

# Package ‘semisup’

July 10, 2025

**Version** 1.32.0

**Title** Semi-Supervised Mixture Model

**Description** Implements a parametric semi-supervised mixture model. The permutation test detects markers with main or interactive effects, without distinguishing them. Possible applications include genome-wide association analysis and differential expression analysis.

**bioViews** SNP, GenomicVariation, SomaticMutation, Genetics,  
Classification, Clustering, DNaseq, Microarray,  
MultipleComparison

**Depends** R (>= 3.0.0)

**Imports** VGAM

**Suggests** knitr, testthat, SummarizedExperiment

**VignetteBuilder** knitr

**License** GPL-3

**LazyData** true

**RoxygenNote** 7.0.0

**URL** <https://github.com/rauschenberger/semisup>

**BugReports** <https://github.com/rauschenberger/semisup/issues>

**git\_url** <https://git.bioconductor.org/packages/semisup>

**git\_branch** RELEASE\_3\_21

**git\_last\_commit** 2559836

**git\_last\_commit\_date** 2025-04-15

**Repository** Bioconductor 3.21

**Date/Publication** 2025-07-09

**Author** Armin Rauschenberger [aut, cre]

**Maintainer** Armin Rauschenberger <[armin.rauschenberger@uni.lu](mailto:armin.rauschenberger@uni.lu)>

semisup-package      *Semi-supervised mixture model*

### Description

This R package implements the semi-supervised mixture model. Use `mixtura` for model fitting, and `scrutor` for hypothesis testing.

### Getting started

Please type the following commands:

```
utils::vignette("semisup")
?semisup::mixtura
?semisup::scrutor
```

### More information

A Rauschenberger, RX Menezes, MA van de Wiel, NM van Schoor, and MA Jonker (2020). "Semi-supervised mixture test for detecting markers associated with a quantitative trait", *Manuscript in preparation*.

<[a.rauschenberger@vumc.nl](mailto:a.rauschenberger@vumc.nl)>

---

arguments	<i>Documentation</i>
-----------	----------------------

---

## Description

This page lists and describes all arguments of the R package [semisup](#).

## Arguments

y	<b>observations:</b> numeric vector of length n
Y	<b>observations:</b> numeric vector of length n, or numeric matrix with n rows (samples) and q columns (variables)
z	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
Z	<b>class labels:</b> numeric vector of length n, or numeric matrix with n rows (samples) and p columns (variables), with entries 0 and NA
dist	distributional assumption: character "norm" (Gaussian), "nbinom" (negative binomial), or "zinb" (zero-inflated negative binomial)
phi	dispersion parameters: numeric vector of length q, or NULL
pi	zero-inflation parameter(s): numeric vector of length q, or NULL
gamma	offset: numeric vector of length n, or NULL
test	resampling procedure: character "perm" (permutation) or "boot" (parametric bootstrap), or NULL
iter	(maximum) number of resampling iterations : positive integer, or NULL
kind	resampling accuracy: numeric between 0 and 1, or NULL; all p-values above kind are approximate
starts	restarts of the EM algorithm: positive integer (defaults to 1)
it.em	(maximum) number of iterations in the EM algorithm: positive integer (defaults to 100)
epsilon	convergence criterion for the EM algorithm: non-negative numeric (defaults to 1e-04)
debug	verification of arguments: TRUE or FALSE
pass	parameters for parametric bootstrap algorithm
...	settings EM algorithm: starts, it.em and epsilon (see <a href="#">arguments</a> )

## See Also

Use [mixtura](#) for model fitting, and [scrutor](#) for hypothesis testing. All other functions of the R package [semisup](#) are [internal](#).

**debug***Internal function*

## Description

This function verifies whether the arguments fulfill some formal requirements.

## Usage

```
debug(y, z, dist, phi, pi, gamma, test, iter, kind, ...)
```

## Arguments

y	<b>observations:</b> numeric vector of length n
z	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
dist	<b>distributional assumption:</b> character "norm" (Gaussian), "nbinom" (negative binomial), or "zinb" (zero-inflated negative binomial)
phi	<b>dispersion parameters:</b> numeric vector of length q, or NULL
pi	<b>zero-inflation parameter(s):</b> numeric vector of length q, or NULL
gamma	<b>offset:</b> numeric vector of length n, or NULL
test	<b>resampling procedure:</b> character "perm" (permutation) or "boot" (parametric bootstrap), or NULL
iter	(maximum) number of resampling iterations : positive integer, or NULL
kind	resampling accuracy: numeric between 0 and 1, or NULL; all p-values above kind are approximate
...	settings EM algorithm: starts, it.em and epsilon (see <a href="#">arguments</a> )

## Details

If one or more entries of z are equal to 1, the mixture model can be fitted but not tested. Accordingly, kind is replaced by NULL.

Resampling-based testing cannot reach p-values below 1/iter. If kind is smaller than 1/iter, it is replaced by 0.

## Value

This function returns warnings and errors. It also returns kind (see details).

## See Also

This is an [internal](#) function. The user functions are [mixtura](#) and [scrutor](#).

## Examples

```
NULL
```

---

`estim.nbinom`*Internal function*

---

## Description

These functions estimate the parameters of the (zero-inflated) negative binomial distribution by applying the maximum likelihood method to the labelled observations in class 0.

## Usage

```
estim.nbinom(y, z, gamma)  
estim.zinb(y, z, gamma)
```

## Arguments

y	<b>observations:</b> numeric vector of length n
z	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
gamma	<b>offset:</b> numeric vector of length n, or NULL

## Value

These functions return a list of numerics.

## See Also

These are [internal](#) functions. The user functions are [mixtura](#) and [scrutor](#).

## Examples

```
# data simulation  
n <- 100  
y <- stats::rnbinom(n=n,mu=5,size=1/0.05)  
y[sample(1:n,size=0.2*n)] <- 0  
z <- rep(0,times=n)  
gamma <- rep(1,times=n)  
  
# parameter estimation  
estim.nbinom(y,z,gamma)  
estim.zinb(y,z,gamma)
```

**fit.nbinom***Internal function*

## Description

This function fits the semi-supervised negative binomial mixture model. It is called by **fit.wrap**.

## Usage

```
fit.nbinom(y, z, phi, gamma, it.em, epsilon)
```

## Arguments

<b>y</b>	<b>observations:</b> numeric vector of length n
<b>z</b>	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
<b>phi</b>	dispersion parameters: numeric vector of length q, or NULL
<b>gamma</b>	offset: numeric vector of length n, or NULL
<b>it.em</b>	(maximum) number of iterations in the EM algorithm: positive integer (defaults to 100)
<b>epsilon</b>	convergence criterion for the EM algorithm: non-negative numeric (defaults to 1e-04)

## Value

This function returns the parameter estimates, the posterior probabilities, and the likelihood.

## See Also

This is an **internal** function. The user functions are **mixtura** and **scrutor**.

## Examples

```
# data simulation
n <- 100
z <- rep(0:1,each=n/2)
gamma <- runif(n=n,min=0,max=2)
y <- rnbinom(n=n,mu=gamma*(5+2*z),size=1/0.05)
z[(n/4):n] <- NA

# model fitting
fit.nbinom(y,z,phi=0.05,gamma=gamma,
it.em=100,epsilon=1e-04)
```

---

**fit.norm***Internal function*

---

## Description

This function fits the semi-supervised Gaussian mixture model. It is called by [fit.wrap](#).

## Usage

```
fit.norm(y, z, it.em, epsilon)
```

## Arguments

y	<b>observations:</b> numeric vector of length n
z	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
it.em	(maximum) number of iterations in the EM algorithm: positive integer (defaults to 100)
epsilon	convergence criterion for the EM algorithm: non-negative numeric (defaults to 1e-04)

## Value

This function returns the parameter estimates, the posterior probabilities, and the likelihood.

## See Also

This is an [internal](#) function. The user functions are [mixtura](#) and [scrutor](#).

## Examples

```
# data simulation
n <- 100
z <- rep(0:1,each=n/2)
y <- rnorm(n=n,mean=2*z,sd=1)
z[(n/4):n] <- NA

# model fitting
fit.norm(y,z,it.em=100,epsilon=1e-04)
```

**fit.wrap***Internal function*

## Description

This function fits the semi-supervised mixture model multiple times. It is called by [mixtura](#) and [scrutor](#).

## Usage

```
fit.wrap(y, z, dist, phi, pi, gamma, starts = 1, it.em = 100, epsilon = 1e-04)
```

## Arguments

<b>y</b>	<b>observations:</b> numeric vector of length n
<b>z</b>	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
<b>dist</b>	<b>distributional assumption:</b> character "norm" (Gaussian), "nbinom" (negative binomial), or "zinb" (zero-inflated negative binomial)
<b>phi</b>	<b>dispersion parameters:</b> numeric vector of length q, or NULL
<b>pi</b>	<b>zero-inflation parameter(s):</b> numeric vector of length q, or NULL
<b>gamma</b>	<b>offset:</b> numeric vector of length n, or NULL
<b>starts</b>	<b>restarts of the EM algorithm:</b> positive integer (defaults to 1)
<b>it.em</b>	(maximum) number of iterations in the EM algorithm: positive integer (defaults to 100)
<b>epsilon</b>	convergence criterion for the EM algorithm: non-negative numeric (defaults to 1e-04)

## Details

The distributions are parametrised as follows:

- Gaussian  
 $y \sim N(\text{mean}, \text{sd}^2)$   
 $E[y] = \text{mean}$   
 $\text{Var}[y] = \text{sd}^2$
- Negative binomial  
 $y \sim NB(\mu, \phi)$   
 $E[y] = \mu$   
 $\text{Var}[y] = \mu + \phi * \mu^2$
- Zero-inflated negative binomial  
 $y \sim ZINB(\mu, \phi, \pi)$   
 $E[y] = (1-\pi) * \mu$

## Value

This function returns the parameter estimates, the posterior probabilities, and the likelihood.

posterior	probability of belonging to class 1: numeric vector of length n
converge	path of the log-likelihood: numeric vector with maximum length it.em
estim0	parameter estimates under H0: data frame
estim1	parameter estimates under H1: data frame
loglik0	log-likelihood under H0: numeric
loglik1	log-likelihood under H1: numeric
lrts	likelihood-ratio test statistic: positive numeric

## See Also

This is an [internal](#) function. The user functions are [mixtura](#) and [scrutor](#).

## Examples

```
# data simulation
n <- 100
z <- rep(0:1,each=n/2)
y <- rnorm(n=n,mean=2*z,sd=1)
z[(n/4):n] <- NA

# model fitting
fit.wrap(y,z,dist="norm")
```

**fit.zinb**

*Internal function*

## Description

This function fits the semi-supervised zero-inflated negative binomial mixture model. It is called by [fit.wrap](#).

## Usage

```
fit.zinb(y, z, phi, pi, gamma, it.em, epsilon)
```

## Arguments

y	<b>observations:</b> numeric vector of length n
z	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
phi	dispersion parameters: numeric vector of length q, or NULL
pi	zero-inflation parameter(s): numeric vector of length q, or NULL

<code>gamma</code>	offset: numeric vector of length <code>n</code> , or <code>NULL</code>
<code>it.em</code>	(maximum) number of iterations in the EM algorithm: positive integer (defaults to 100)
<code>epsilon</code>	convergence criterion for the EM algorithm: non-negative numeric (defaults to <code>1e-04</code> )

## Value

This function returns the parameter estimates, the posterior probabilities, and the likelihood.

## See Also

This is an `internal` function. The user functions are `mixtura` and `scrutor`.

## Examples

```
# data simulation
n <- 100
z <- rep(0:1,each=n/2)
gamma <- runif(n=n,min=0,max=2)
y <- rnb(n=n,mu=gamma*(5+2*z),size=1/0.05)
y[sample(1:n,size=0.2*n)] <- 0
z[(n/4):n] <- NA

# model fitting
fit.zinb(y,z,phi=0.05,pi=0.2,gamma=gamma,
it.em=100,epsilon=1e-04)
```

## Description

This page lists and describes some internal functions of the R package `semisup`. These functions should not be used for analysing data.

- `fit.wrap` multiple restarts
- `fit.norm` Gaussian mixture model
- `fit.nbinom` negative binomial mixture model
- `fit.zinb` zero-inflated negative binomial mixture model
- `estim.nbinom` dispersion estimation
- `estim.zinb` dispersion and zero-inflation estimation
- `resam.lrts` resampling (bootstrap, permutation)

## See Also

Use `mixtura` for model fitting, and `scrutor` for hypothesis testing.

---

mixtura*Model fitting*

---

**Description**

This function fits a semi-supervised mixture model. It simultaneously estimates two mixture components, and assigns the unlabelled observations to these.

**Usage**

```
mixtura(y, z, dist = "norm",
        phi = NULL, pi = NULL, gamma = NULL,
        test = NULL, iter = 100, kind = 0.05,
        debug = TRUE, ...)
```

**Arguments**

y	<b>observations:</b> numeric vector of length n
z	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
dist	distributional assumption: character "norm" (Gaussian), "nbinom" (negative binomial), or "zinb" (zero-inflated negative binomial)
phi	dispersion parameters: numeric vector of length q, or NULL
pi	zero-inflation parameter(s): numeric vector of length q, or NULL
gamma	offset: numeric vector of length n, or NULL
test	resampling procedure: character "perm" (permutation) or "boot" (parametric bootstrap), or NULL
iter	(maximum) number of resampling iterations : positive integer, or NULL
kind	resampling accuracy: numeric between 0 and 1, or NULL; all p-values above kind are approximate
debug	verification of arguments: TRUE or FALSE
...	settings EM algorithm: starts, it.em and epsilon (see <a href="#">arguments</a> )

**Details**

By default, phi and pi are estimated by the maximum likelihood method, and gamma is replaced by a vector of ones.

**Value**

This function fits and compares a one-component ( $H_0$ ) and a two-component ( $H_1$ ) mixture model.

posterior	probability of belonging to class 1: numeric vector of length n
converge	path of the log-likelihood: numeric vector with maximum length it.em
estim0	parameter estimates under $H_0$ : data frame

estim1	parameter estimates under H1: data frame
loglik0	log-likelihood under H0: numeric
loglik1	log-likelihood under H1: numeric
lrts	likelihood-ratio test statistic: positive numeric
p.value	H0 versus H1: numeric between 0 and 1, or NULL

## Reference

A Rauschenberger, RX Menezes, MA van de Wiel, NM van Schoor, and MA Jonker (2020). "Semi-supervised mixture test for detecting markers associated with a quantitative trait", *Manuscript in preparation*.

## See Also

Use [scrutor](#) for hypothesis testing. All other functions are [internal](#).

## Examples

```
# data simulation
n <- 100
z <- rep(0:1,each=n/2)
y <- rnorm(n=n,mean=2,sd=1)
z[(n/4):n] <- NA

# model fitting
mixtura(y,z,dist="norm",test="perm")
```

resam.lrts

*Internal function*

## Description

This function resamples the data, fits the semi-supervised mixture model, and returns the likelihood ratio test statistic. It is called by [mixtura](#).

## Usage

```
resam.lrts(y, z, dist, phi, pi, gamma, test, pass, ...)
```

## Arguments

y	<b>observations:</b> numeric vector of length n
z	<b>class labels:</b> integer vector of length n, with entries 0, 1 and NA
dist	distributional assumption: character "norm" (Gaussian), "nbinom" (negative binomial), or "zinb" (zero-inflated negative binomial)

phi	dispersion parameters: numeric vector of length q, or NULL
pi	zero-inflation parameter(s): numeric vector of length q, or NULL
gamma	offset: numeric vector of length n, or NULL
test	resampling procedure: character "perm" (permutation) or "boot" (parametric bootstrap), or NULL
pass	parameters for parametric bootstrap algorithm
...	settings EM algorithm: starts, it.em and epsilon (see <a href="#">arguments</a> )

**Value**

This function returns a numeric.

**See Also**

This is an [internal](#) function. The user functions are [mixtura](#) and [scrutor](#).

**Examples**

```
# data simulation
n <- 100
z <- rep(0:1,each=n/2)
y <- rnorm(n=n,mean=2*z,sd=1)
z[(n/4):n] <- NA

# observed test statistic
fit.wrap(y=y,z=z,dist="norm")$lrts

# simulated test statistic
resam.lrts(y=y,z=z,dist="norm",
           phi=NULL,pi=NULL,gamma=NULL,
           test="perm",pass=NULL)
```

**Description**

This function tests whether the unlabelled observations come from a mixture of two distributions.

**Usage**

```
scrutor(Y, Z, dist = "norm",
       phi = NULL, pi = NULL, gamma = NULL,
       test = "perm", iter = NULL, kind = NULL,
       debug = TRUE, ...)
```

## Arguments

Y	<b>observations:</b> numeric vector of length n, or numeric matrix with n rows (samples) and q columns (variables)
Z	<b>class labels:</b> numeric vector of length n, or numeric matrix with n rows (samples) and p columns (variables), with entries 0 and NA
dist	<b>distributional assumption:</b> character "norm" (Gaussian), "nbinom" (negative binomial), or "zinb" (zero-inflated negative binomial)
phi	<b>dispersion parameter(s):</b> numeric vector of length q, or NULL (norm: none, nbinom: MLE)
pi	<b>zero-inflation parameter(s):</b> numeric vector of length q, or NULL (norm: none,nbinom: MLE)
gamma	<b>offset:</b> numeric vector of length n, or NULL
test	<b>resampling procedure:</b> character "perm" (permutation) or "boot" (parametric bootstrap), or NULL
iter	(maximum) number of resampling iterations : positive integer, or NULL
kind	<b>resampling accuracy:</b> numeric between 0 and 1, or NULL; all p-values above kind are approximate
debug	verification of arguments: TRUE or FALSE
...	settings EM algorithm: starts, it.em and epsilon (see <a href="#">arguments</a> )

## Details

By default, phi and pi are estimated by the maximum likelihood method, and gamma is replaced by a vector of ones.

## Value

This function tests a one-component ( $H_0$ ) against a two-component mixture model ( $H_1$ ).

y	index observations
z	index class labels
lrts	test statistic
p.value	p-value

## Reference

## See Also

Use [mixtura](#) for model fitting. All other functions are [internal](#).

**Examples**

```
# data simulation
n <- 100
z <- rep(0:1,each=n/2)
y <- rnorm(n=n,mean=2*z,sd=1)
z[(n/4):n] <- NA

# hypothesis testing
scrutor(y,z,dist="norm")
```

---

**table***Table***Description**

This dataset includes tables for the approximate mixture test (**not yet available**).

**Usage**

```
data(table)
```

**Format**

A list of numeric vectors.

**Value**

All entries are numeric.

---

**toydata***Toydata***Description**

This dataset allows to reproduce the examples shown in the vignette.

**Usage**

```
data(toydata)
```

**Format**

A list of numeric vectors and matrices.

**Value**

All entries are numeric.
