# Package 'MCOE'

November 11, 2025

Type Package

**Title** Creates New Folders and Loads Standard Practices for Monterey County Office of Education

Version 0.6.0

**Description** Basic Setup for Projects in R for Monterey County Office of Education. It contains functions often used in the analysis of education data in the county office including seeing if an item is not in a list, rounding in the manner the general public expects, including logos for districts, switching between district names and their county-district-school codes, accessing the local 'SQL' table and making thematically consistent graphs.

BugReports https://github.com/dobrowski/MCOE/issues

**Depends** R (>= 4.1.0)

**Imports** DBI, dplyr, forcats, ggplot2, ggthemes, googlesheets4, keyring, magick, odbc, scales

**Suggests** testthat (>= 3.0.0)

Config/testthat/edition 3

**Encoding UTF-8** 

LazyData true

RoxygenNote 7.3.3

NeedsCompilation no

Description

When using the MCOE 'SQL' tables, it will merge codebook descriptions from CDE

# Usage

```
left_join_codebook(df, tablename, field)
```

## **Arguments**

df local dataframe you want to append labels to

tablename which 'SQL' table is the data from

field which field in the table do you want the labels for

#### Value

An 'tibble' of the same type as '.data'. The output has an one column names 'definition' which contains labels for the passed argument 'field'.

# **Examples**

```
try(
sbac.filtered <- tbl(con, "CAASPP") |>
head(100) |>
collect() |>
left_join_codebook("CAASPP", "Subgroup_ID")
)
```

lollipop 3

| 10 | 1  | 1 | i | n | റ | n |
|----|----|---|---|---|---|---|
|    | ,_ | _ | _ | ν | v | μ |

Graphing function to make lollipop bar graphs

## **Description**

Graphing function to make lollipop bar graphs

# Usage

```
lollipop(df, y_var, x_var, colorme)
```

#### **Arguments**

df dataframe source to graph

 $y_var$  variable for Y  $x_var$  variable for X

colorme color to make the bars

#### Value

a 'ggplot' class graph with horiztontal bars with circles at the end of the bars

# **Examples**

```
library(dplyr)
df.example <- dplyr::tribble(~name, ~rate, "Nina",32,"David",65)
lollipop(df = df.example, x_var = name, y_var = rate, colorme = "pink" )</pre>
```

 $mcoe\_d\_logo$ 

Given a CDS code, adds the district logo

# Description

Given a CDS code, adds the district logo

#### Usage

```
mcoe_d_logo(cds.number)
```

# **Arguments**

cds.number

County-District-School code from California Department of Education

4 mcoe\_logo\_location

#### Value

'mcoe\_d\_logo' an object of class 'magick-image' from [magick::image\_read()] which is an image file of the district logo

# **Examples**

```
try(mcoe_d_logo("27659870000000"))
```

mcoe\_logo

Adds the MCOE logo

## **Description**

Adds the MCOE logo

## Usage

```
mcoe_logo()
```

#### Value

'mcoe\_logo' an object of class 'magick-image' from [magick::image\_read()] which is an image file of the MCOE logo

# **Examples**

```
mcoe_logo()
```

 ${\tt mcoe\_logo\_location}$ 

Given a CDS code it provides the logo

# Description

Given a CDS code it provides the logo

# Usage

```
mcoe_logo_location(cds.number)
```

## **Arguments**

cds.number

County-District-School code from California Department of Education

# Value

'mcoe\_logo\_location' returns a 'string' containing a file location the district logo

mcoe\_name 5

#### **Examples**

```
mcoe_logo_location("27659870000000")
```

mcoe\_name

Given a CDS code, it gives the name of the district

# Description

Given a CDS code, it gives the name of the district

# Usage

```
mcoe_name(cds.number)
```

## **Arguments**

cds.number

County-District-School code from California Department of Education

#### Value

a 'string' of the district name

# **Examples**

```
mcoe_name("27661590000000")
```

mcoe\_sql\_con

Connects to the MCOE 'SQL' tables

# Description

Connects to the MCOE 'SQL' tables

# Usage

```
mcoe_sql_con()
```

# Value

a database connection in the form of [DBI::dbConnect]

# **Examples**

```
try(mcoe_sql_con())
```

6 mry.dist

 $mcoe\_theme$ 

Modifies ggplots to use a common theme

## **Description**

Modifies ggplots to use a common theme

## Usage

mcoe\_theme

#### **Format**

An object of class theme (inherits from ggplot2::theme, gg, S7\_object) of length 16.

#### Value

a 'list' of [ggplot] elements to add to a graph

## **Examples**

```
library(dplyr)
df.example <- dplyr::tribble(~name, ~rate, "Nina",32,"David",65)
g <- ggplot2::ggplot(df.example, ggplot2::aes(name, rate)) + ggplot2::geom_col()
g + mcoe_theme</pre>
```

mry.dist

School District Directory

# **Description**

A subset of data from California Department of Education identifying schools

## Usage

```
mry.dist
```

#### **Format**

## 'mry.dist' A data frame with 256 rows and 50 columns:

**District** District name **School** School name

CDScode County, District, School code ...

#### **Source**

<a href="https://www.cde.ca.gov/ds/si/ds/pubschls.asp">https://www.cde.ca.gov/ds/si/ds/pubschls.asp</a>

round2 7

round2

Rounding the way most people do it with .5 roudning up

# Description

Rounding the way most people do it with .5 roudning up

## Usage

```
round2(x, digits = 2)
```

## **Arguments**

x number to be roundeddigits how many digits to round to

## Value

'round2' returns a truncated 'numeric' with decimal places equal to 'digits' argument

# Examples

```
x <- 1.2345 round2(x, digits = 2)
```

%notin%

MCOE The inverse of \_in\_ where the list is excluded

## **Description**

MCOE The inverse of \_in\_ where the list is excluded

## Usage

```
x %notin% table
```

# **Arguments**

x Item or list to look at

table List to make sure it is not part of

# Value

4

8 %notin%

# Examples

```
fruit <- c("apple", "banana", "pear", "pineapple")
"kiwi" %notin% fruit</pre>
```
