing network</i>
------------------	--

---

## Description

Copies a subset of nodes and edges into a newly created subnetwork.

## Usage

```
createSubnetwork(nodes = NULL, nodes.by.col = "SUID", edges = NULL,
edges.by.col = "SUID", exclude.edges = FALSE,
subnetwork.name = NULL, network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

nodes	list of node names or keyword: selected, unselected or all. Default is currently selected nodes.
nodes.by.col	name of node table column corresponding to provided nodes list; default is 'SUID'
edges	list of edge names or keyword: selected, unselected or all. Default is currently selected edges.
edges.by.col	name of edge table column corresponding to provided edges list; default is 'SUID'
exclude.edges	(boolean) whether to exclude connecting edges; default is FALSE
subnetwork.name	name of new subnetwork to be created; default is to add a numbered suffix to source network name
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

If you spe@param base.url (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.cify both nodes and edges, the resulting subset will be the union of those sets. Typical usage only requires specifying either nodes or edges. Note that selected nodes will bring along their connecting edges by default (see exclude.edges arg) and selected edges will always bring along their source and target nodes.

## Value

SUID of new subnetwork

## Examples

```
createSubnetwork()
createSubnetwork("all")
createSubnetwork(subnetwork.name="mySubnetwork")
createSubnetwork(c("node 1", "node 2", "node 3"), "name")
createSubnetwork(c("AKT1", "TP53", "PIK3CA"), "display name")
createSubnetwork(edges="all") #subnetwork of all connected nodes
```

## createVisualStyle

*Create a visual style from components*

## Description

Create a style from defaults and predefined mappings.

## Usage

```
createVisualStyle(style.name, defaults, mappings,
                 base.url = .defaultBaseUrl)
```

## Arguments

style.name	(char) name for style
defaults	(list) key-value pairs for default mappings.
mappings	(list) visual property mappings, see mapVisualProperty
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

Requires attribute mappings to be previously created, see mapVisualProperty.

## Value

None

## See Also

[applyStyle](#), [mapVisualProperty](#)

## Examples

```
#first there has to be a network to apply style to
example(createNetworkFromDataFrames)

#then prepare style variables
style.name = "myStyle"
defaults <- list(NODE_SHAPE="diamond",
```

```
NODE_SIZE=30,  
EDGE_TRANSPARENCY=120,  
NODE_LABEL_POSITION="W,E,c,0.00,0.00")  
nodeLabels <- mapVisualProperty('node label','id','p')  
nodeFills <- mapVisualProperty('node fill color','group','d',c("A","B"), c("#FF9900","#66AAAA"))  
arrowShapes <- mapVisualProperty('Edge Target Arrow Shape','interaction','d',  
                                 c("activates","inhibits","interacts"),c("Arrow","T","None"))  
edgeWidth <- mapVisualProperty('edge width','weight','p')  
  
#and then create the style  
createVisualStyle(style.name, defaults, list(nodeLabels,nodeFills,arrowShapes,edgeWidth))  
  
#finsh by applying the style  
setVisualStyle(style.name)
```

---

**cybrowserClose***Cybrowser Close*

---

**Description**

Close an internal web browser and remove all content. Provide an id for the browser you want to close.

**Usage**

```
cybrowserClose(id = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>id</code>	(optional) The identifier for the browser window to close
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
cybrowserClose('554')
```

---

**cybrowserDialog**      *Cybrowser Dialog*

---

### Description

Launch Cytoscape's internal web browser in a separate window. Provide an id for the window if you want subsequent control of the window e.g., via cybrowser hide.

### Usage

```
cybrowserDialog(id = NULL, text = NULL, title = NULL, url = NULL,  
base.url = .defaultBaseUrl)
```

### Arguments

<code>id</code>	(optional) The identifier for the browser window
<code>text</code>	(optional) HTML text to initially load into the browser
<code>title</code>	(optional) Text to be shown in the title bar of the browser window
<code>url</code>	(optional) The URL the browser should load
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### See Also

[cybrowserShow](#)  
[cybrowserHide](#)

### Examples

```
cybrowserDialog(url='http://cytoscape.org')
```

---

**cybrowserHide**      *Cybrowser Hide*

---

### Description

Hide an existing browser, whether it's in the Results panel or a separate window.

### Usage

```
cybrowserHide(id = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

id	(optional) The identifier for the browser window to hide
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

[cybrowserShow](#)  
[cybrowserDialog](#)

**Examples**

```
cybrowserHide()
```

---

cybrowserList            *Cybrowser List*

---

**Description**

List all browsers that are currently open, whether as a dialog or in the results panel.

**Usage**

```
cybrowserList(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

List of open cybrowser windows

**Examples**

```
cybrowserList()
```

---

`cybrowserSend`*Cybrowser Send*

---

## Description

Send the text to the browser indicated by the id and return the response, if any. Note that the JSON result field could either be a bare string or JSON formatted text.

## Usage

```
cybrowserSend(id = NULL, script, base.url = .defaultBaseUrl)
```

## Arguments

<code>id</code>	(optional) The identifier for the browser window
<code>script</code>	(optional) A string that represents a JavaScript variable, script, or call to be executed in the browser. Note that only string results are returned.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

String result

## Examples

```
cybrowserSend(id="Window 1", script="navigator.userAgent;")
```

---

`cybrowserShow`*Cybrowser Show*

---

## Description

Launch Cytoscape's internal web browser in a pane in the Result Panel. Provide an id for the window if you want subsequent control of the window via cybrowser hide.

## Usage

```
cybrowserShow(id = NULL, text = NULL, title = NULL, url = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

id	(optional) The identifier for the browser window
text	(optional) HTML text to initially load into the browser
title	(optional) Text to be shown in the title bar of the browser window
url	(optional) The URL the browser should load
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

[cybrowserDialog](#)  
[cybrowserHide](#)

**Examples**

```
cybrowserShow(url='http://cytoscape.org')
```

---

cybrowserVersion      *Cybrowser Version*

---

**Description**

Display the version of the CyBrowser app.

**Usage**

```
cybrowserVersion(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

Version number

**Examples**

```
cybrowserVersion()
```

cyrestAPI

*Open Swagger docs for CyREST API***Description**

Opens swagger docs in default browser for a live instance of CyREST operations.

**Usage**

```
cyrestAPI(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

Web page in browser

**Examples**

```
cyrestAPI()
```

cyrestDELETE

*CyREST DELETE***Description**

Constructs the query, makes DELETE call and processes the result

**Usage**

```
cyrestDELETE(operation = NULL, parameters = NULL,
            base.url = .defaultBaseUrl)
```

**Arguments**

operation	A string to be converted to the REST query namespace
parameters	A named list of values to be converted to REST query parameters
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

CyREST result content

**Examples**

```
cyrestDELETE()
```

---

cyrestGET

*CyREST GET*

---

**Description**

Constructs the query, makes GET call and processes the result

**Usage**

```
cyrestGET(operation = NULL, parameters = NULL,  
          base.url = .defaultBaseUrl)
```

**Arguments**

operation	A string to be converted to the REST query namespace
parameters	A named list of values to be converted to REST query parameters
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

CyREST result content

**Examples**

```
cyrestGET()
```

---

cyrestPOST

*CyREST POST*

---

**Description**

Constructs the query and body, makes POST call and processes the result

**Usage**

```
cyrestPOST(operation, parameters = NULL, body = NULL,  
           base.url = .defaultBaseUrl)
```

**Arguments**

<code>operation</code>	A string to be converted to the REST query namespace
<code>parameters</code>	A named list of values to be converted to REST query parameters
<code>body</code>	A named list of values to be converted to JSON
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

CyREST result content

**Examples**

```
cyrestPOST()
```

---

cyrestPUT

*CyREST PUT*

---

**Description**

Constructs the query and body, makes PUT call and processes the result

**Usage**

```
cyrestPUT(operation, parameters = NULL, body = FALSE,
          base.url = .defaultBaseUrl)
```

**Arguments**

<code>operation</code>	A string to be converted to the REST query namespace
<code>parameters</code>	A named list of values to be converted to REST query parameters
<code>body</code>	A named list of values to be converted to JSON
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

CyREST result content

**Examples**

```
cyrestPUT()
```

---

cytoscapeApiVersions    *Available CyREST API Versions*

---

## Description

Get the list of available CyREST API versions

## Usage

```
cytoscapeApiVersions(base.url = .defaultBaseUrl)
```

## Arguments

base.url        (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

A list of API versions as character strings, e.g., "v1"

## Author(s)

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

## Examples

```
cytoscapeApiVersions()  
# [1] "v1"
```

---

cytoscapeFreeMemory    *Free Up Unused Memory for Cytoscape*

---

## Description

Manually call Java's garbage collection `System.gc()` to free up unused memory. This process happens automatically, but may be useful to call explicitly for testing or evaluation purposes.

## Usage

```
cytoscapeFreeMemory(base.url = .defaultBaseUrl)
```

## Arguments

base.url        (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

```
status message
```

**Author(s)**

Alexander Pico

**Examples**

```
cytoscapeFreeMemory()  
# [1] "Unused memory freed up."
```

---

cytoscapeMemoryStatus *Memory Available to Cytoscape*

---

**Description**

Returns the memory resources of the server running Cytoscape

**Usage**

```
cytoscapeMemoryStatus(base.url = .defaultBaseUrl)
```

**Arguments**

base.url (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list of numeric values

**Author(s)**

Alexander Pico

**Examples**

```
cytoscapeMemoryStatus()  
# usedMemory freeMemory totalMemory maxMemory  
# 181 2624 2805 13653
```

---

```
cytoscapeNumberOfCores
```

*Number of Processors Available to Cytoscape*

---

## Description

Returns the processor resources of the server running Cytoscape

## Usage

```
cytoscapeNumberOfCores(base.url = .defaultBaseUrl)
```

## Arguments

`base.url` (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is `http://localhost:1234` and the latest version of the CyREST API supported by this version of RCy3.

## Value

A numeric value

## Author(s)

Alexander Pico

## Examples

```
cytoscapeNumberOfCores()  
# [1] 8
```

---

```
cytoscapePing
```

*Ping Cytoscape*

---

## Description

Tests the connection to Cytoscape via CyREST and verifies that supported versions of Cytoscape and CyREST API are loaded.

## Usage

```
cytoscapePing(base.url = .defaultBaseUrl)
```

## Arguments

`base.url` (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is `http://localhost:1234` and the latest version of the CyREST API supported by this version of RCy3.

**Value**

status message

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
cytoscapePing()  
# [1] "You are connected to Cytoscape!"
```

---

cytoscapeVersionInfo    *Cytoscape and CyREST API Versions*

---

**Description**

Returns the versions of the current Cytoscape and CyREST API

**Usage**

```
cytoscapeVersionInfo(base.url = .defaultBaseUrl)
```

**Arguments**

base.url        (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of versions

**Author(s)**

Alexander Pico

**Examples**

```
cytoscapeVersionInfo()  
# apiVersion cytoscapeVersion  
#       "v1" "3.7.0-SNAPSHOT"
```

---

**deleteAllNetworks**      *Delete All Networks*

---

**Description**

Delete all networks from the current Cytoscape session.

**Usage**

```
deleteAllNetworks(base.url = .defaultBaseUrl)
```

**Arguments**

**base.url**      (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
deleteAllNetworks()
```

---

**deleteDuplicateEdges**      *Delete Duplicate Edges*

---

**Description**

Removes edges with duplicate names. Only considers cases with identical source, target, interaction and directionality.

**Usage**

```
deleteDuplicateEdges(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

**network**      (optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.

**base.url**      (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Duplicate edges are first selected and then deleted. Prior edge selections will be lost; node selections will not be affected.

**Value**

Lists of SUIDs for selected nodes and edges

**Examples**

```
deleteDuplicateEdges()
```

---

**deleteGroup***Delete (or Ungroup) a Group*

---

**Description**

Deletes one or more groups, while leaving member nodes intact.

**Usage**

```
deleteGroup(groups = NULL, groups.by.col = "SUID", network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

groups	(optional) List of group SUIDs, names, other column values or keywords: all, selected, unselected. Default is the currently selected group.
groups.by.col	name of node table column corresponding to provided groups list. Default is 'SUID'.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Note: group nodes are ungrouped but not deleted in Cytoscape version 3.6.1

**Value**

None

**Examples**

```
deleteGroup()
```

---

deleteNetwork	<i>Delete Network</i>
---------------	-----------------------

---

### Description

Delete a network from the current Cytoscape session.

### Usage

```
deleteNetwork(network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
deleteNetwork()
```

---

deleteSelectedEdges	<i>Delete Selected Edges</i>
---------------------	------------------------------

---

### Description

Delete the currently selected edges in the network.

### Usage

```
deleteSelectedEdges(network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

list of deleted edge SUIDs

**Author(s)**

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
deleteSelectedEdges()
```

---

`deleteSelectedNodes`     *Delete Selected Nodes*

---

**Description**

Delete currently selected nodes from the network.

**Usage**

```
deleteSelectedNodes(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A named list of deleted node suids (\$nodes) as well as edge suids (\$edges) deleted as a result of the node deletion

**Examples**

```
deleteSelectedNodes()
```

---

deleteSelfLoops	<i>Delete Self Loops</i>
-----------------	--------------------------

---

### Description

Removes edges that connect to a single node as both source and target.

### Usage

```
deleteSelfLoops(network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Details

Self loop edges are first selected and then deleted. Prior edge and node selections will be lost.

### Value

Lists of SUIDs for selected nodes and edges

### Examples

```
deleteSelfLoops()
```

---

deleteStyleMapping	<i>Delete Style Mapping</i>
--------------------	-----------------------------

---

### Description

Deletes a specified visual style mapping from specified style.

### Usage

```
deleteStyleMapping(style.name, visual.prop, base.url = .defaultBaseUrl)
```

### Arguments

style.name	(char) name for style
visual.prop	(char) name of visual property to map. See getVisualPropertyNames().
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
deleteStyleMapping()
```

<code>deleteTableColumn</code>	<i>Delete a table column</i>
--------------------------------	------------------------------

**Description**

Delete a column from node, edge or network tables.

**Usage**

```
deleteTableColumn(column, table = "node", namespace = "default",
                  network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>column</code>	Name of the column to delete
<code>table</code>	Name of table, e.g., node (default), edge, network
<code>namespace</code>	Namespace of table. Default is "default".
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A `data.frame` of column values

**Examples**

```
deleteTableColumn('node', 'group')
```

---

deleteVisualStyle	<i>Delete Visual Style</i>
-------------------	----------------------------

---

## Description

Deletes the specified visual style from current session.

## Usage

```
deleteVisualStyle(style.name, base.url = .defaultBaseUrl)
```

## Arguments

style.name	(char) name of style to delete
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
deleteVisualStyle("myStyle")
```

---

diffusionAdvanced	<i>Diffusion Advanced</i>
-------------------	---------------------------

---

## Description

Diffusion will send the selected network view and its selected nodes to a web-based REST service to calculate network propagation. Results are returned and represented by columns in the node table. Advanced operation supports parameters.

## Usage

```
diffusionAdvanced(heat.column.name = NULL, time = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

<code>heat.column.name</code>	(optional) A node column name intended to override the default table column 'diffusion_input'. This represents the query vector and corresponds to $h$ in the diffusion equation.
<code>time</code>	(optional) The extent of spread over the network. This corresponds to $t$ in the diffusion equation.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Columns are created for each execution of Diffusion and their names are returned in the response. The nodes you would like to use as input should be selected. This will be used to generate the contents of the diffusion\_input column, which represents the query vector and corresponds to  $h$  in the diffusion equation.

**Value**

Version number

**Examples**

```
diffusionAdvanced()
```

`diffusionBasic`

*Diffusion Basic*

**Description**

Diffusion will send the selected network view and its selected nodes to a web-based REST service to calculate network propagation. Results are returned and represented by columns in the node table.

**Usage**

```
diffusionBasic(base.url = .defaultBaseUrl)
```

**Arguments**

<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.
-----------------------	---

**Details**

Columns are created for each execution of Diffusion and their names are returned in the response. The nodes you would like to use as input should be selected. This will be used to generate the contents of the diffusion\_input column, which represents the query vector and corresponds to  $h$  in the diffusion equation.

**Value**

Version number

**Examples**

```
diffusionBasic()
```

---

disableApp

*Disable App*

---

**Description**

Disable an app to effectively remove it from your Cytoscape session without having to uninstall it.

**Usage**

```
disableApp(app, base.url = .defaultBaseUrl)
```

**Arguments**

app Name of app

base.url (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
disableApp()
```

---

dockPanel

*Dock Panel*

---

**Description**

Dock a panel back into the UI of Cytoscape.

**Usage**

```
dockPanel(panel.name, base.url = .defaultBaseUrl)
```

**Arguments**

<code>panel.name</code>	Name of the panel. Multiple ways of referencing panels is supported: WEST, control panel, control, c SOUTH, table panel, table, ta SOUTH_WEST, tool panel, tool, to EAST, results panel, results, r
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
dockPanel('table')
```

---

`enableApp`

*Enable App*

---

**Description**

Enable a previously installed and disabled app in Cytoscape.

**Usage**

```
enableApp(app, base.url = .defaultBaseUrl)
```

**Arguments**

<code>app</code>	Name of app
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
enableApp()
```

---

`expandGroup`*Expand Group*

---

### Description

Replaces the group node with member nodes for a set of groups.

### Usage

```
expandGroup(groups = NULL, network = NULL,  
           base.url = .defaultBaseUrl)
```

### Arguments

groups	(optional) List of group names or keywords: all, selected, unselected. Default is the currently selected group.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
expandGroup()
```

---

`exportFilters`*Export Filters*

---

### Description

Saves filters to file in JSON format.

### Usage

```
exportFilters(filename = "filters.json", base.url = .defaultBaseUrl)
```

### Arguments

filename	(char) Full path or path relative to current working directory, in addition to the name of the file. Default is "filters.json"
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

Unlike other export functions, Cytoscape will automatically overwrite files with the same name. You will not be prompted to confirm or reject overwrite. Use carefully!

## Value

Path to saved file

## Examples

```
exportFilters()
```

*exportImage*

*Export Image*

## Description

Saves the current network view as an image file.

## Usage

```
exportImage(filename = NULL, type = "PNG", resolution = NULL,
           units = NULL, height = NULL, width = NULL, zoom = NULL,
           network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

filename	(character) Full path or path relative to current working directory, in addition to the name of the file. Extension is automatically added based on the type argument. If blank, the current network name will be used.
type	(character) Type of image to export, e.g., JPEG, PDF, PNG (default), PostScript, SVG. All types are case sensitive.
resolution	(numeric) The resolution of the exported image, in DPI. Valid only for bitmap formats, when the selected width and height 'units' is inches. The possible values are: 72 (default), 100, 150, 300, 600.
units	(character) The units for the 'width' and 'height' values. Valid only for bitmap formats, such as PNG and JPEG. The possible values are: pixels (default), inches.
height	(numeric) The height of the exported image. Valid only for bitmap formats, such as PNG and JPEG.
width	(numeric) The width of the exported image. Valid only for bitmap formats, such as PNG and JPEG.
zoom	(numeric) The zoom value to proportionally scale the image. The default value is 100.0. Valid only for bitmap formats, such as PNG and JPEG
network	(optional) Name or SUID of a network or view. Default is the "current" network active in Cytoscape. The first (presumably only) view associated a network is used if a specific view SUID is not provided.

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

## Details

The image is cropped per the current view in Cytoscape. Consider applying [fitContent](#) prior to export.

## Value

server response

## Examples

```
exportImage('/fullpath/myNetwork', 'PDF')
```

---

exportNetwork

*Export Network*

---

## Description

Export a network to one of multiple file formats

## Usage

```
exportNetwork(filename = NULL, type = "SIF", network = NULL,  
base.url = .defaultBaseUrl)
```

## Arguments

filename	Full path or path relative to current working directory, in addition to the name of the file. Extension is automatically added based on the type argument. If blank, then the current network name is used.
type	File type. CX, CYJS, GraphML, NNF, SIF, XGMML (case sensitive). Default is SIF.
network	(optional) Name or SUID of a network or view. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None.

## Examples

```
exportNetwork('/path/filename', 'SIF')
```

---

```
exportNetworkToNDEx      Export Network To NDEx
```

---

## Description

Send a copy of a Cytoscape network to NDEx as a new submission.

## Usage

```
exportNetworkToNDEx(username, password, isPublic, network = NULL,  
                     metadata = NULL, base.url = .defaultBaseUrl)
```

## Arguments

username	NDEx account username
password	NDEx account password
isPublic	(Boolean) Whether to make the network publicly accessible at NDEx.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
metadata	(optional) A list of structured information describing the network
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

NDEx identifier (`externalId`) for new submission

## Examples

```
exportNetworkToNDEx("user", "pass", TRUE)
```

---

```
exportVisualStyles      Export Visual Styles
```

---

## Description

Save one or more visual styles to file.

## Usage

```
exportVisualStyles(filename = NULL, type = "XML", styles = NULL,  
                   base.url = .defaultBaseUrl)
```

**Arguments**

filename	(char) Full path or path relative to current working directory, in addition to the name of the file. Extension is automatically added based on the type argument. Default is "styles.xml"
type	(optional) Type of data file to export, e.g., XML, JSON (case sensitive). Default is XML. Note: Only XML can be read by importVisualStyles().
styles	(optional) The styles to be exported, listed as a comma-separated string. If no styles are specified, only the current one is exported.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Path to saved file

**See Also**

[importVisualStyles](#)

**Examples**

```
exportVisualStyles('/fullpath/myStyle')
exportVisualStyles('/fullpath/myStyle', type = 'JSON')
exportVisualStyles('/fullpath/myStyle', style = 'Minimal,default,Directed')
```

---

**fitContent***Fit Content*

---

**Description**

Zoom and pan network view to maximize either height or width of current network window.

**Usage**

```
fitContent(selected.only = FALSE, network = NULL,
           base.url = .defaultBaseUrl)
```

**Arguments**

selected.only	(Boolean) Whether to fit only current selection. Default is false, i.e., to fit the entire network.
network	(optional) Name or SUID of a network or view. Default is the "current" network active in Cytoscape. The first (presumably only) view associated a network is used if a specific view SUID is not provided.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Takes first (presumably only) view associated with provided network

**Value**

None

**Examples**

```
fitContent()
```

---

**floatPanel***Float Panel*

---

**Description**

Pop out a panel from the UI of Cytoscape. Other panels will expand into the space.

**Usage**

```
floatPanel(panel.name, base.url = .defaultBaseUrl)
```

**Arguments**

panel.name	Name of the panel. Multiple ways of referencing panels is supported: WEST, control panel, control, c SOUTH, table panel, table, ta SOUTH_WEST, tool panel, tool, to EAST, results panel, results, r
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
floatPanel('table')
```

---

`getAllEdges`*Get All Edges*

---

**Description**

Retrieve the names of all the edges in the network.

**Usage**

```
getAllEdges(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of node edges

**Examples**

```
getAllEdges()
```

---

`getAllNodes`*Get All Nodes*

---

**Description**

Retrieve the names of all the nodes in the network.

**Usage**

```
getAllNodes(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

```
list of node names
```

**Examples**

```
getAllNodes()
```

<code>getAppInformation</code>	<i>Get App Information</i>
--------------------------------	----------------------------

**Description**

Retrieve the name, brief description and version of a Cytoscape app.

**Usage**

```
getAppInformation(app, base.url = .defaultBaseUrl)
```

**Arguments**

<code>app</code>	Name of app
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

App name, brief description and version.

**Examples**

```
getAppInformation()
```

<code>getAppStatus</code>	<i>App Status</i>
---------------------------	-------------------

**Description**

Retrieve the current status of a Cytoscape app: Installed, Uninstalled or Disabled.

**Usage**

```
getAppStatus(app, base.url = .defaultBaseUrl)
```

**Arguments**

app	Name of app
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

App name and status

**Examples**

```
getAppStatus()
```

---

getAppUpdates

*List Apps With Updates*

---

**Description**

Retrieve list of currently installed Cytoscape apps with updates available.

**Usage**

```
getAppUpdates(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

A list of updatable app names, versions and statuses

**Examples**

```
getAppUpdates()
```

`getArrowShapes`*Get Arrow Shapes***Description**

Retrieve the names of the currently supported 'arrows' – the decorations can (optionally) appear at the ends of edges, adjacent to the nodes they connect, and conveying information about the nature of the nodes' relationship.

**Usage**

```
getArrowShapes(base.url = .defaultBaseUrl)
```

**Arguments**

<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.
-----------------------	---

**Value**

A list of character strings, e.g., 'DIAMOND', 'T', 'ARROW'

**Examples**

```
getArrowShapes()
```

`getAvailableApps`*List Available Apps***Description**

Retrieve a list of apps available for installation in Cytoscape.

**Usage**

```
getAvailableApps(base.url = .defaultBaseUrl)
```

**Arguments**

<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.
-----------------------	---

**Value**

A list of app names and latest versions

**Examples**

```
getAvailableApps()
```

---

```
getBackgroundColorDefault
```

*Get Background Color Default*

---

**Description**

Retrieve the default background color.

**Usage**

```
getBackgroundColorDefault(style.name = "default",  
    base.url = .defaultBaseUrl)
```

**Arguments**

style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
getBackgroundColorDefault()
```

---

```
getCollectionList
```

*Get Collection List*

---

**Description**

FUNCTION\_DESCRIPTION

**Usage**

```
getCollectionList(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

RETURN\_DESCRIPTION

**Examples**

```
getCollectionList()
```

getCollectionName	<i>Get Collection Name</i>
-------------------	----------------------------

**Description**

FUNCTION\_DESCRIPTION

**Usage**

```
getCollectionName(collection.suid = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

collection.suid	DESCRIPTION
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

RETURN\_DESCRIPTION

**Examples**

```
getCollectionName()
```

getCollectionNetworks	<i>Get Collection Networks</i>
-----------------------	--------------------------------

**Description**

FUNCTION\_DESCRIPTION

**Usage**

```
getCollectionNetworks(collection.suid = NULL,
                      base.url = .defaultBaseUrl)
```

**Arguments**

collection.suid	DESCRIPTION
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

RETURN\_DESCRIPTION

**Examples**

getCollectionNetworks()

---

getCollectionSuid      *Get Collection Suid*

---

**Description**

FUNCTION\_DESCRIPTION

**Usage**

getCollectionSuid(network = NULL, base.url = .defaultBaseUrl)

**Arguments**

network	DESCRIPTION
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

RETURN\_DESCRIPTION

**Examples**

getCollectionSuid()

---

getDisabledApps	<i>List Disabled Apps</i>
-----------------	---------------------------

---

### Description

Retrieve list of currently disabled apps in Cytoscape.

### Usage

```
getDisabledApps(base.url = .defaultBaseUrl)
```

### Arguments

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

### Value

A list of disabled app names, versions and statuses

### Examples

```
getDisabledApps()
```

---

getEdgeColor	<i>Get Edge Color</i>
--------------	-----------------------

---

### Description

Retrieve the actual line color of specified edges.

### Usage

```
getEdgeColor(edge.names = NULL, network = NULL,  
            base.url = .defaultBaseUrl)
```

### Arguments

edge.names	List of edge names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Property value

**Examples**

```
getEdgeColor()
```

---

getEdgeCount

*Get Edge Count*

---

**Description**

Reports the number of the edges in the network.

**Usage**

```
getEdgeCount(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

numeric

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getEdgeCount()
```

---

<code>getEdgeInfo</code>	<i>Get Edge Information</i>
--------------------------	-----------------------------

---

## Description

Returns source, target and edge table row values.

## Usage

```
getEdgeInfo(edges, network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>edges</code>	List of SUIDs or names of edges, i.e., values in the "name" column. Can also input a single edge.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This function is kinda slow. It takes approximately 70ms per edge to return a result, e.g., 850 edges will take a one minute.

## Value

named list of lists

## Author(s)

Alexander Pico

## Examples

```
getEdgeInfo()
```

---

**getEdgeLineStyle**      *Get Edge Line Style*

---

**Description**

Retrieve the actual line style of specified edges.

**Usage**

```
getEdgeLineStyle(edge.names = NULL, network = NULL,  
                base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Property value

**Examples**

```
getEdgeLineStyle()
```

---

**getEdgeLineWidth**      *Get Edge Line Width*

---

**Description**

Retrieve the actual line width of specified edges.

**Usage**

```
getEdgeLineWidth(edge.names = NULL, network = NULL,  
                 base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Property value

**Examples**

```
getEdgeLineWidth()
```

`getEdgeProperty`

*Get Edge Property Values*

**Description**

Get values for any edge property of the specified edges.

**Usage**

```
getEdgeProperty(edge.names, visual.property, network = NULL,
               base.url = .defaultBaseUrl)
```

**Arguments**

<code>edge.names</code>	List of edge names
<code>visual.property</code>	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method retrieves the actual property of the node, given the current visual style, factoring together any default, mapping and bypass setting.

**Value**

Property value

**Examples**

```
getEdgeProperty(c('node 0 (pp) node 1', 'node 0 (pp) node 2'), 'EDGE_WIDTH')
```

---

**getEdgeSelectionColorDefault**  
*Get Edge Selection Color Default*

---

**Description**

Retrieve the default selected edge color.

**Usage**

```
getEdgeSelectionColorDefault(style.name = "default",
                             base.url = .defaultBaseUrl)
```

**Arguments**

<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
getEdgeSelectionColorDefault()
```

---

**getEdgeTargetArrowShape**  
*Get Edge Target Arrow Shape*

---

**Description**

Retrieve the actual target arrow shape of specified edges.

**Usage**

```
getEdgeTargetArrowShape(edge.names = NULL, network = NULL,
                       base.url = .defaultBaseUrl)
```

**Arguments**

<code>edge.names</code>	List of edge names
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Property value

**Examples**

```
getEdgeTargetArrowShape()
```

---

<code>getFilterList</code>	<i>Get Filter List</i>
----------------------------	------------------------

---

**Description**

Retrieve list of named filters in current session.

**Usage**

```
getFilterList(base.url = .defaultBaseUrl)
```

**Arguments**

<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.
-----------------------	---

**Value**

List of filter names

**Examples**

```
getFilterList()
```

---

<code>getFirstNeighbors</code>	<i>Get list of nodes neighboring provided list</i>
--------------------------------	--

---

**Description**

Returns a non-redundant list of first neighbors of the supplied list of nodes or current node selection.

**Usage**

```
getFirstNeighbors(node.names = NULL, as.nested.list = FALSE,
                 network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

node.names	A list of node names from the name column of the node table. Default is currently selected nodes.
as.nested.list	logical Whether to return lists of neighbors per query node
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list of unique node names, optionally nested per query node name.

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**See Also**

selectNodes selectFirstNeighbors

**Examples**

```
getFirstNeighbors()
```

---

**getGroupInfo** *Get Group Information*

---

**Description**

Retrieve information about a group by name or identifier.

**Usage**

```
getGroupInfo(group, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

group	Group name or SUID.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Group information

## Examples

```
getGroupInfo('mygroup')
```

getInstalledApps	<i>List Installed Apps</i>
------------------	----------------------------

## Description

Retrieve list of currently installed apps in Cytoscape.

## Usage

```
getInstalledApps(base.url = .defaultBaseUrl)
```

## Arguments

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

## Value

A list of installed app names, versions and statuses

## Examples

```
getInstalledApps()
```

getLayoutNameMapping	<i>Get Layout Name Mapping</i>
----------------------	--------------------------------

## Description

The Cytoscape 'Layout' menu lists many layout algorithms, but the names presented there are different from the names by which these algorithms are known to layout method. This method returns a named list in which the names are from the GUI, and the values identify the names you must use to choose an algorithms in the programmatic interface.

## Usage

```
getLayoutNameMapping(base.url = .defaultBaseUrl)
```

## Arguments

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

A named list of character strings

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getLayoutNameMapping()  
# Degree Sorted Circle Layout      Group Attributes Layout      Edge-weighted Spring Embedded Layout  
#           "degree-circle"        "attributes-layout"       "kamada-kawai"
```

---

getLayoutNames

*Get Layout Names*

---

**Description**

Retrieve the names of the currently supported layout algorithms. These may be used in subsequent calls to the 'layoutNetwork' function.

**Usage**

```
getLayoutNames(base.url = .defaultBaseUrl)
```

**Arguments**

base.url (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list of character strings, e.g., "force-directed" "circular" "grid"

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getLayoutNames()  
# [1] "degree-circle"          "attributes-layout"      "kamada-kawai"  
# [4] "force-directed"         "cose"                  "hierarchical"  
# [7] "attribute-circle"        "stacked-node-layout"  "circular"
```

`getLayoutPropertyNames`*Get Layout Property Names***Description**

Returns a list of the tunable properties for the specified layout.

**Usage**

```
getLayoutPropertyNames(layout.name, base.url = .defaultBaseUrl)
```

**Arguments**

<code>layout.name</code>	(character) Name of the layout
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Run [getLayoutNames](#) to list available layouts.

**Value**

A list of character strings

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getLayoutPropertyNames('force-directed')
# [1] "numIterations"           "defaultSpringCoefficient" "defaultSpringLength"
# [4] "defaultNodeMass"          "isDeterministic"        "singlePartition"
```

`getLayoutPropertyType` *Get Layout Property Type***Description**

Returns the type of one of the tunable properties (`property.name`) for the specified layout.

**Usage**

```
getLayoutPropertyType(layout.name, property.name,
base.url = .defaultBaseUrl)
```

**Arguments**

- layout.name (character) Name of the layout  
property.name (character) Name of the property  
base.url (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Run [getLayoutNames](#) to list available layouts. Run [getLayoutPropertyNames](#) to list properties per layout.

**Value**

A character string specifying the type

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getLayoutPropertyType('force-directed','defaultSpringLength')
# "double"
```

---

**getLayoutPropertyValue**

*Get Layout Property Value*

---

**Description**

Returns the appropriately typed value of the specified tunable property for the specified layout.

**Usage**

```
getLayoutPropertyValue(layout.name, property.name,
                      base.url = .defaultBaseUrl)
```

**Arguments**

- layout.name (character) Name of the layout  
property.name (character) Name of the property  
base.url (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Run [getLayoutNames](#) to list available layouts. Run [getLayoutPropertyNames](#) to list properties per layout.

**Value**

The current value set for this layout property. Typically an integer, numeric or character string value.

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getLayoutPropertyValue('force-directed','defaultSpringLength')
# 80
```

---

**getLineStyles**

*Get Line Styles*

---

**Description**

Retrieve the names of the currently supported line types – values which can be used to render edges, and thus can be used in calls to 'setEdgeLineStyleRule'.

**Usage**

```
getLineStyles(base.url = .defaultBaseUrl)
```

**Arguments**

<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.
-----------------------	---

**Value**

A list of character strings, e.g., 'SOLID', 'DOT'

**Examples**

```
getLineStyles()
```

---

```
getNetworkCenter      Get Network Center
```

---

## Description

Retrieve the center of specified network.

## Usage

```
getNetworkCenter(network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

Property value

## Examples

```
getNetworkCenter()
```

---

```
getNetworkCount      Get the number of Cytoscape networks
```

---

## Description

Returns the number of Cytoscape networks in the current Cytoscape session

## Usage

```
getNetworkCount(base.url = .defaultBaseUrl)
```

## Arguments

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

## Value

numeric

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
## Not run:
getNetworkCount()
# 3

## End(Not run)
```

**getNetworkList**

*Get the list of Cytoscape networks*

**Description**

Returns the list of Cytoscape network names in the current Cytoscape session

**Usage**

```
getNetworkList(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

list

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
## Not run:
getNetworkList()
# 3

## End(Not run)
```

---

getNetworkName	<i>Get the name of a network</i>
----------------	----------------------------------

---

### Description

Retrieve the title of a network

### Usage

```
getNetworkName(suid = NULL, base.url = .defaultBaseUrl)
```

### Arguments

suid	SUID of the network; default is current network. If a name is provided, then it is validated and returned.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

network name

### Examples

```
getNetworkName()  
getNetworkName(1111)
```

---

getNetworkNDExId	<i>Get Network NDEx Id</i>
------------------	----------------------------

---

### Description

Retrieve the NDEx externalId for a Cytoscape network, presuming it has already been exported to NDEx.

### Usage

```
getNetworkNDExId(network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

If the Cytoscape network is not associated with an NDEx network, the return value will be NULL.

**Value**

NDEx identifier (`externalId`) or NULL

**Examples**

```
getNetworkNDExId()
```

---

<code>getNetworkProperty</code>	<i>Get Network Property Values</i>
---------------------------------	------------------------------------

---

**Description**

Get values for any network property.

**Usage**

```
getNetworkProperty(visual.property, network = NULL,
  base.url = .defaultBaseUrl)
```

**Arguments**

<code>visual.property</code>	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method retrieves the actual property of the node, given the current visual style, factoring together any default, mapping and bypass setting.

**Value**

Property value

**Examples**

```
getNetworkProperty('NETWORK_SCALE_FACTOR')
```

---

getNetworkSuid	<i>Get the SUID of a network</i>
----------------	----------------------------------

---

## Description

Retrieve the SUID of a network

## Usage

```
getNetworkSuid(title = NULL, base.url = .defaultBaseUrl)
```

## Arguments

title	Name of the network; default is "current" network. If an SUID is provided, then it is validated and returned.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

(numeric) Network uid

## Author(s)

Alexander Pico

## Examples

```
getNetworkSuid()  
getNetworkSuid("myNetwork")  
# 80
```

---

getNetworkViews	<i>Get Network Views</i>
-----------------	--------------------------

---

## Description

Retrieve list of network view SUIDs

## Usage

```
getNetworkViews(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

- `network` (optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
- `base.url` (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is `http://localhost:1234` and the latest version of the CyREST API supported by this version of RCy3.

**Value**

List of network view SUIDs

**Examples**

```
getNetworkViews()
```

<code>getNetworkViewSuid</code>	<i>Get the SUID of a network view</i>
---------------------------------	---------------------------------------

**Description**

Retrieve the SUID of a network view

**Usage**

```
getNetworkViewSuid(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

- `network` (optional) Name or SUID of the network. Default is the "current" network active in Cytoscape. If a network view SUID is provided, then it is validated and returned.
- `base.url` (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is `http://localhost:1234` and the latest version of the CyREST API supported by this version of RCy3.

**Value**

(numeric) Network view uid. The first (presumably only) view associated a network is returned.

**Author(s)**

Alexander Pico

**Examples**

```
getNetworkViewSuid()
getNetworkViewSuid("myNetwork")
# 90
```

---

getNetworkZoom	<i>Get Network Zoom</i>
----------------	-------------------------

---

## Description

Retrieve the scale factor of specified network.

## Usage

```
getNetworkZoom(network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

Property value

## Examples

```
getNetworkZoom()
```

---

getNodeColor	<i>Get Node Color</i>
--------------	-----------------------

---

## Description

Retrieve the actual fill color of specified nodes.

## Usage

```
getNodeColor(node.names = NULL, network = NULL,  
            base.url = .defaultBaseUrl)
```

## Arguments

node.names	List of node names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Property value

**Examples**

```
getNodeColor()
```

---

`getNodeCount`

*Get Node Count*

---

**Description**

Reports the number of nodes in the network.

**Usage**

```
getNodeCount(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

numeric

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getNodeCount()
```

---

**getNodeHeight***Get Node Height*

---

## Description

Retrieve the actual height of specified nodes.

## Usage

```
getNodeHeight(node.names = NULL, network = NULL,  
             base.url = .defaultBaseUrl)
```

## Arguments

node.names	List of node names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

Property value

## Examples

```
getNodeHeight()
```

---

**getNodeProperty***Get Node Property Values*

---

## Description

Get values for any node property of the specified nodes.

## Usage

```
getNodeProperty(node.names, visual.property, network = NULL,  
                base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	List of node names
<code>visual.property</code>	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method retrieves the actual property of the node, given the current visual style, factoring together any default, mapping and bypass setting.

**Value**

Property value

**Examples**

```
getNodeProperty(c('node 0','node 1'), 'NODE_SHAPE')
```

---

`getNodeSelectionColorDefault`  
*Get Node Selection Color Default*

---

**Description**

Retrieve the default selection node color.

**Usage**

```
getNodeSelectionColorDefault(style.name = "default",
  base.url = .defaultBaseUrl)
```

**Arguments**

<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
getNodeSelectionColorDefault()
```

---

**getNodeShapes***Get Node Shapes*

---

**Description**

Retrieve the names of the currently supported node shapes, which can then be used in calls to setNodeShapeRule and setDefaultVizMapValue.

**Usage**

```
getNodeShapes(base.url = .defaultBaseUrl)
```

**Arguments**

`base.url` (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is `http://localhost:1234` and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list of character strings, e.g. 'ELLIPSE', 'RECTANGLE'

**Examples**

```
getNodeShapes()
```

---

**getNodeSize***Get Node Size*

---

**Description**

Retrieve the actual size of specified nodes.

**Usage**

```
getNodeSize(node.names = NULL, network = NULL,  
           base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	List of node names
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Property value

**Examples**

```
getNodeSize()
```

---

`getNodeWidth`

*Get Node Width*

---

**Description**

Retrieve the actual width of specified nodes.

**Usage**

```
getNodeWidth(node.names = NULL, network = NULL,
            base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	List of node names
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Property value

**Examples**

```
getNodeWidth()
```

---

**getSelectedEdgeCount** *Get Selected Edge Count*

---

**Description**

Returns the number of edges currently selected in the network.

**Usage**

```
getSelectedEdgeCount(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

numeric

**Author(s)**

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getSelectedEdgeCount()
```

---

**getSelectedEdges** *Get Selected Edges*

---

**Description**

Retrieve the names of all the edges selected in the network.

**Usage**

```
getSelectedEdges(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of selected edge names

**Examples**

```
getSelectedEdges()
```

---

`getSelectedNodeCount`    *Get Selected Node Count*

---

**Description**

Returns the number of nodes currently selected in the network.

**Usage**

```
getSelectedNodeCount(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

numeric

**Author(s)**

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getSelectedNodeCount()
```

---

**getSelectedNodes** *Get Selected Nodes*

---

**Description**

Retrieve the names of all the nodes selected in the network.

**Usage**

```
getSelectedNodes(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of selected node names

**Author(s)**

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
getSelectedNodes()
```

---

**getStyleDependencies** *Get the values of dependencies in a style*

---

**Description**

Retrieves style dependency settings.

**Usage**

```
getStyleDependencies(style.name = "default",
base.url = .defaultBaseUrl)
```

**Arguments**

style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

server response

**Available Dependencies**

arrowColorMatchesEdge nodeCustomGraphicsSizeSync nodeSizeLocked

**Examples**

```
getStyleDependencies("myStyle")
```

---

`getTableColumnNames`      *Get Table Column Names*

---

**Description**

Retrieve the names of all columns in a table

**Usage**

```
getTableColumnNames(table = "node", namespace = "default",
                    network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table	name of table, e.g., node, edge, network; default is "node"
namespace	namespace of table, e.g., default
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of column names

**Examples**

```
getTableColumnNames()
getTableColumnNames('edge')
getTableColumnNames('network')
```

---

getTableColumns	<i>Get table column values</i>
-----------------	--------------------------------

---

## Description

Retrieve one or more columns of data from node, edge or network tables.

## Usage

```
getTableColumns(table = "node", columns = NULL,  
               namespace = "default", network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

table	name of table, e.g., node (default), edge, network
columns	names of columns to retrieve values from as list object or comma-separated list; default is all columns
namespace	namespace of table; default is "default"
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

The 'SUID' column is always retrieved along with specified columns. The 'SUID' values are used as `row.names` in the returned `data.frame`.

## Value

A `data.frame` of column values

## Examples

```
getTableColumns()  
getTableColumns('node', 'group')
```

`getTableColumnTypes`     *Get Table Column Types*

## Description

Retrieve the types of all columns in a table

## Usage

```
getTableColumnTypes(table = "node", namespace = "default",
                   network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>table</code>	name of table, e.g., node, edge, network; default is "node"
<code>namespace</code>	namespace of table, e.g., default
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

a named list of column types

## Examples

```
getTableColumnTypes()
getTableColumnTypes('edge')
getTableColumnTypes('network')
```

`getTableValue`     *Get table cell value*

## Description

Retrieve the value from a specific row and column from node, edge or network tables.

## Usage

```
getTableValue(table, row.name, column, namespace = "default",
              network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table	name of table, e.g., node, edge, network
row.name	Node, edge or network name, i.e., the value in the "name" column
column	name of column to retrieve values from
namespace	namespace of table; default is "default"
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A `data.frame` of column values

**Examples**

```
getTableValue('node', 'node_1', 'score')
```

---

```
getUninstalledApps      List Uninstalled Apps
```

---

**Description**

Retrieve list of apps not currently installed in Cytoscape.

**Usage**

```
getUninstalledApps(base.url = .defaultBaseUrl)
```

**Arguments**

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

A list of uninstalled app names, versions and statuses

**Examples**

```
getUninstalledApps()
```

---

```
getVisualPropertyDefault
```

*Get Visual Property Default*

---

## Description

Retrieve the default value for a visual property.

## Usage

```
getVisualPropertyDefault(property, style.name = "default",
                         base.url = .defaultBaseUrl)
```

## Arguments

property	Name of property, e.g., NODE_FILL_COLOR (see <a href="#">getVisualPropertyNames</a> )
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
getVisualPropertyDefault('NODE_SIZE')
```

---

```
getVisualPropertyNames
```

*Get Visual Property Names*

---

## Description

Retrieve the names of all possible visual properties.

## Usage

```
getVisualPropertyNames(base.url = .defaultBaseUrl)
```

## Arguments

base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
----------	--

**Value**

List of names

**Examples**

```
getVisualStyleNames()
```

---

getVisualStyleNames     *Get Visual Style Names*

---

**Description**

Retrieve a list of all visual style names.

**Usage**

```
getStyleNames(base.url = .defaultBaseUrl)
```

**Arguments**

`base.url`     (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is `http://localhost:1234` and the latest version of the CyREST API supported by this version of RCy3.

**Value**

A list of names

**Examples**

```
getStyleNames()
```

---

hideAllPanels     *Hide All Panels*

---

**Description**

Hide control, table, tool and results panels.

**Usage**

```
hideAllPanels(base.url = .defaultBaseUrl)
```

**Arguments**

`base.url`     (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is `http://localhost:1234` and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
hideAllPanels()
```

---

hideEdges

*Hide Edges*

---

**Description**

Hide (but do not delete) the specified edge or edges, by setting the Visible property bypass value to false.

**Usage**

```
hideEdges(edge.names, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>edge.names</code>	List of edge names
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [unhideEdges](#) or [unhideAll](#).

**Value**

None

**See Also**

[setEdgePropertyBypass](#), [hideSelectedEdges](#), [unhideEdges](#), [unhideAll](#)

**Examples**

```
hideEdges()
```

---

**hideNodes***Hide Nodes*

---

**Description**

Hide (but do not delete) the specified node or nodes, by setting the `Visible` property bypass value to false.

**Usage**

```
hideNodes(node.names, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	List of node names
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [unhideNodes](#) or [unhideAll](#).

**Value**

None

**See Also**

[setNodePropertyBypass](#), [hideSelectedNodes](#), [unhideNodes](#), [unhideAll](#)

**Examples**

```
hideNodes()
```

`hidePanel`*Hide Panel***Description**

Hide a panel in the UI of Cytoscape. Other panels will expand into the space.

**Usage**

```
hidePanel(panel.name, base.url = .defaultBaseUrl)
```

**Arguments**

<code>panel.name</code>	Name of the panel. Multiple ways of referencing panels is supported: WEST, control panel, control, c SOUTH, table panel, table, ta SOUTH_WEST, tool panel, tool, to EAST, results panel, results, r
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
hidePanel('table')
```

`hideSelectedEdges`*Hide Selected Edges***Description**

Hide (but do not delete) the currently selected edges, by setting the `Visible` property bypass value to false.

**Usage**

```
hideSelectedEdges(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [unhideEdges](#) or [unhideAll](#).

**Value**

None

**See Also**

[setEdgePropertyBypass](#), [hideEdges](#), [unhideEdges](#), [unhideAll](#)

**Examples**

```
hideSelectedEdges()
```

---

hideSelectedNodes

*Hide Selected Nodes*

---

**Description**

Hide (but do not delete) the currently selected nodes, by setting the Visible property bypass value to false.

**Usage**

```
hideSelectedNodes(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [unhideNodes](#) or [unhideAll](#).

**Value**

None

**See Also**

[setNodePropertyBypass](#), [hideNodes](#), [unhideNodes](#), [unhideAll](#)

**Examples**

```
hideSelectedNodes()
```

---

**importFilters***Import Filters*

---

**Description**

Loads filters from a file in JSON format.

**Usage**

```
importFilters(filename, base.url = .defaultBaseUrl)
```

**Arguments**

filename	(char) Path and name of the filters file to load.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Path to saved file

**Examples**

```
importFilters()
```

---

**importNetworkFromFile** *Import Network From File*

---

**Description**

Loads a network from specified file

**Usage**

```
importNetworkFromFile(file = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

file	Name of file in any of the supported formats (e.g., SIF, GML, XGMML, etc). If NULL, a demo network file in SIF format is loaded.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

(int) network SUID

**Examples**

```
importNetworkFromFile()
```

---

```
importNetworkFromNDEx  Import Network From NDEx
```

---

**Description**

Import a network from the NDEx database into Cytoscape.

**Usage**

```
importNetworkFromNDEx(ndex.id, username = NULL, password = NULL,  
accessKey = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

ndex.id	Network externalId provided by NDEx. This is not the same as a Cytoscape SUID.
username	(optional) NDEx account username; required for private content
password	(optional) NDEx account password; required for private content
accessKey	(optional) NDEx accessKey; alternate access to private content
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

(integer) SUID of imported network

**Examples**

```
importNetworkFromNDEx(ndex.id)
```

---

```
importVisualStyles      Import Visual Styles
```

---

## Description

Loads styles from an XML file and returns the names of the loaded styles.

## Usage

```
importVisualStyles(filename = "styles.xml", base.url = .defaultBaseUrl)
```

## Arguments

filename	(char) Name of the style file to load. Only reads XML files. Default is "styles.xml".
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

(list) Names of styles loaded

## See Also

[exportVisualStyles](#)

## Examples

```
importVisualStyles()
```

---

```
installApp      Install App
```

---

## Description

Installs an app in Cytoscape.

## Usage

```
installApp(app, base.url = .defaultBaseUrl)
```

## Arguments

app	Name of app
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
installApp()
```

---

invertEdgeSelection     *Invert Edge Selection*

---

**Description**

Select all edges that were not selected and deselect all edges that were selected.

**Usage**

```
invertEdgeSelection(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network     (optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.

base.url     (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of newly selected edge SUIDs

**Author(s)**

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
invertEdgeSelection()
```

---

invertNodeSelection     *Invert Node Selection*

---

### Description

Select all nodes that were not selected and deselect all nodes that were selected.

### Usage

```
invertNodeSelection(network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

list of newly selected node SUIDs

### Author(s)

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

### Examples

```
invertNodeSelection()
```

---

layoutCopycat     *Copy a layout from one network to another*

---

### Description

Sets the coordinates for each node in the target network to the coordinates of a matching node in the source network.

### Usage

```
layoutCopycat(sourceNetwork, targetNetwork, sourceColumn = "name",
               targetColumn = "name", gridUnmapped = TRUE, selectUnmapped = TRUE,
               base.url = .defaultBaseUrl)
```

**Arguments**

sourceNetwork	(character) The name of network to get node coordinates from
targetNetwork	(character) The name of the network to apply coordinates to
sourceColumn	(optional character) The name of column in the sourceNetwork node table used to match nodes; default is 'name'
targetColumn	(optional character) The name of column in the targetNetwork node table used to match nodes; default is 'name'
gridUnmapped	(optional character) If this is set to true, any nodes in the target network that could not be matched to a node in the source network will be laid out in a grid; default is TRUE
selectUnmapped	optional character) If this is set to true, any nodes in the target network that could not be matched to a node in the source network will be selected in the target network; default is TRUE
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Optional parameters such as `gridUnmapped` and `selectUnmapped` determine the behavior of target network nodes that could not be matched.

**Value**

None

**Examples**

```
layoutCopycat('network1','network2')
```

---

layoutNetwork	<i>Apply a layout to a network</i>
---------------	------------------------------------

---

**Description**

Apply a layout to a network

**Usage**

```
layoutNetwork(layout.name = NULL, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

<code>layout.name</code>	(character) Name of the layout (with optional parameters). If not specified, then the preferred layout set in the Cytoscape UI is applied.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Run [getLayoutNames](#) to list available layouts.

**Value**

None

**Examples**

```
layoutNetwork()
layoutNetwork('force-directed')
layoutNetwork('force-directed defaultSpringCoefficient=.00006 defaultSpringLength=80')
```

**listGroups***List Groups***Description**

Retrieve a list of all group SUIDs in a network.

**Usage**

```
listGroups(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

List of group SUIDs

**Examples**

```
listGroups()
```

---

loadTableData	<i>Loads data into Cytoscape tables keyed by row</i>
---------------	--

---

## Description

This function loads data into Cytoscape node/edge/network tables provided a common key, e.g., name. Data.frame column names will be used to set Cytoscape table column names.

## Usage

```
loadTableData(data, data.key.column = "row.names", table = "node",
  table.key.column = "name", namespace = "default", network = NULL,
  base.url = .defaultBaseUrl)
```

## Arguments

data	(data.frame) each row is a node and columns contain node attributes
data.key.column	(char) name of data.frame column to use as key; default is "row.names"
table	(char) name of Cytoscape table to load data into, e.g., node, edge or network; default is "node"
table.key.column	(char) name of Cytoscape table column to use as key; default is "name"
namespace	namespace of table, e.g., default
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

Numeric values will be stored as Doubles in Cytoscape tables. Integer values will be stored as Integers. Character or mixed values will be stored as Strings. Logical values will be stored as Boolean. Lists are not supported by the current version of CyREST. Existing columns with the same names will keep original type but values will be overwritten.

## Value

server response

---

lockNodeDimensions      *Lock Node Dimensions*

---

**Description**

Set a boolean value to have node width and height fixed to a single size value.

**Usage**

```
lockNodeDimensions(new.state, style.name = "default",
base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.state</code>	(Boolean) Whether to lock node width and height
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
lockNodeDimensions(TRUE)
```

---

makeSimpleGraph      *Make Simple Graph*

---

**Description**

This function creates a simple graphNEL object with various node and edge attribute types to help demonstrate round trip conversion with Cytoscape networks via RCy3.

**Usage**

```
makeSimpleGraph()
```

**Value**

A graphNEL object with a few nodes, edges and attributes

**See Also**

[createNetworkFromGraph](#), [createGraphFromNetwork](#), [makeSimpleIgraph](#)

**Examples**

```
{  
  makeSimpleGraph()  
}
```

---

makeSimpleIgraph	<i>Make Simple Igraph</i>
------------------	---------------------------

---

**Description**

This function creates a simple iGraph object with various node and edge attribute types to help demonstrate round trip conversion with Cytoscape networks via RCy3.

**Usage**

```
makeSimpleIgraph()
```

**Value**

A igraph object with a few nodes, edges and attributes

**See Also**

[createNetworkFromIgraph](#), [createIgraphFromNetwork](#), [makeSimpleGraph](#)

**Examples**

```
{  
  makeSimpleIgraph()  
}
```

---

mapTableColumn	<i>Map Table Column</i>
----------------	-------------------------

---

**Description**

Perform identifier mapping using an existing column of supported identifiers to populate a new column with identifiers mapped to the originals.

**Usage**

```
mapTableColumn(column, species, map.from, map.to, force.single = TRUE,  
  table = "node", namespace = "default", network = NULL,  
  base.url = .defaultBaseUrl)
```

### Arguments

<code>column</code>	Name of column containing identifiers of type specified by <code>map.from</code> .
<code>species</code>	Common name for species associated with identifiers, e.g., Human. See details.
<code>map.from</code>	Type of identifier found in specified <code>column</code> . See details.
<code>map.to</code>	Type of identifier to populate in new column. See details.
<code>force.single</code>	(optional) Whether to return only first result in cases of one-to-many mappings; otherwise the new column will hold lists of identifiers. Default is TRUE.
<code>table</code>	(optional) Name of table, e.g., node (default), edge or network
<code>namespace</code>	(optional) Namespace of table, e.g., default (default), shared or hidden
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Details

Supported species: Human, Mouse, Rat, Frog, Zebrafish, Fruit fly, Mosquito, Worm, Arabidopsis thaliana, Yeast, E. coli, Tuberculosis.

Supported identifier types (depending on species): Ensembl, Entrez Gene, Uniprot-TrEMBL, miR-Base, UniGene, HGNC (symbols), MGI, RGD, SGD, ZFIN, FlyBase, WormBase, TAIR.

### Value

dataframe with `map.from` and `map.to` columns. Beware: if `map.to` is not unique, it will be suffixed with an incrementing number in parentheses, e.g., if `mapIdentifiers` is repeated on the same network. However, the original `map.to` column will be returned regardless.

### Examples

```
mapped.cols <- mapTableColumn('name', 'Yeast', 'Ensembl', 'SGD')
#           name      SGD
#17920  YER145C S000000947
#17921  YMR058W S000004662
#17922  YJL190C S000003726
#...
```

`mapVisualProperty`      *Creates a mapping between an attribute and a visual property*

### Description

Generates the appropriate data structure for the "mapping" parameter in `setStyleMappings` and `createStyle`.

**Usage**

```
mapVisualProperty(visual.prop, table.column, mapping.type,
    table.column.values, visual.prop.values, network = NULL,
    base.url = .defaultBaseUrl)
```

**Arguments**

<code>visual.prop</code>	(char) name of visual property to map
<code>table.column</code>	(char) name of table column to map
<code>mapping.type</code>	(char) continuous, discrete or passthrough (c,d,p)
<code>table.column.values</code>	(list) list of values paired with <code>visual.prop.values</code> ; skip for passthrough mapping
<code>visual.prop.values</code>	(list) list of values paired with <code>table.column.values</code> ; skip for passthrough mapping
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Details**

The paired list of values must be of the same length or mapping will fail. For gradient mapping, you may include two additional `visual.prop.values` in the first and last positions to map respectively to values less than and greater than those specified in `table.column.values`. Mapping will also fail if the data type of `table.column.values` does not match that of the existing `table.column`. Note that all imported numeric data are stored as Integers or Doubles in Cytoscape tables; and character or mixed data are stored as Strings.

**Value**

(`network=network, base.url=base.url`) ready to convert into JSON by style mapping operations

**List of visual properties**

Node Border Stroke	Edge Bend	Network Background Paint
Node Border Paint	Edge Curved	Network Center X Location
Node Border Transparency	Edge Label	Network Center Y Location
Node Border Width	Edge Label Color	Network Center Z Location
Node CustomGraphics 1-9	Edge Label Font Face	Network Depth
Node CustomGraphics Position 1-9	Edge Label Font Size	Network Edge Selection
Node CustomGraphics Size 1-9	Edge Label Transparency	Network Height
Node CustomPaint 1-9	Edge Label Width	Network Node Selection
Node Depth	Edge Line Type	Network Scale Factor
Node Fill Color	Edge Paint	Network Size
Node Height	Edge Selected	Network Title
Node Label	Edge Selected Paint	Network Width
Node Label Color	Edge Source Arrow Selected Paint	
Node Label Font Face	Edge Source Arrow Shape	
Node Label Font Size	Edge Source Arrow Size	

Node Label Position	Edge Source Arrow Unselected Paint
Node Label Transparency	Edge Stroke Selected Paint
Node Label Width	Edge Stroke Unselected Paint
Node Network Image Visible	Edge Target Arrow Selected Paint
Node Paint	Edge Target Arrow Shape
Node Selected	Edge Target Arrow Size
Node Selected Paint	Edge Target Arrow Unselected Paint
Node Shape	Edge Tooltip
Node Size	Edge Transparency
Node Tooltip	Edge Unselected Paint
Node Transparency	Edge Visible
Node Visible	Edge Visual Property
Node Width	Edge Width
Node X Location	
Node Y Location	
Node Z Location	

## See Also

`setStyleMappings` `createStyle` `getVisualPropertyNames`

## Examples

```
mapVisualProperty('node fill color', 'score', 'c', c(-4.0, 0.0, 9.0), c('#99CCFF', '#FFFFFF', '#FF7777'))
mapVisualProperty('node shape', 'type', 'd', c('protein', 'metabolite'), c('ellipse', 'rectangle'))
mapVisualProperty('node label', 'alias', 'p')
```

**matchArrowColorToEdge** *Match Arrow Color To Edge*

## Description

Set a boolean value to have arrow shapes share the same color as the edge.

## Usage

```
matchArrowColorToEdge(new.state, style.name = "default",
base.url = .defaultBaseUrl)
```

## Arguments

<code>new.state</code>	(Boolean) Whether to match arrow color to edge.
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
matchArrowColorToEdge(TRUE)
```

---

openAppStore

*Open App Store Page*

---

**Description**

Opens the Cytoscape App Store in a new tab in your default browser.

**Usage**

```
openAppStore(app, base.url = .defaultBaseUrl)
```

**Arguments**

app	Name of app
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
openAppStore()
```

---

openSession

*Open Session File or URL*

---

**Description**

Open a session file or URL. This will clear all networks, tables and styles associated with current session. Be sure to [saveSession](#) first.

**Usage**

```
openSession(file.location = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

- `file.location` File path or URL (with 'http' or 'https' prefix). Default is a sample session file.  
`base.url` (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

`saveSession`

**Examples**

```
openSession('/fullpath/mySession.CYS')
```

RCy3

*RCy3: Functions to Access and Control Cytoscape*

**Description**

Vizualize, analyze and explore networks using Cytoscape via R.

**Details**

To learn more about RCy3, start with the vignettes: `browseVignettes("RCy3")`

RemoveFromGroup

*Remove from Group*

**Description**

Removes the specified nodes and edges from the specified group.

**Usage**

```
RemoveFromGroup(group.name, nodes = NULL, nodes.by.col = "SUID",
edges = NULL, edges.by.col = "SUID", network = NULL,
base.url = .defaultBaseUrl)
```

**Arguments**

<code>group.name</code>	Specifies the name used to identify the group
<code>nodes</code>	List of node SUIDs, names, other column values, or keyword: selected, unselected or all. Default is currently selected nodes.
<code>nodes.by.col</code>	name of node table column corresponding to provided nodes list. Default is 'SUID'.
<code>edges</code>	List of edge SUIDs, names, other column values, or keyword: selected, unselected or all. Default is currently selected edges.
<code>edges.by.col</code>	name of edge table column corresponding to provided edges list. Default is 'SUID'.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

---

```
RemoveFromGroup()
```

---

---

```
removeNodeCustomGraphics
```

*Remove Node Custom Graphics*

---

**Description**

Remove the default custom charts, images and gradients.

**Usage**

```
removeNodeCustomGraphics(slot = 1, style.name = "default",
                        base.url = .defaultBaseUrl)
```

**Arguments**

<code>slot</code>	(optional) Which custom graphics slot to modify. Slots 1-9 are available for independent charts, gradients and images. Default is 1.
<code>style.name</code>	(optional) Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
removeNodeCustomGraphics()
```

---

renameNetwork

*Rename a network*

---

**Description**

Sets a new name for this network

**Usage**

```
renameNetwork(title, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

title	New name for the network
network	name or uid of the network that you want to rename; default is "current" network
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Duplicate network names are not allowed

**Value**

None

**Author(s)**

Alexander Pico, Julia Gustavsen

**Examples**

```
## Not run:  
renameNetwork("renamed network")  
  
## End(Not run)
```

---

renameTableColumn	<i>Rename Table Column</i>
-------------------	----------------------------

---

## Description

Sets a new name for a column.

## Usage

```
renameTableColumn(column, new.name, table = "node",
                  namespace = "default", network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

column	Name of the column to rename
new.name	New name for the specified column
table	(optional) Name of table, e.g., node (default), edge or network
namespace	(optional) Namespace of table, e.g., default (default), shared or hidden
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
renameTableColumn('exp','log2FC')
```

---

saveSession	<i>Save Session to File</i>
-------------	-----------------------------

---

## Description

Saves the current Cytoscape session as a CYS file.

## Usage

```
saveSession(filename = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

filename	Full path or path relative to current working directory, in addition to the name of the file. The .cys extension is automatically added.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

If no filename is provided, then it attempts to save to an existing CYS file associated with the session. If filename already exists, then it is overwritten.

Unlike most export functions in RCy3, Cytoscape will automatically overwrite CYS session files with the same name. You will not be prompted to confirm or reject overwrite. Use carefully!

**Value**

server response

**Examples**

```
saveSession('/fullpath/mySession')
saveSession()
```

selectAllEdges

*Select all edges*

**Description**

Selects all edges in a Cytoscape Network

**Usage**

```
selectAllEdges(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Selects all edges in a specified network.

**Author(s)**

Alexander Pico, Julia Gustavsen

## Examples

```
## Not run:  
cw <- CytoscapeWindow('new.demo', new('graphNEL'))  
selectAllEdges(cw)  
  
## End(Not run)
```

---

selectAllNodes	<i>Select all nodes</i>
----------------	-------------------------

---

## Description

Selects all nodes in a Cytoscape Network

## Usage

```
selectAllNodes(network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

network	name or uid of the network into which you want to select; default is "current" network
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

Selects all nodes in a specified network.

## Author(s)

Alexander Pico, Julia Gustavsen

## See Also

[selectNodes](#)

## Examples

```
selectAllNodes()
```

`selectEdges`*Select Edges***Description**

Select edges in the network by SUID, name or other column values.

**Usage**

```
selectEdges(edges, by.col = "SUID", preserve.current.selection = TRUE,
           network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>edges</code>	List of edge SUIDs, names or other column values
<code>by.col</code>	Edge table column to lookup up provide edge values. Default is 'SUID'.
<code>preserve.current.selection</code>	boolean Whether to maintain previously selected edges.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of newly selected edge SUIDs

**Author(s)**

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
selectEdges()
```

`selectEdgesAdjacentToSelectedNodes`*Select Edges Adjacent To Selected Nodes***Description**

Takes currently selected nodes and adds to the selection all edges connected to those nodes, regardless of directionality.

**Usage**

```
selectEdgesAdjacentToSelectedNodes(network = NULL,  
                                    base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Lists of SUIDs for selected nodes and edges

**Examples**

```
selectEdgesAdjacentToSelectedNodes()
```

---

```
selectEdgesConnectingSelectedNodes
```

*Select the edges connecting selected nodes in Cytoscape Network*

---

**Description**

Selects edges in a Cytoscape Network connecting the selected nodes, including self loops connecting single nodes.

**Usage**

```
selectEdgesConnectingSelectedNodes(network = NULL,  
                                    base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Lists of SUIDs for selected nodes and edges

**Author(s)**

Alexander Pico, Julia Gustavsen

**Examples**

```
## Not run:
selectEdgesConnectingSelectedNodes()

## End(Not run)
```

**selectFirstNeighbors** *Select first neighbor nodes*

**Description**

Select nodes directly connected to currently selected nodes. Can specify connection directionality using the direction param.

**Usage**

```
selectFirstNeighbors(direction = "any", network = NULL,
base.url = .defaultBaseUrl)
```

**Arguments**

direction	direction of connections to neighbors to follow, e.g., incoming, outgoing, undirected, or any (default)
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

list of suids of selected nodes, including original selection

**Examples**

```
selectFirstNeighbors()
selectFirstNeighbors('outgoing')
selectFirstNeighbors('incoming')
```

---

`selectNodes`*Select Nodes*

---

### Description

Select nodes in the network by SUID, name or other column values.

### Usage

```
selectNodes(nodes, by.col = "SUID", preserve.current.selection = TRUE,  
           network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

nodes	List of node SUIDs, names or other column values
by.col	Node table column to lookup up provide node values. Default is 'SUID'.
preserve.current.selection	boolean Whether to maintain previously selected nodes.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

list of newly selected node SUIDs

### Author(s)

AlexanderPico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

### Examples

```
selectNodes()
```

---

`selectNodesConnectedBySelectedEdges`*Select Nodes Connected By Selected Edges*

---

### Description

Takes currently selected edges and extends the selection to connected nodes, regardless of directionality.

**Usage**

```
selectNodesConnectedBySelectedEdges(network = NULL,
                                     base.url = .defaultBaseUrl)
```

**Arguments**

<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

Lists of SUIDs for currently selected nodes and edges

**Examples**

```
selectNodesConnectedBySelectedEdges()
```

**setBackgroundColorDefault**

*Set Background Color Default*

**Description**

Set the default background color.

**Usage**

```
setBackgroundColorDefault(new.color, style.name = "default",
                        base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.color</code>	Color as hex code, e.g., #FD5903
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setBackgroundColorDefault('#888888')
```

---

setCurrentNetwork	<i>Set current network</i>
-------------------	----------------------------

---

**Description**

Selects the given network as "current"

**Usage**

```
setCurrentNetwork(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	name or uid of the network that you want set as current
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

server response

**Examples**

```
setCurrentNetwork('MyNetwork')
```

---

setCurrentView	<i>Set Current View</i>
----------------	-------------------------

---

**Description**

Set which network view is "current".

**Usage**

```
setCurrentView(network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

network	(optional) Name or SUID of a network or view. The first (presumably only) view associated a network is used if a specific view SUID is not provided.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Takes first (presumably only) view associated with provided network

**Value**

None

**Examples**

```
setCurrentView()
```

---

<code>setEdgeColorBypass</code>	<i>Set Edge Color Bypass</i>
---------------------------------	------------------------------

---

**Description**

Override the color for particular edges.

**Usage**

```
setEdgeColorBypass(edge.names, new.colors, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

<code>edge.names</code>	List of edge names
<code>new.colors</code>	List of hex colors, or single value
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

**Value**

None

**See Also**

[setEdgePropertyBypass](#), [clearEdgePropertyBypass](#)

**Examples**

```
setEdgeColorBypass()
```

---

**setEdgeColorDefault**    *Set Edge Color Default*

---

**Description**

Set the default edge color.

**Usage**

```
setEdgeColorDefault(new.color, style.name = "default",
base.url = .defaultBaseUrl)
```

**Arguments**

new.color	Color as hex code, e.g., #FD5903
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeColorDefault('#FD5903')
```

---

**setEdgeColorMapping**    *Set Edge Color Mapping*

---

**Description**

Map table column values to colors to set the edge color.

**Usage**

```
setEdgeColorMapping(table.column, table.column.values = NULL,
colors = NULL, mapping.type = "c", default.color = NULL,
style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
colors	List of hex colors to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.color	Hex color to set as default
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeColorMapping('score', c(0,5), c('#FFFFFF', '#FF7755'))
```

**setEdgeFontFaceBypass Set Edge Font Face Bypass****Description**

Override the font face for particular edges.

**Usage**

```
setEdgeFontFaceBypass(edge.names, new.fonts, network = NULL,
                      base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
new.fonts	List of font faces, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

## Value

None

## See Also

[setEdgePropertyBypass](#), [clearEdgePropertyBypass](#)

## Examples

```
setEdgeFontFaceBypass()
```

---

### setEdgeFontFaceDefault

*Set Edge Font Face Default*

---

## Description

Set the default edge font.

## Usage

```
setEdgeFontFaceDefault(new.font, style.name = "default",
                      base.url = .defaultBaseUrl)
```

## Arguments

<code>new.font</code>	String specification of font face, style and size, e.g., "SansSerif,plain,12" or "Dialog,plain,10"
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setEdgeFontFaceDefault("Dialog,plain,10")
```

---

`setEdgeFontFaceMapping`

*Set Edge Font Face Mapping*

---

## Description

Sets font face for edge labels.

## Usage

```
setEdgeFontFaceMapping(table.column, table.column.values, fonts,
  mapping.type = "d", default.font = NULL, style.name = "default",
  network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>fonts</code>	List of string specifications of font face, style and size, e.g., c("SansSerif,plain,12", "Dialog,plain,10")
<code>mapping.type</code>	(char) discrete or passthrough (d,p); default is discrete
<code>default.font</code>	String specification of font face, style and size, e.g., "SansSerif,plain,12" or "Dialog,plain,10"
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setEdgeFontFaceMapping("myfonts", c("normal", "small"),
  c("SansSerif,plain,12", "Dialog,plain,10"))
```

---

**setEdgeFontSizeBypass** *Set Edge Font Size Bypass*

---

**Description**

Override the font size for particular edges.

**Usage**

```
setEdgeFontSizeBypass(edge.names, new.sizes, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
new.sizes	List of size values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

**Value**

None

**See Also**

[setEdgePropertyBypass](#), [clearEdgePropertyBypass](#)

**Examples**

```
setEdgeFontSizeBypass()
```

---

**setEdgeFontSizeDefault**

*Set Edge Font Size Default*

---

**Description**

Set the default edge font size.

**Usage**

```
setEdgeFontSizeDefault(new.size, style.name = "default",
                      base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.size</code>	Numeric value for size
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeFontSizeDefault(12)
```

---

**setEdgeFontSizeMapping**

*Set Edge Font Size Mapping*

---

**Description**

Map table column values to sizes to set the edge size.

**Usage**

```
setEdgeFontSizeMapping(table.column, table.column.values = NULL,
                      sizes = NULL, mapping.type = "c", default.size = NULL,
                      style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
sizes	List of size values to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.size	Size value to set as default
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeFontSizeMapping('score', c(0,30), c(35,55))
```

---

setEdgeLabelBypass      *Set Edge Label Bypass*

---

**Description**

Override the label for particular edges.

**Usage**

```
setEdgeLabelBypass(edge.names, new.labels, network = NULL,  
                  base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
new.labels	List of labels, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. ### setEdgeLabelColorBypass

*Set Edge Label Color Bypass*

---

## Description

Override the label color for particular edges.

## Usage

```
setEdgeLabelColorBypass(edge.names, new.colors, network = NULL,  
base.url = .defaultBaseUrl)
```

## Arguments

edge.names	List of edge names
new.colors	List of hex colors, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. setEdgeLabelColorBypass()
```

---

**setEdgeLabelColorDefault**

*Set Edge Label Color Default*

---

**Description**

Set the default edge label color.

**Usage**

```
setEdgeLabelColorDefault(new.color, style.name = "default",
    base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.color</code>	Color as hex code, e.g., #FD5903
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeLabelColorDefault("#FD5903")
```

---

**setEdgeLabelColorMapping**

*Set Edge Label Color Mapping*

---

**Description**

Map table column values to colors to set the edge border color.

**Usage**

```
setEdgeLabelColorMapping(table.column, table.column.values = NULL,  
colors = NULL, mapping.type = "c", default.color = NULL,  
style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>colors</code>	(integer) values between 0 and 255; 0 is invisible
<code>mapping.type</code>	(char) continuous, discrete or passthrough (c,d,p); default is continuous
<code>default.color</code>	Hex color to set as default
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeLabelColorMapping('score', c(0,5), c('#FFFFFF', '#FF7755'))
```

---

setEdgeLabelDefault     *Set Edge Label Default*

---

### Description

Set the default edge label.

### Usage

```
setEdgeLabelDefault(new.label, style.name = "default",
base.url = .defaultBaseUrl)
```

### Arguments

new.label	String label for unmapped edges.
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
setEdgeLabelDefault('unknown')
```

---

setEdgeLabelMapping     *Set Edge Label Mapping*

---

### Description

Pass the values from a table column to display as edge labels.

### Usage

```
setEdgeLabelMapping(table.column, style.name = "default",
network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

table.column	Name of Cytoscape table column to map values from
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeLabelMapping('label')
```

---

```
setEdgeLabelOpacityBypass
```

*Set Edge Label Opacity Bypass*

---

**Description**

Override the label opacity for particular edges.

**Usage**

```
setEdgeLabelOpacityBypass(edge.names, new.value, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
new.value	List of opacity values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

**Examples**

```
setEdgeLabelOpacityBypass()
```

---

**setEdgeLabelOpacityDefault**

*Set Edge Label Opacity Default*

---

**Description**

Set default opacity value for all unmapped edge labels.

**Usage**

```
setEdgeLabelOpacityDefault(new.opacity, style.name = "default",
                           base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.opacity</code>	Numeric values between 0 and 255; 0 is invisible.
<code>style.name</code>	Name of style; default is "default" style.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeLabelOpacityDefault(50)
```

---

**setEdgeLabelOpacityMapping**

*Set Edge Label Opacity Mapping*

---

**Description**

Sets opacity for edge label only.

**Usage**

```
setEdgeLabelOpacityMapping(table.column, table.column.values = NULL,
                           opacities = NULL, mapping.type = "c", default.opacity = NULL,
                           style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>opacities</code>	(integer) values between 0 and 255; 0 is invisible
<code>mapping.type</code>	(char) continuous, discrete or passthrough (c,d,p); default is continuous
<code>default.opacity</code>	Opacity value to set as default for all unmapped values
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape. port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeLabelOpacityMapping ('weight', c(1,10), c(50,255))
```

`setEdgeLineStyleBypass`

*Set Edge Line Style Bypass*

**Description**

Override the style for particular edges.

**Usage**

```
setEdgeLineStyleBypass(edge.names, new.styles, network = NULL,
                      base.url = .defaultBaseUrl)
```

**Arguments**

<code>edge.names</code>	List of edge names
<code>new.styles</code>	List of style values, or single value
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

**Value**

None

**See Also**

[setEdgePropertyBypass](#), [clearEdgePropertyBypass](#)

**Examples**

```
setEdgeLineStyleBypass()
```

---

**setEdgeLineStyleDefault**

*Set Edge Line Style Default*

---

**Description**

Set the default edge style.

**Usage**

```
setEdgeLineStyleDefault(new.line.style, style.name = "default",
                      base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.line.style</code>	Name of line style, e.g., SOLID, LONG_DASH, etc (see <a href="#">getLineStyles</a> )
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeLineStyleDefault('LONG_DASH')
```

---

`setEdgeLineStyleMapping`

*Set Edge Line Style Mapping*

---

## Description

Map table column values to styles to set the edge style.

## Usage

```
setEdgeLineStyleMapping(table.column, table.column.values, line.styles,  
default.line.style = "SOLID", style.name = "default",  
network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>line.styles</code>	List of line styles. See <a href="#">getLineStyles</a> .
<code>default.line.style</code>	Style to set as default. See <a href="#">getLineStyles</a> .
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setEdgeLineStyleMapping('type',c('pp','pd'),c('SOLID','LONG_DASH'))
```

---

**setEdgeLineWidthBypass**

*Set Edge Line Width Bypass*

---

**Description**

Override the width for particular edges.

**Usage**

```
setEdgeLineWidthBypass(edge.names, new.widths, network = NULL,  
                      base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
new.widths	List of width values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

**Value**

None

**See Also**

[setEdgePropertyBypass](#), [clearEdgePropertyBypass](#)

**Examples**

```
setEdgeLineWidthBypass()
```

---

```
setEdgeLineWidthDefault  
Set Edge Line Width Default
```

---

## Description

Set the default edge width.

## Usage

```
setEdgeLineWidthDefault(new.width, style.name = "default",  
                      base.url = .defaultBaseUrl)
```

## Arguments

<code>new.width</code>	Numeric value for width
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setEdgeLineWidthDefault(3)
```

---

```
setEdgeLineWidthMapping  
Set Edge Line Width Mapping
```

---

## Description

Map table column values to widths to set the edge line width.

## Usage

```
setEdgeLineWidthMapping(table.column, table.column.values = NULL,  
                       widths = NULL, mapping.type = "c", default.width = NULL,  
                       style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
widths	List of width values to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.width	Width value to set as default for all unmapped values for all unmapped values.
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeLineWidthMapping('score', c(0,30), c(1,5))
```

---

setEdgeOpacityBypass    *Set Edge Opacity Bypass*

---

**Description**

Override the opacity for particular edges.

**Usage**

```
setEdgeOpacityBypass(edge.names, new.values, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
new.values	List of values to set, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the edge or edges specified. This method ultimately calls the generic function, [setEdgePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

setEdgeOpacityBypass()
```

---

### `setEdgeOpacityDefault` *Set Edge Opacity Default*

---

## Description

Set default opacity value for all unmapped edges.

## Usage

```
setEdgeOpacityDefault(new.opacity, style.name = "default",
                      base.url = .defaultBaseUrl)
```

## Arguments

<code>new.opacity</code>	Numeric values between 0 and 255; 0 is invisible.
<code>style.name</code>	Name of style; default is "default" style.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setEdgeOpacityDefault(50)
```

---

**setEdgeOpacityMapping** *Set Edge Opacity Mapping*

---

**Description**

Map table column values to opacities to set the edge opacity.

**Usage**

```
setEdgeOpacityMapping(table.column, table.column.values = NULL,  
                      opacities = NULL, mapping.type = "c", default.opacity = NULL,  
                      style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
opacities	(integer) values between 0 and 255; 0 is invisible
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.opacity	Opacity value to set as default for all unmapped values
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeOpacityMapping ('weight', c(1,10), c(50,255))
```

---

**setEdgePropertyBypass** *Set Edge Property Bypass*

---

## Description

Set bypass values for any edge property of the specified edges, overriding default values and mappings defined by any visual style.

## Usage

```
setEdgePropertyBypass(edge.names, new.values, visual.property,  
                      bypass = TRUE, network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>edge.names</code>	List of edge names
<code>new.values</code>	List of values to set, or single value
<code>visual.property</code>	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
<code>bypass</code>	Whether to set permanent bypass value. Default is TRUE.
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for the visual properties of the edge or edges specified. To restore defaults and mappings, use [clearEdgePropertyBypass](#).

## Examples

```
setEdgePropertyBypass()
```

---

```
setEdgeSelectionColorDefault
    Set Edge Selection Color Default
```

---

### Description

Set the default selected edge color.

### Usage

```
setEdgeSelectionColorDefault(new.color, style.name = "default",
    base.url = .defaultBaseUrl)
```

### Arguments

new.color	Color as hex code, e.g., #FD5903
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
setEdgeSelectionColorDefault('#FD5903')
```

---

```
setEdgeSourceArrowColorBypass
    Set Edge Source Arrow Color Bypass
```

---

### Description

Override the source arrow color for particular edges.

### Usage

```
setEdgeSourceArrowColorBypass(edge.names, new.colors, network = NULL,
    base.url = .defaultBaseUrl)
```

**Arguments**

<code>edge.names</code>	List of edge names
<code>new.colors</code>	List of hex colors, or single value
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

`setEdgeSourceArrowColorDefault`  
*Set Edge Source Arrow Color Default*

**Description**

Set the default edge source arrow color.

**Usage**

```
setEdgeSourceArrowColorDefault(new.color, style.name = "default",
  base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.color</code>	Color as hex code, e.g., #FD5903
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeSourceArrowColorDefault('#FD5903')
```

---

```
setEdgeSourceArrowColorMapping
```

*Set Edge Source Arrow Color Mapping*

---

**Description**

Map table column values to colors to set the source arrow color.

**Usage**

```
setEdgeSourceArrowColorMapping(table.column, table.column.values = NULL,  
    colors = NULL, mapping.type = "c", default.color = NULL,  
    style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
colors	List of hex colors to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.color	Hex color to set as default
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setEdgeSourceArrowColorMapping('score', c(0,5), c('#FFFFFF', '#FF7755'))
```

---

`setEdgeSourceArrowMapping`

*Set Edge Source Arrow Mapping*

---

## Description

Map table column values to shapes to set the source arrow shape.

## Usage

```
setEdgeSourceArrowMapping(table.column, table.column.values, shapes,  
    default.shape = "ARROW", style.name = "default", network = NULL,  
    base.url = .defaultBaseUrl)
```

## Arguments

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>shapes</code>	List of shapes to map to table.column.values. See <a href="#">getArrowShapes</a>
<code>default.shape</code>	Shape to set as default. See <a href="#">getArrowShapes</a>
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setEdgeSourceArrowMapping('type',c('activation','inhibition'),c('ARROW','T'))
```

---

`setEdgeSourceArrowShapeBypass`

*Set Edge Source Arrow Shape Bypass*

---

## Description

Override the source arrow shape for particular edges.

**Usage**

```
setEdgeSourceArrowShapeBypass(edge.names, new.shapes, network = NULL,  
    base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
new.shapes	List of shapes, or single value. See <a href="#">getArrowShapes</a> .
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

---

**setLayoutProperties** *Set Layout Properties*

---

**Description**

Sets the specified properties for the specified layout. Unmentioned properties are left unchanged.

**Usage**

```
setLayoutProperties(layout.name, properties.list,
                     base.url = .defaultBaseUrl)
```

**Arguments**

```
layout.name      (character) Name of the layout
properties.list  (list) List of one or more property=value pairs
base.url        (optional) Ignore unless you need to specify a custom domain, port or version
                to connect to the CyREST API. Default is http://localhost:1234 and the latest
                version of the CyREST API supported by this version of RCy3.
```

**Details**

Run [getLayoutNames](#) to list available layouts. Run [getLayoutPropertyNames](#) to list properties per layout.

**Value**

None

**Author(s)**

Alexander Pico, Tanja Muetze, Georgi Kolishovski, Paul Shannon

**Examples**

```
setLayoutProperties('force-directed', list(defaultSpringLength=50, defaultSpringCoefficient=6E-04))
# Successfully updated the property 'defaultSpringLength'.
# Successfully updated the property 'defaultSpringCoefficient'.
```

---

**setNetworkCenterBypass**

*Set Network Center Bypass*

---

**Description**

Set the bypass value for center x and y for the network. This function could be used to pan and scroll the Cytoscape canvas.

**Usage**

```
setNetworkCenterBypass(x, y, bypass = FALSE, network = NULL,
                      base.url = .defaultBaseUrl)
```

**Arguments**

x	Coordinate value, increases going to the right.
y	Coordinate value, increase going down.
bypass	Whether to set permanent bypass value. Default is FALSE per common use of temporary center settings.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.

**base.url** (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values for this visual property. This method ultimately calls the generic function, [setNetworkPropertyBypass](#), which can be used to set any visual property. To restore defaults, use [clearNetworkPropertyBypass](#).

## Value

None

## See Also

[setNetworkPropertyBypass](#), [clearNetworkPropertyBypass](#)

## Examples

```
setNetworkCenterBypass()
```

---

**setNetworkPropertyBypass**

*Set Network Property Bypass*

---

## Description

Set bypass values for any network property, overriding default values defined by any visual style.

## Usage

```
setNetworkPropertyBypass(new.value, visual.property, bypass = TRUE,
                        network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<b>new.value</b>	Value to set
<b>visual.property</b>	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
<b>bypass</b>	Whether to set permanent bypass value. Default is TRUE.
<b>network</b>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<b>base.url</b>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for the visual properties of the node or nodes specified. To restore defaults and mappings, use [clearNodePropertyBypass](#).

## Value

None

## See Also

[clearNetworkPropertyBypass](#)

## Examples

```
setNetworkPropertyBypass()
```

---

setNetworkZoomBypass    *Set Network Zoom Bypass*

---

## Description

Set the bypass value for scale factor for the network.

## Usage

```
setNetworkZoomBypass(new.value, bypass = FALSE, network = NULL,  
base.url = .defaultBaseUrl)
```

## Arguments

new.value	Zoom factor
bypass	Whether to set permanent bypass value. Default is FALSE per common use of temporary zoom settings.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values for this visual property. This method ultimately calls the generic function, [setNetworkPropertyBypass](#), which can be used to set any visual property. To restore defaults, use [clearNetworkPropertyBypass](#).

---

`setNodeBorderColorBypass`

*Set Node Border Color Bypass*

---

## Description

Override the border color for particular nodes.

## Usage

```
setNodeBorderColorBypass(node.names, new.colors, network = NULL,  
base.url = .defaultBaseUrl)
```

## Arguments

<code>node.names</code>	List of node names
<code>new.colors</code>	List of hex colors, or single value
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

## Value

None

## See Also

[setNodePropertyBypass](#), [clearNodePropertyBypass](#)

## Examples

```
setNodeBorderColorBypass('Node 1', '#FF55AA')
setNodeBorderColorBypass(c('Node 1','Node 2'), '#FF55AA')
clearNodePropertyBypass(c('Node 1','Node 2'), 'NODE_BORDER_PAINT')
```

---

### setNodeBorderColorDefault

*Set Node Border Color Default*

---

## Description

Set the default node border color.

## Usage

```
setNodeBorderColorDefault(new.color, style.name = "default",
                        base.url = .defaultBaseUrl)
```

## Arguments

new.color	Color as hex code, e.g., #FD5903
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeBorderColorDefault('#FD5903')
```

---

### setNodeBorderColorMapping

*Set Node Border Color Mapping*

---

## Description

Map table column values to colors to set the node border color.

## Usage

```
setNodeBorderColorMapping(table.column, table.column.values = NULL,
                          colors = NULL, mapping.type = "c", default.color = NULL,
                          style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
colors	(integer) values between 0 and 255; 0 is invisible
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.color	Hex color to set as default
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeBorderColorMapping('score', c(0,5), c('#FFFFFF', '#FF7755'))
```

**setNodeBorderOpacityBypass**

*Set Node Border Opacity Bypass*

**Description**

Override the border opacity for particular nodes.

**Usage**

```
setNodeBorderOpacityBypass(node.names, new.values, network = NULL,
                           base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
new.values	List of values to set, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#).

## Value

None

## See Also

[setNodePropertyBypass](#), [clearNodePropertyBypass](#)

## Examples

```
setNodeBorderOpacityDefault()
```

---

### setNodeBorderOpacityDefault

*Set Node Border Opacity Default*

---

## Description

Set defaults opacity value for all unmapped node borders.

## Usage

```
setNodeBorderOpacityDefault(new.opacity, style.name = "default",
                           base.url = .defaultBaseUrl)
```

## Arguments

<code>new.opacity</code>	Numeric values between 0 and 255; 0 is invisible.
<code>style.name</code>	Name of style; default is "default" style.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeBorderOpacityDefault(50)
```

---

```
setNodeBorderOpacityMapping
    Set Node Border Opacity Mapping
```

---

## Description

Sets opacity for node border only.

## Usage

```
setNodeBorderOpacityMapping(table.column, table.column.values = NULL,
                           opacities = NULL, mapping.type = "c", default.opacity = NULL,
                           style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>opacities</code>	(integer) values between 0 and 255; 0 is invisible
<code>mapping.type</code>	(char) continuous, discrete or passthrough (c,d,p); default is continuous
<code>default.opacity</code>	Opacity value to set as default for all unmapped values
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeBorderOpacityMapping('score', c(-5,5), c(50,255))
```

---

**setNodeBorderWidthBypass**

*Set Node Border Width Bypass*

---

**Description**

Override the border width for particular nodes.

**Usage**

```
setNodeBorderWidthBypass(node.names, new.sizes, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
new.sizes	List of size values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

**Value**

None

**See Also**

[setNodePropertyBypass](#), [clearNodePropertyBypass](#)

**Examples**

```
setNodeBorderWidthBypass('Node 1', 5)  
setNodeBorderWidthBypass(c('Node 1','Node 2'), 5)  
clearNodePropertyBypass(c('Node 1','Node 2'), 'NODE_BORDER_WIDTH')
```

---

**setNodeBorderWidthDefault**

*Set Node Border Width Default*

---

**Description**

Set the default node border width.

**Usage**

```
setNodeBorderWidthDefault(new.width, style.name = "default",
    base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.width</code>	Numeric value for width
<code>style.name</code>	Name of style; default is "default" style.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeBorderWidthDefault(2)
```

---

**setNodeBorderWidthMapping**

*Set Node Border Width Mapping*

---

**Description**

Map table column values to widths to set the node border width.

**Usage**

```
setNodeBorderWidthMapping(table.column, table.column.values = NULL,
    widths = NULL, mapping.type = "c", default.width = NULL,
    style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
widths	List of width values to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.width	Width value to set as default for all unmapped values
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeBorderWidthMapping('score', c(0,30), c(1,5))
```

---

setNodeColorBypass      *Set Node Color Bypass*

---

**Description**

Set the bypass value for fill color for the specified node or nodes.

**Usage**

```
setNodeColorBypass(node.names, new.colors, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
new.colors	List of hex colors, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

## Value

None

## See Also

setNodeColorDirect ('node1', '#FF0088')
setNodeColorDirect (c('node1', 'node2'), c('#88FF88', '#FF0088'))
clearNodePropertyBypass(c('Node 1','Node 2'), 'NODE_FILL_COLOR')
```

**setNodeColorDefault**     *Set Node Color Default*

## Description

Set the default node color.

## Usage

```
setNodeColorDefault(new.color, style.name = "default",
base.url = .defaultBaseUrl)
```

## Arguments

<code>new.color</code>	Color as hex code, e.g., #FD5903
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeColorDefault('#FD5903')
```

---

setNodeColorMapping     *Set Node Color Mapping*

---

## Description

Map table column values to colors to set the node fill color.

## Usage

```
setNodeColorMapping(table.column, table.column.values = NULL,  
                   colors = NULL, mapping.type = "c", default.color = NULL,  
                   style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
colors	List of hex colors to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.color	Hex color to set as default
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeColorMapping('score', c(-5,0,5), c('#5577FF', '#FFFFFF', '#FF7755'))
```

---

setNodeComboOpacityMapping     *Set Node Combo Opacity Mapping*

---

## Description

Sets opacity for node fill, border and label all together.

**Usage**

```
setNodeComboOpacityMapping(table.column, table.column.values = NULL,
  opacities = NULL, mapping.type = "c", default.opacity = NULL,
  style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
opacities	(integer) values between 0 and 255; 0 is invisible
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.opacity	Opacity value to set as default for all unmapped values
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeComboOpacityMapping('score', c(-5,5), c(50,255))
```

**setNodeCustomBarChart** *Set Node Custom Bar Chart*

**Description**

Makes a bar chart per node using specified node table columns by setting a default custom graphic style.

**Usage**

```
setNodeCustomBarChart(columns, type = "GROUPED", colors = NULL,
  range = NULL, orientation = "VERTICAL", colAxis = FALSE,
  rangeAxis = FALSE, zeroLine = FALSE, axisWidth = 0.25,
  axisColor = "#000000", axisFontSize = 1, separation = 0,
  slot = 1, style.name = "default", base.url = .defaultBaseUrl)
```

**Arguments**

columns	List of node column names to be displayed, in order.
type	Type of bar chart: GROUPED (default), STACKED, HEAT_STRIPS, or UP_DOWN
colors	(optional) List of colors to be matched with columns or with range, depending on type. Default is a set of colors from an appropriate Brewer palette.
range	(optional) Min and max values of chart. Default is to use min and max from specified data columns.
orientation	(optional) HORIZONTAL or VERTICAL (default).
colAxis	(optional) Show axis with column labels. Default is FALSE.
rangeAxis	(optional) Show axis with range of values. Default is FALSE.
zeroLine	(optional) Show a line at zero. Default is FALSE.
axisWidth	(optional) Width of axis lines, if shown. Default is 0.25.
axisColor	(optional) Color of axis lines, if shown. Default is black.
axisFontSize	(optional) Font size of axis labels, if shown. Default is 1.
separation	(optional) Distance between bars. Default is 0.0.
slot	(optional) Which custom graphics slot to modify. Slots 1-9 are available for independent charts, gradients and images. Default is 1.
style.name	(optional) Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**[setNodeCustomPosition](#), [removeNodeCustomGraphics](#)**Examples**

```
setNodeCustomBarChart(c("data1", "data2", "data3"))
```

---

```
setNodeCustomBoxChart Set Node Custom Box Chart
```

---

**Description**

Makes a box chart per node using specified node table columns by setting a default custom graphic style.

**Usage**

```
setNodeCustomBoxChart(columns, colors = NULL, range = NULL,
                      orientation = "VERTICAL", rangeAxis = FALSE, zeroLine = FALSE,
                      axisWidth = 0.25, axisColor = "#000000", axisFontSize = 1,
                      slot = 1, style.name = "default", base.url = .defaultBaseUrl)
```

**Arguments**

columns	List of node column names to be displayed.
colors	(optional) List of colors to be matched with columns or with range, depending on type. Default is a set of colors from an appropriate Brewer palette.
range	(optional) Min and max values of chart. Default is to use min and max from specified data columns.
orientation	(optional) HORIZONTAL or VERTICAL (default).
rangeAxis	(optional) Show axis with range of values. Default is FALSE.
zeroLine	(optional) Show a line at zero. Default is FALSE.
axisWidth	(optional) Width of axis lines, if shown. Default is 0.25.
axisColor	(optional) Color of axis lines, if shown. Default is black.
axisFontSize	(optional) Font size of axis labels, if shown. Default is 1.
slot	(optional) Which custom graphics slot to modify. Slots 1-9 are available for independent charts, gradients and images. Default is 1.
style.name	(optional) Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

---

**Description**

Makes a pie chart per node using specified node table columns by setting a default custom graphic style.

**Usage**

```
setNodeCustomPieChart(columns, colors = NULL, startAngle = 0,
                      slot = 1, style.name = "default", base.url = .defaultBaseUrl)
```

**Arguments**

columns	List of node column names to be displayed.
colors	(optional) List of colors to be matched with columns or with range, depending on type. Default is a set of colors from an appropriate Brewer palette.
startAngle	(optional) Angle to start filling pie. Default is 0.0.
slot	(optional) Which custom graphics slot to modify. Slots 1-9 are available for independent charts, gradients and images. Default is 1.
style.name	(optional) Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

[setNodeCustomPosition](#), [removeNodeCustomGraphics](#)

**Examples**

```
setNodeCustomPieChart(c("data1", "data2", "data3"))
```

---

**setNodeCustomPosition** *Set Node Custom Position*

---

**Description**

Adjust the position of a custom graphic relative to its node.

**Usage**

```
setNodeCustomPosition(nodeAnchor = "C", graphicAnchor = "C",
                      justification = "c", xOffset = 0, yOffset = 0, slot = 1,
                      style.name = "default", base.url = .defaultBaseUrl)
```

**Arguments**

nodeAnchor	Position on node to place the graphic: NW,N,NE,E,SE,S,SW,W or C for center (default)
graphicAnchor	Position on graphic to place on node: NW,N,NE,E,SE,S,SW,W or C for center (default)
justification	Positioning of content within graphic: l,r,c (default)
xOffset	Additional offset in the x direction
yOffset	Additional offset in the y direction
slot	(optional) Which custom graphics slot to modify. Slots 1-9 are available for independent charts, gradients and images. Default is 1.
style.name	(optional) Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeCustomPosition()
```

**setNodeCustomRadialGradient***Set Node Custom Radial Gradient***Description**

Makes a gradient fill per node by setting a default custom graphic style.

**Usage**

```
setNodeCustomRadialGradient(colors = c("#DDDDDD", "#888888"),
  anchors = c(0, 1), xCenter = 0.5, yCenter = 0.5, slot = 1,
  style.name = "default", base.url = .defaultBaseUrl)
```

**Arguments**

colors	(optional) List of colors to define gradient
anchors	(optional) Position of colors from 0.0 to 1.0.
xCenter	(optional) X position for center of radial effect from 0.0 to 1.0. Default is 0.5.
yCenter	(optional) Y position for center of radial effect from 0.0 to 1.0. Default is 0.5.
slot	(optional) Which custom graphics slot to modify. Slots 1-9 are available for independent charts, gradients and images. Default is 1.
style.name	(optional) Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeCustomRadialGradient()
```

**setNodeCustomRingChart***Set Node Custom Ring Chart***Description**

Makes a ring chart per node using specified node table columns by setting a default custom graphic style.

**Usage**

```
setNodeCustomRingChart(columns, colors = NULL, startAngle = 0,
  holeSize = 0.5, slot = 1, style.name = "default",
  base.url = .defaultBaseUrl)
```

**Arguments**

columns	List of node column names to be displayed.
colors	(optional) List of colors to be matched with columns or with range, depending on type. Default is a set of colors from an appropriate Brewer palette.
startAngle	(optional) Angle to start filling ring Default is 0.0.
holeSize	(optional) Size of hole in ring. Ranges 0-1. Default is 0.5.
slot	(optional) Which custom graphics slot to modify. Slots 1-9 are available for independent charts, gradients and images. Default is 1.
style.name	(optional) Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**See Also**

[setNodeCustomPosition](#), [removeNodeCustomGraphics](#)

**Examples**

```
setNodeCustomRingChart(c("data1", "data2", "data3"))
```

---

**setNodeFillOpacityBypass**

*Set Node Fill Opacity Bypass*

---

**Description**

Override the fill opacity for particular nodes.

**Usage**

```
setNodeFillOpacityBypass(node.names, new.values, network = NULL,
  base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	List of node names
<code>new.values</code>	List of values to set, or single value
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

**Value**

None

**See Also**

[setNodePropertyBypass](#), [clearNodePropertyBypass](#)

**Examples**

```
setNodeFillOpacityBypass('Node 1', 100)
setNodeFillOpacityBypass(c('Node 1','Node 2'), 100)
clearNodePropertyBypass(c('Node 1','Node 2'), 'NODE_TRANSPARENCY')
```

**setNodeFillOpacityDefault**

*Set Node Fill Opacity Default*

**Description**

Set default opacity value for all unmapped nodes.

**Usage**

```
setNodeFillOpacityDefault(new.opacity, style.name = "default",
                         base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.opacity</code>	Numeric values between 0 and 255; 0 is invisible.
<code>style.name</code>	Name of style; default is "default" style.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeFillOpacityDefault(50)
```

---

```
setNodeFillOpacityMapping
```

*Set Node Fill Opacity Mapping*

---

**Description**

Sets opacity for node fill only.

**Usage**

```
setNodeFillOpacityMapping(table.column, table.column.values = NULL,  
    opacities = NULL, mapping.type = "c", default.opacity = NULL,  
    style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
opacities	(integer) values between 0 and 255; 0 is invisible
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.opacity	Opacity value to set as default for all unmapped values
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeFillOpacityMapping('score', c(-5,5), c(50,255))
```

---

**setNodeFontFaceBypass** *Set Node Font Face Bypass*

---

**Description**

Override the font face for particular nodes.

**Usage**

```
setNodeFontFaceBypass(node.names, new.fonts, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	List of node names
<code>new.fonts</code>	List of font faces, or single value
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#).

**Value**

**Examples**

```
setNodeFontFaceBypass()
```

---

**setNodeFontFaceDefault**

*Set Node Font Face Default*

---

**Description**

Set the default node font.

**Usage**

```
setNodeFontFaceDefault(new.font, style.name = "default",
                      base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.font</code>	String specification of font face, style and size, e.g., "SansSerif,plain,12" or "Dialog,plain,10"
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is <code>http://localhost:1234</code> and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeFontFaceDefault("Dialog,plain,10")
```

---

**setNodeFontFaceMapping**

*Set Node Font Face Mapping*

---

**Description**

Sets font face for node labels.

**Usage**

```
setNodeFontFaceMapping(table.column, table.column.values, fonts,
                      mapping.type = "d", default.font = NULL, style.name = "default",
                      network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
fonts	List of string specifications of font face, style and size, e.g., c("SansSerif,plain,12", "Dialog,plain,10")
mapping.type	(char) discrete or passthrough (d,p); default is discrete
default.font	String specification of font face, style and size, e.g., "SansSerif,plain,12" or "Dialog,plain,10"
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeFontFaceMapping("myfonts", c("normal", "small"),
c("SansSerif,plain,12", "Dialog,plain,10"))
```

**setNodeFontSizeBypass** *Set Node Font Size Bypass*

**Description**

Override the font size for particular nodes.

**Usage**

```
setNodeFontSizeBypass(node.names, new.sizes, network = NULL,
base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
new.sizes	List of size values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. ```

---

## setNodeFontSizeDefault

*Set Node Font Size Default*

---

## Description

Set the default node font size.

## Usage

```
setNodeFontSizeDefault(new.size, style.name = "default",
                      base.url = .defaultBaseUrl)
```

## Arguments

<code>new.size</code>	Numeric value for size
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeFontSizeDefault(12)
```

---

`setNodeFontSizeMapping`

*Set Node Font Size Mapping*

---

## Description

Map table column values to sizes to set the node size.

## Usage

```
setNodeFontSizeMapping(table.column, table.column.values = NULL,  
                      sizes = NULL, mapping.type = "c", default.size = NULL,  
                      style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>sizes</code>	List of size values to map to <code>table.column.values</code>
<code>mapping.type</code>	(char) continuous, discrete or passthrough (c,d,p); default is continuous
<code>default.size</code>	Size value to set as default
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeFontSizeMapping('score', c(0,30), c(35,55))
```

---

setNodeHeightBypass      *Set Node Height Bypass*

---

## Description

Override the height for particular nodes.

## Usage

```
setNodeHeightBypass(node.names, new.heights, network = NULL,  
base.url = .defaultBaseUrl)
```

## Arguments

node.names	List of node names
new.heights	List of height values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. clearNodePropertyBypass(c('Node 1','Node 2'), 'NODE_HEIGHT')
```

---

`setNodeHeightDefault`    *Set Node Height Default*

---

## Description

Set the default node height.

## Usage

```
setNodeHeightDefault(new.height, style.name = "default",
                     base.url = .defaultBaseUrl)
```

## Arguments

<code>new.height</code>	Numeric value for height.
<code>style.name</code>	Name of style; default is "default" style.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeHeightDefault(35)
```

---

`setNodeHeightMapping`    *Set Node Height Mapping*

---

## Description

Map table column values to the node heights.

## Usage

```
setNodeHeightMapping(table.column, table.column.values = NULL,
                     heights = NULL, mapping.type = "c", default.height = NULL,
                     style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
heights	List of height values to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.height	Size value to set as default
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeHeightMapping('score', c(0,30), c(35,55))
```

```

## setNodeLabelColorBypass

*Set Node Label Color Bypass*

## Description

Override the label color for particular nodes.

## Usage

```
setNodeLabelColorBypass(node.names, new.colors, network = NULL,
base.url = .defaultBaseUrl)
```

## Arguments

node.names	List of node names
new.colors	List of hex colors, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. ```

---

**setNodeLabelColorDefault**

*Set Node Label Color Default*

---

**Description**

Set the default node label color.

**Usage**

```
setNodeLabelColorDefault(new.color, style.name = "default",
base.url = .defaultBaseUrl)
```

**Arguments**

new.color	Color as hex code, e.g., #FD5903
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeLabelColorDefault('#FD5903')
```

---

```
setNodeLabelColorMapping
    Set Node Label Color Mapping
```

---

## Description

Map table column values to colors to set the node border color.

## Usage

```
setNodeLabelColorMapping(table.column, table.column.values = NULL,
  colors = NULL, mapping.type = "c", default.color = NULL,
  style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>colors</code>	(integer) values between 0 and 255; 0 is invisible
<code>mapping.type</code>	(char) continuous, discrete or passthrough (c,d,p); default is continuous
<code>default.color</code>	Hex color to set as default
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeLabelColorMapping('score', c(0,5), c('#FFFFFF', '#FF7755'))
```

---

setNodeLabelDefault     *Set Node Label Default*

---

### Description

Set the default node label.

### Usage

```
setNodeLabelDefault(new.label, style.name = "default",
base.url = .defaultBaseUrl)
```

### Arguments

new.label	String label for unmapped nodes.
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
setNodeLabelDefault('unknown')
```

---

setNodeLabelMapping     *Set Node Label Mapping*

---

### Description

Pass the values from a table column to display as node labels.

### Usage

```
setNodeLabelMapping(table.column, style.name = "default",
network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

table.column	Name of Cytoscape table column to map values from
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeLabelMapping('name')
```

---

**setNodeLabelOpacityBypass**

*Set Node Label Opacity Bypass*

---

**Description**

Override the label opacity for particular nodes.

**Usage**

```
setNodeLabelOpacityBypass(node.names, new.values, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
new.values	List of values to set, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

---

**setNodeLabelOpacityMapping**

*Set Node Label Opacity Mapping*

---

**Description**

Sets opacity for node label only.

**Usage**

```
setNodeLabelOpacityMapping(table.column, table.column.values = NULL,
                           opacities = NULL, mapping.type = "c", default.opacity = NULL,
                           style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

**table.column** Name of Cytoscape table column to map values from  
**table.column.values** List of values from Cytoscape table to be used in mapping  
**opacities** (integer) values between 0 and 255; 0 is invisible  
**mapping.type** (char) continuous, discrete or passthrough (c,d,p); default is continuous  
**default.opacity** Opacity value to set as default for all unmapped values  
**style.name** Name of style; default is "default" style  
**network** (optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.  
**base.url** (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeLabelOpacityMapping('score', c(-5,5), c(50,255))
```

**setNodeOpacityBypass** *Set Node Opacity Bypass*

**Description**

Set the bypass value for node fill, label and border opacity for the specified node or nodes.

**Usage**

```
setNodeOpacityBypass(node.names, new.values, network = NULL,
                     base.url = .defaultBaseUrl)
```

**Arguments**

**node.names** List of node names  
**new.values** List of values to set, or single value  
**network** (optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.  
**base.url** (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodeOpacityBypass](#), see examples.

## Value

None

## See Also

[setNodePropertyBypass](#), [clearNodeOpacityBypass](#)

## Examples

```
setNodeOpacityBypass('Node 1', 100)
setNodeOpacityBypass(c('Node 1','Node 2'), 100)
clearNodeOpacityBypass(c('Node 1','Node 2'))
```

---

**setNodePropertyBypass** *Set Node Property Bypass*

---

## Description

Set bypass values for any node property of the specified nodes, overriding default values and mappings defined by any visual style.

## Usage

```
setNodePropertyBypass(node.names, new.values, visual.property,
                      bypass = TRUE, network = NULL, base.url = .defaultBaseUrl)
```

## Arguments

node.names	List of node names
new.values	List of values to set, or single value
visual.property	Name of a visual property. See <a href="#">getVisualPropertyNames</a> .
bypass	Whether to set permanent bypass value. Default is TRUE.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for the visual properties of the node or nodes specified. To restore defaults and mappings, use [clearNodePropertyBypass](#).

### Value

None

### See Also

[clearNodePropertyBypass](#)

### Examples

```
setNodePropertyBypass()
```

---

`setNodeSelectionColorDefault`  
*Set Node Selection Color Default*

---

## Description

Set the default selection node color.

### Usage

```
setNodeSelectionColorDefault(new.color, style.name = "default",
    base.url = .defaultBaseUrl)
```

### Arguments

<code>new.color</code>	Color as hex code, e.g., #FD5903
<code>style.name</code>	(optional) Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
setNodeSelectionColorDefault('#FD5903')
```

---

setNodeShapeBypass      *Set Node Shape Bypass*

---

## Description

Override the shape for particular nodes.

## Usage

```
setNodeShapeBypass(node.names, new.shapes, network = NULL,  
base.url = .defaultBaseUrl)
```

## Arguments

node.names	List of node names
new.shapes	List of shapes, or single value. See <a href="#">getNodeShapes</a> .
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

## Value

None

## See Also

[setNodePropertyBypass](#), [clearNodePropertyBypass](#)

```
setNodeShapeBypass('Node 1', 'ROUND_RECTANGLE')  
setNodeShapeBypass(c('Node 1', 'Node 2'), 'ROUND_RECTANGLE')  
clearNodePropertyBypass(c('Node 1', 'Node 2'), 'NODE_SHAPE')
```

---

**setNodeShapeDefault**    *Set Node Shape Default*

---

## Description

Set the default node shape.

## Usage

```
setNodeShapeDefault(new.shape, style.name = "default",
base.url = .defaultBaseUrl)
```

## Arguments

<code>new.shape</code>	Name of shape, e.g., ELLIPSE, RECTANGLE, etc (see <a href="#">getNodeShapes</a> )
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeShapeDefault('ELLIPSE')
```

---

**setNodeShapeMapping**    *Set Node Shape Mapping*

---

## Description

Map table column values to shapes to set the node shape.

## Usage

```
setNodeShapeMapping(table.column, table.column.values, shapes,
default.shape = NULL, style.name = "default", network = NULL,
base.url = .defaultBaseUrl)
```

**Arguments**

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
shapes	List of shapes to map to table.column.values. See <a href="#">getNodeShapes</a>
default.shape	Shape to set as default. See <a href="#">getNodeShapes</a>
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeShapeMapping('type',c('protein','dna'),c('ELLIPSE','RECTANGLE'))
```

**setNodeSizeBypass**      *Set Node Size Bypass*

**Description**

Sets the bypass value of node size for one or more nodes. Only applicable if node dimensions are locked. See [lockNodeDimensions](#).

**Usage**

```
setNodeSizeBypass(node.names, new.sizes, network = NULL,
                  base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
new.sizes	List of size values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

## Value

None

## See Also

[setNodePropertyBypass](#), [clearNodePropertyBypass](#)

## Examples

```
setNodeSizeBypass('Node 1', 35)
setNodeSizeBypass(c('Node 1','Node 2'), 35)
clearNodePropertyBypass(c('Node 1','Node 2'), 'NODE_SIZE')
```

`setNodeSizeDefault`      *Set Node Size Default*

## Description

Set the default node size.

## Usage

```
setNodeSizeDefault(new.size, style.name = "default",
  base.url = .defaultBaseUrl)
```

## Arguments

<code>new.size</code>	Numeric value for size
<code>style.name</code>	Name of style; default is "default" style.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeSizeDefault(35)
```

---

```
setNodeSizeMapping      Set Node Size Mapping
```

---

### Description

Map table column values to node font sizes.

### Usage

```
setNodeSizeMapping(table.column, table.column.values = NULL,  
                  sizes = NULL, mapping.type = "c", default.size = NULL,  
                  style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

table.column	Name of Cytoscape table column to map values from
table.column.values	List of values from Cytoscape table to be used in mapping
sizes	List of font size values to map to table.column.values
mapping.type	(char) continuous, discrete or passthrough (c,d,p); default is continuous
default.size	Size value to set as default
style.name	Name of style; default is "default" style
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
setNodeSizeMapping('score', c(0,30), c(35,55))
```

---

```
setNodeTooltipBypass  Set Node Tooltip Bypass
```

---

### Description

Sets a bypass tooltip for one or more nodes

### Usage

```
setNodeTooltipBypass(node.names, new.tooltip, network = NULL,  
                     base.url = .defaultBaseUrl)
```

**Arguments**

<code>node.names</code>	List of node names
<code>new.tooltip</code>	List of tooltips, or a single tooltip
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

**Examples**

```
setNodeTooltipBypass('Node 1', 'This is an important node.')
```

**setNodeTooltipDefault *Set Node Tooltip Default*****Description**

Set the default node tooltip

**Usage**

```
setNodeTooltipDefault(new.tooltip, style.name = "default",
                     base.url = .defaultBaseUrl)
```

**Arguments**

<code>new.tooltip</code>	String tooltip for unmapped nodes.
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeTooltipDefault('unknown')
```

---

`setNodeTooltipMapping` *Set Node Tooltip Mapping*

---

**Description**

Pass the values from a table column to display as node tooltips.

**Usage**

```
setNodeTooltipMapping(table.column, style.name = "default",
                      network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeTooltipMapping('description')
```

---

**setNodeWidthBypass**      *Set Node Width Bypass*

---

**Description**

Override the width for particular nodes.

**Usage**

```
setNodeWidthBypass(node.names, new.widths, network = NULL,  
base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
new.widths	List of width values, or single value
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method permanently overrides any default values or mappings defined for this visual property of the node or nodes specified. This method ultimately calls the generic function, [setNodePropertyBypass](#), which can be used to set any visual property. To restore defaults and mappings, use [clearNodePropertyBypass](#), see examples.

**Value**

None

**See Also**

setNodeWidthBypass('Node 1', 35)  
setNodeWidthBypass(c('Node 1', 'Node 2'), 35)  
clearNodePropertyBypass(c('Node 1', 'Node 2'), 'NODE_WIDTH')
```

---

setNodeWidthDefault     *Set Node Width Default*

---

## Description

Set the default node width.

## Usage

```
setNodeWidthDefault(new.width, style.name = "default",
base.url = .defaultBaseUrl)
```

## Arguments

new.width	Numeric value for width.
style.name	Name of style; default is "default" style.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setNodeWidthDefault(35)
```

---

setNodeWidthMapping     *Set Node Width Mapping*

---

## Description

Map table column values to the node widths.

## Usage

```
setNodeWidthMapping(table.column, table.column.values = NULL,
widths = NULL, mapping.type = "c", default.width = NULL,
style.name = "default", network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

<code>table.column</code>	Name of Cytoscape table column to map values from
<code>table.column.values</code>	List of values from Cytoscape table to be used in mapping
<code>widths</code>	List of width values to map to <code>table.column.values</code>
<code>mapping.type</code>	(char) continuous, discrete or passthrough (c,d,p); default is continuous
<code>default.width</code>	Size value to set as default
<code>style.name</code>	Name of style; default is "default" style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
setNodeWidthMapping('score', c(0,30), c(35,55))
```

`setStyleDependencies`    *Set Style Dependencies*

**Description**

Sets the values of dependencies in a style, overriding any prior settings.

**Usage**

```
setStyleDependencies(style.name = "default", dependencies,
base.url = .defaultBaseUrl)
```

**Arguments**

<code>style.name</code>	Name of style; default is "default" style
<code>dependencies</code>	A list of style dependencies, see Available Dependencies below. Note: each dependency is set by a boolean, TRUE or FALSE (T or F)
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

server response

## Available Dependencies

arrowColorMatchesEdge nodeCustomGraphicsSizeSync nodeSizeLocked

## Examples

```
setStyleDependencies("myStyle", list(nodeSizeLocked=TRUE))
```

---

```
setVisualPropertyDefault
```

*Set Visual Property Default*

---

## Description

Set the default value for a visual property.

## Usage

```
setVisualPropertyDefault(style.string, style.name = "default",
                        base.url = .defaultBaseUrl)
```

## Arguments

style.string	A named list including "visualProperty" and "value"
style.name	Name of style; default is "default" style
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Value

None

## Examples

```
setVisualPropertyDefault(list(visualProperty = "NODE_SIZE", value = 35))
```

<code>setVisualStyle</code>	<i>Set Visual Style</i>
-----------------------------	-------------------------

### Description

Apply a visual style to a network.

### Usage

```
setVisualStyle(style.name, network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

<code>style.name</code>	Name of a visual style
<code>network</code>	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Value

None

### Examples

```
setVisualStyle()
```

<code>syncNodeCustomGraphicsSize</code>	<i>Sync Node Custom Graphics Size</i>
---	---------------------------------------

### Description

Set a boolean value to have the size of custom graphics match that of the node.

### Usage

```
syncNodeCustomGraphicsSize(new.state, style.name = "default",
                           base.url = .defaultBaseUrl)
```

### Arguments

<code>new.state</code>	(Boolean) Whether to sync node custom graphics size
<code>style.name</code>	Name of style; default is "default" style
<code>base.url</code>	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
syncNodeCustomGraphicsSize(TRUE)
```

---

**toggleGraphicsDetails** *Toggle Graphics Details*

---

**Description**

Regardless of the current zoom level and network size, show (or hide) graphics details, e.g., node labels.

**Usage**

```
toggleGraphicsDetails(base.url = .defaultBaseUrl)
```

**Arguments**

**base.url** (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

Displaying graphics details on a very large network will affect pan and zoom performance, depending on your available RAM. See [cytoscapeMemoryStatus](#).

**Value**

None

**Examples**

```
showGraphicsDetails(TRUE)
```

---

`unhideAll`*Unhide All*

---

### Description

Unhide all previously hidden nodes and edges, by clearing the Visible property bypass value.

### Usage

```
unhideAll(network = NULL, base.url = .defaultBaseUrl)
```

### Arguments

`network` (optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.

`base.url` (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

### Details

This method sets node and edge visibility bypass to true, overriding any defaults or mappings. Pending CyREST updates, this method will ultimately call the generic function, [clearEdgePropertyBypass](#), which can be used to clear any visual property.

### Value

None

### See Also

[clearEdgePropertyBypass](#), [unhideNodes](#) [unhideEdges](#)

### Examples

```
unhideAll()
```

---

`unhideEdges`*Unhide Edges*

---

### Description

Unhide specified edges that were previously hidden, by clearing the Visible property bypass value.

### Usage

```
unhideEdges(edge.names, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

edge.names	List of edge names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method ultimately calls the generic function, [clearEdgePropertyBypass](#), which can be used to clear any visual property.

**Value**

None

**See Also**

[clearEdgePropertyBypass](#), [unhideAll](#)

**Examples**

```
unhideEdges()
```

---

unhideNodes

*Unhide Nodes*

---

**Description**

Unhide specified nodes that were previously hidden, by clearing the Node Visible property bypass value.

**Usage**

```
unhideNodes(node.names, network = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

node.names	List of node names
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Details**

This method ultimately calls the generic function, [clearNodePropertyBypass](#), which can be used to clear any visual property.

```

---

uninstallApp

*Uninstall App*

---

#### **Description**

Uninstall an app from Cytoscape.

#### **Usage**

```
uninstallApp(app, base.url = .defaultBaseUrl)
```

#### **Arguments**

app	Name of app
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

#### **Value**

None

#### **Examples**

```
uninstallApp()
```

---

`updateApp`*Update App*

---

**Description**

Update a Cytoscape app to the latest available version.

**Usage**

```
updateApp(app, base.url = .defaultBaseUrl)
```

**Arguments**

app	Name of app
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

None

**Examples**

```
updateApp()
```

---

`updateNetworkInNDEx`*Update Network In NDEx*

---

**Description**

Update an existing network in NDEx, given a previously associated Cytoscape network, e.g., previously exported to NDEx or imported from NDEx.

**Usage**

```
updateNetworkInNDEx(username, password, isPublic, network = NULL,  
                     metadata = NULL, base.url = .defaultBaseUrl)
```

**Arguments**

username	NDEx account username
password	NDEx account password
isPublic	(Boolean) Whether to make the network publicly accessible at NDEx.
network	(optional) Name or SUID of the network. Default is the "current" network active in Cytoscape.
metadata	(optional) A list of structured information describing the network

**base.url** (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

NDEx identifier (`externalId`) for the updated submission

**Examples**

```
updateNetworkInNDEx("user", "pass", TRUE)
```

**updateStyleDefaults**     *Updates the default values of visual properties in a style*

**Description**

Updates visual property defaults, overriding any prior settings. See `mapVisualProperty` for the list of visual properties.

**Usage**

```
updateStyleDefaults(style.name, defaults, base.url = .defaultBaseUrl)
```

**Arguments**

**style.name** (char) name for style  
**defaults** (list) a list of visual property default settings  
**base.url** (optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

**Value**

server response

**See Also**

**Examples**

```
updateStyleDefaults('myStyle',list('node fill color'='#0000FF','node size'=50))
```

---

updateStyleMapping      *Updates a visual property mapping in a style*

---

## Description

Updates the visual property mapping, overriding any prior mapping. Creates a visual property mapping if it doesn't already exist in the style.

## Usage

```
updateStyleMapping(style.name, mapping, base.url = .defaultBaseUrl)
```

## Arguments

style.name	(char) name for style
mapping	a single visual property mapping, see mapVisualProperty
base.url	(optional) Ignore unless you need to specify a custom domain, port or version to connect to the CyREST API. Default is http://localhost:1234 and the latest version of the CyREST API supported by this version of RCy3.

## Details

Requires visual property mappings to be previously created, see mapVisualProperty.

## Value

server response

## See Also
